It makes two distinct contracts where the parties make but one. The duty to deliver at the terminus imposes upon the consignee the corresponding duty of receiving the goods at the same place. The freight has been carried, and if further duty or responsibility is imposed upon the bailee it should only be upon a new consideration and under a new contract, express or implied; but within the decision, the bailee, having performed his duty as carrier, for which he receives an agreed compensation, is subjected, at the option of the consignee, to a further liability under a different bailment. The consignee who receives his goods at the platform, on their arrival, but performs his obligation, and has had the full benefit of the contract of the carrier, and yet a negligent consignee not performing his contract is entitled to exact a further service from the carrier, and this simply to the end that the liability of the bailee as carrier may cease at the earliest possible moment, and by a strict construction of the contract in his behalf, or rather by a construction complicated and against the interests of the consignee. A more simple interpretation, and one to my mind more reasonable and more in accordance with the analogies of law, would be to call the contract one of carriage simply and not contemplating storage, and that the contract was to be reasonably performed by both parties; the carrier to deliver upon reasonable request, and at reasonable hours; the consignee to call for and receive his goods as soon as reasonably could be, in accordance with the usage of the place and the nature of the merchandise. If the property is not taken away by the consignee within a reasonable time, then the carrier may relieve himself from further liability by storing it in a suitable place, at the risk and expense of the owner or consignee. The transit in such case, and the liability of the carrier, would cease after the owner or consignee should and might have taken his property.

The circumstances of this case were peculiar, and it would have been unreasonable to require the lady who owned this baggage to demand it on the evening of its arrival at Buffalo, under the penalty of discharging the carrier from responsibility for its safe keeping. It is doubtful whether any female would have had physical strength to succeed, in that crowd, in obtaining possession of a parcel, and no one was called upon to undertake it at the peril of her person and the risk of her health. It was quite late in an inclement night, at the time of the arrival of the trains, and the plaintiff was unable to continue her journey east, as she had expected to do, by reason of the failure of the defendant and its associates to make their running time. These passenger trains arrived at the same time, carrying an unusual crowd of passengers, and a corresponding accumulation of baggage, so much so that the usual places for storing baggage were entirely insufficient for the purpose. It took until nearly twelve o'clock at night to dispose of the baggage. The car in which Miss Bedell was a passenger was excluded from the car house, for want of room, and she very prudently went directly from the car to a hotel, retaining the defendant's check as her voucher for her baggage. This part of the case was properly disposed of at the circuit, and the judgment must be affirmed.

Bridge over Galveston Channel.

We learn from the Galveston *News*, that the railroad bridge over Galveston Channel, between Galveston and Virginia Point, has been completed, and that two locomotives, each with a train of ten freight, and two passenger cars passed over it on the 1st ult. The *News* says:

Our channel, which was the only barrier to the trade and travel from all parts of the State, has finally been spanned by a bridge—the longest bridge in the United States. The consummation of this great enterprise constitutes an era in the history of our city and its commerce that will long be remembered. Heretofore we have been isolated, and the growth and prosperity of our city have only resulted from great natural advantages, and in spite of obstacles that would have rendered almost any other place a barren waste. This bridge opens a bright and auspicious future before us. It will entirely revolutionize our commerce, relieving transportation from more than half their previous burdens in charges, and saving three-fourths of the time heretofore consumed.

Decision against the City of Pittsburg.

In the Supreme Court of Pennsylvania, in the case of Hamilton against the city of Pittsburg, on two bonds issued by the Chartiers Valley Railroad, and guarantied by the city, a decision was rendered, concluding as follows:

That the defendants and their successors in office be and they are hereby commanded forthwith, to make full and ample provision for the payment of all the interest now due upon the bonds issued by the Mayor, Aldermen and citizens of Pittsburg, in payment of their subscriptions of $150,000 to the capital stock of the Chartiers Valley Railroad Company, according to the tenor of said bonds, by the assessment and collection of such taxes as may be necessary for the purpose. And it is further ordered, that the defendants pay the costs of this suit.

In the course of his opinion, Judge Strong remarked that while the impolicy of municipal subscription to stock in railroad companies must be admitted, the constitutionality of laws authorizing them has been sustained not only in Pennsylvania, but in sister States, by a weight and uniformity of judicial decisions such as very few other constitutional views have been able to bring to their support.

Mississippi and Missouri Railroad.

The Mississippi and Missouri Railroad is being extended steadily towards Missouri River. The Chicago *Tribune* says:

Six miles, an extension west of Iowa City, have been in operation for some time. The iron is all on hand, and the work is in such a state of forwardness that sixteen miles more will be added to the line by the 1st of April, only three weeks hence. As soon as the navigation opens, the iron will be shipped west for ten miles, and as soon as possible thereafter the line will be opened to Marengo, 30 miles more, reaching Grinnell, half way between Iowa City and Desmoines, will be graded, and if no unforseen difficulty should prevent, the road will be in operation to Grinnell early in the fall. That point reached, more than one third of the whole distance between the Mississippi and Missouri would be completed.

Railroads in Massachusetts.

ABSTRACT, PREPARED FROM THE RETURNS OF THE SEVERAL RAILROAD CORPORATIONS, FOR THE YEAR ENDING NOVEMBER 30, 1859.

Railroad Corporations.	Capital paid in.	Debts.	Cost of road and equipment.	Assets of the corporation.	Length of road in miles.	L'gth of double track in miles.	L'th of branches in miles.	No. of passengers carried during the y.	Tons of freight transported.	Total income.	Expense of working road.	Amount of interest paid.	Net income.	Per cent. of dividends.	Amount of dividends.	Total surplus.
Agricultural Branch	$203,622	$105,800	$350,228[1]	None.	28.36	.....	.....	[1]	[1]	$14,124	[1]	.....	.....	.	None.	None.

Notes to Abstract of Massachusetts Railroad Corporations.

1) Operated and kept in repair by the Boston and Worcester Railroad Company, by whom the motive power and cars are furnished.

2) This sum is the cost to the present company.

3) Eighty shares company's stock.

4) Operated under a lease by the Housatonic Railroad Company; the amount given as expense of working road is for office expenses, etc.

5) Including $17,482 16, income of Danvers Railroad.

6) Including $10,242 25, estimated depreciation on cars and engines, and $21,577 05, cost of operating Danvers Railroad.

7) Including material on hand, etc.

8) Including $9,889 16 for reducing curvature at Brighton.

9) Four and one half on $1,283,600 common stock, and eight per cent. on $307,500 preferred stock.

10) Forty-eight shares capital stock.

11) Operated under a lease by the Boston and Maine Railroad Company; the amount given as expense of working the road is for office expenses, etc.

12) Operated and kept in repair by the Old Colony and Fall River Railroad Company, by whom the motive power and cars are furnished.

13) Operated by the Boston and Providence Railroad Company, by whom the motive power and cars are furnished.

14) On first and second class preferred stock.

15) No report. Property in hands of bondholders.

16) This road is leased to the New Haven and Northampton Railroad Company, by whom the equipment is owned.

17) The capital stock has been merged in the stock of the Hartford and New Haven Railroad Company in Connecticut, by whom this road is operated, kept in repair, and the equipment owned.

18) Operated by the Boston and Lowell Railroad Company, by whom the equipment is owned.

19) Including $8,125, the avails of suits for past earnings.

20) Operated and kept in repair by the Boston and Lowell Railroad Company; the amount given as "expense of working road" is (excepting $104 58) for bills of previous year, and the amount paid for interest is for a period of fourteen months.

21) Equipment owned by the Fitchburg Railroad Company, by whom this road is operated; the amount given as "expense of working road" is for office expenses, taxes, insurance, etc.; and the surplus given includes $3,895 94 for capital stock paid in since last report.

22) This company own no equipment; the road is operated by the trustees of the Norfolk County Railroad bondholders.

23) Formerly Boston and New York Central Railroad.

24) Authorized capital $2.575,000, being the amount of debts and one quarter of the capital stock of the Boston and New York Central Railroad Company, as per act of incorporation.

25) Being the amount of debts, etc., of the Boston and New York Central Railroad Company, purchased.

26) Including Wilton Railroad, and proportions of Salem and Lowell, and Lowell and Lawrence Railroads.

27) Not including $500,000 issued, but not used.

28) Equipment furnished and road operated by Goss & Munson, gravel contractors.

29) Eight and six-tenths miles finished; twenty-three and four-tenths now being graded.

30) The trustees have not the necessary information for answering these interrogatories.

31) Cost in Mass., $773,096.

32) Nominal value of claims, held by company, secured by mortgage.

33) Operated and kept in repair by the Fitchburg Railroad Company; the amount given as "expense of working road" is for office expenses, etc.

34) Cost in Mass., $111,428.

35) Motive power and cars furnished by the Boston and Providence Railroad Company.

36) Cost in Mass., $880,772.

37) Operated and kept in repair by the Boston and Lowell Railroad Company; the "total income" given is for fourteen months; the "expense of working road" (excepting $94 56) is for bills of previous years; the amount paid for interest is for fifteen and a-half months.

38) Own no motive power or cars.

39) Twenty-three shares company's stock.

40) Operated under a lease by the Housatonic Railroad Company.

41) This road is stocked and operated by the Nashua and Lowell Railroad Company.

42) The motive power and cars are furnished by the Boston and Providence Railroad Company by whom the road is operated and kept in repair.

43) The Troy and Greenfield road is in process of construction; the amount given as cost of road and equipment is for construction, land damages and engineering; so far as completed, the road is leased and operated by the Troy and Boston Railroad Company; and the income given is for eight months.

44) Including $248,495 08 charged to Greenfield Branch.

45) Amount given as cost of road and equipment includes $2,586,398 20 for Albany and West Stockbridge, Hudson and Boston, and West Stockbridge roads; the length of road given includes Albany and West Stockbridge Railroad, 38.22 miles; and the expense of working the road includes $1,872 36, loss on Pittsfield and North Adams Railroad.

46) Operated under a lease by the Housatonic, and Hudson and Boston Railroad Companies; the amount given as "expense of working road" is for office expenses, etc.

47) $4 per share.

48) Average rate of dividends on $34,251,806 91 paid capital of dividend-paying corporations, 6 813-1000ths per cent. per annum.

Cincinnati Stock Sales.

Railroad Earnings.

The February earnings of the Cleveland and Toledo Road were $67,325
February, 1859 56,937

Increase $10,388

The Hudson River Railroad earnings for February compare as follows:

February, 1860 ..... $209,422 63
Do. 1859 ..... 190,588 94

Increase $18,833 69

The following are the earnings of the Illinois Central Road for February:

1860 ..... $186,189 07
1859 ..... 133,183 15

Increase $53,005 92

The gross receipts of the Erie road in February were $345,000
February, 1859 310,000

Increase $35,000

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning), for the month of February, 1860, compared with the same month of last year:

	1859.	1860.
Passengers	$7,776 36	$7,020 31
Freight	24,042 13	25,757 03
Other sources	1,686 85	1,686 85
Totals	$33,505 34	$34,464 19
Increase		$959 75

The February business of the Michigan Southern Railroad was as follows:

	1860.	1859.
Passengers	$43,453 38	$44,136 41
Freight	67,325 14	51,857 14
Mails	4 310 38	4,139 86
Miscellaneous	4,744 09	6,694 37
Total	$119,832 90	$106,827 78

—making an increase of $13,005 12.

The statement of the Illinois Central Railroad Company for February, 1860, is as follows:

Land Department.

Acres land sold in Feb. 1859	1,613.05	for $24,425 07
Acres sold prev'sly	1,241,264.19	" 15,800,288 80
Total	1,242,877.24	for 15,824,713 87
Construction Bonds canceled in Feb., 1860		$17,500
Free Land Bonds canceled		1,000
Bonds canceled previously,		1,554,000
Total Bonds canceled up to Feb. 29.		$1,572,500 00
Cash receipts in Feb., 1860		$31,683 87
Total cash and bonds received to Feb. 29, 1860		$3,389,165 59

Traffic Department.

Total receipts in February, 1860	$186,499 13
Do. do. 1859	133,183 15
Increase	$53,315 98
Total increase since Jan. 31, 1860	108,707 84

The January earnings of the New Albany and Salem (now Louisville, New Albany and Chicago) road, were:

Passengers	$19,398 68
Freight	16,239 16
Expenses, etc.	3,400 00
Total	$39,037 79
Expenditures	36,248 78
Excess of earnings	$2,789 01

Of the expenditures, $6,193 were extraordinary and on account of construction.

The earnings of the Little Miami and Columbus and Xenia Railroad for February, 1860, were:

February, 1860 ..... $91,436 96
February, 1859 ..... 86,477 52

Increase $4,959 44

The earnings of the Cincinnati, Hamilton and Dayton Railroad were for—

February, 1860 ..... $41,911 35
" 1859 ..... 38,299 18

Increase $3,612 17

The earnings of the Galena and Chicago road for February were:

	1859.	1860.
Freight	$41,387 64	$39,058 05
Passengers	23,125 24	19,150 93
Mails, &c.	2,430 03	3,800 00
Total	$66,942 91	$62,008 98
Decrease		4,933 93
Corrected earn'gs for the previous m'th.		60,652 72

The earnings of the Ohio and Mississippi road (Eastern Division) for February were:

From passengers	$15,209 96
" freight	14,369 90
Total	$29,579 86

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, March 10, 1860.

Causes of Diminution of Traffic of Western Roads.

The "American Railway Review," in its numbers of Feb. 9th and 16th, makes known its discovery, "that an erroneous impression exists as to the cause" of the falling off in the traffic and earnings of the East and West lines, to and from Chicago, such as the Galena, Rock Island, and Burlington and Quincy roads on the one hand, and the North and South Shore lines on the other; and attributes the decline in revenue since 1856, to the increase of railroads and competition, rather than to the failure of crops and consequent depression of business throughout the West—a depression which, pervading all branches of western trade, is admitted *there* to be the result of meagre harvests following upon the financial panic. It would seem therefore, to say the least, *probable* that railroads should be common sufferers, and it is difficult to imagine how a people can patronize a road much, who have little produce to send, and *less* money with which to travel themselves. However the statement is fortified by an array of figures, upon which the following remarks may not be irrelevant:

The Chicago, Alton and St. Louis Railroad, running North and South, could hardly be considered as in competition with any of the other lines in the statement. Much of the rest of the statement is made up of newly constructed lines, far to the North, nearly the entire business of which is local, and but slightly, if any, in competition with the old lines. Further the business of these lines is, in nine cases out of twelve, not known, but estimated.

It so happens that the roads, whose business is known, and not estimated in the statement, are (with the exception of the Galena to a very small degree) not interfered with by the new lines. The western terminus of the only new through line being over 100 miles north of that of Galena.

Taking the lines south of, and including the Galena, where the business is known, and we find the following result:

	1856.		1859.		
	Miles fin'd.	Earnings.	Miles fin'd.	Earnings.	Per cent'ge of loss.
Gal. & Chi. U.	229	1,450,506	259	1,376,126	33
Chi. & R. I.	182	1,758,348	182	993,706	43
Bureau Val.	87		47		
Chi. Bur. & Q*	238	1,954,551	238	1,404,849	39
	696	$6,163,405	726	$3,774,181	39

* Errors in figures relative to C., B. & Q. corrected.

The Galena line has doubtless lost some of its long up-river business by the construction of the road to La Crosse, and gained some little by the Dubuque and Pacific and Mineral Point roads. The Rock Island and Bureau Valley have had no material cause to change their business except that of the general depression at the West. The Chicago, Burlington and Quincy have had no new competition to lessen their earnings, except for a month or two of 1859 a small amount of their long business has been taken by the Peoria and Oquawka, but they have doubtless gained much more by the extension of the Burlington and Missouri River Railroad, and the opening of the Hannibal and St. Joseph.

During the years in question these three lines together have had more new sources of business developed in the way of feeders than rival lines to be worked in competition, from which it would appear that the loss of an average of thirty-nine per cent. is due to the general depression above.

The Northern lines, as taken from that statement, are as follows (earnings principally estimated:)

	1856		1859	
	Miles.	Earnings.	Miles.	Earnings.
Chic. and Northw'rn.	28	$80,000	194	$345,000
Kenosha & Rockford.			54	150,000
Racine & Mississippi.	53	192,459	101	400,000
Milw. Watert. & B..	31	90,000	50	140,000
Milw'kee & Mis'sippi.	226	670,481	251	780,000
LaCrosse & Milw'kee.	61	314,264	200	850,000
Milw'kee & Horicon.	15		42	110,000
Totals	414	1,347,204	892	2,880,000

Except, as before stated, in the case of the Galena, these lines do not compete with those in the first statement, either for local or through traffic. As the business of all these lines in 1859 is simply estimated, its amount is exceedingly problematical. Most, if not all, of whatever gain there is can well be ascribed to the local and new business of 115 per cent. increase of lines through regions before unaccommodated.

Moreover, the *Review's* statistics in some of its details, work strongly against the point sought to be maintained thereby. For instance, the opening of the LaCrosse and Milwaukee road to a higher point on the river than that reached by the Milwaukee and Mississippi, must have taken away some of the through business of the latter road; but the latter is estimated to have earned more per mile than before. And generally the region where the new lines have been built and competition alleged, there is a large increase of business, while further south where no new sources of competition have been introduced, the falling off has been very large.

The great decrease in the business of the roads thus far alluded to is clearly not due to new sources of competition but to the disasters of 1857, followed by a failure of crops, which together have crippled and depressed all kinds of business in the West.

Pushing this enquiry Eastward from Chicago we do not find the local and through business separated in any of the reports we have at hand, except that of the Michigan Central, which, however, may be taken as a fair sample of the others as to the causes which have affected their business. From that report we get the following figures:

	Year ending May 31, 1857.	Year ending May 31, 1859.	Falling off pr. ct.
Local Earnings.	$1,348,640 98	$942,852 86	30
Through "	1,755,961 71	895,276 91	49
Total "	3,104,602 69	1,838,129 67	44

No new competition has affected the local business of this road, yet it has fallen off 30 per cent.

and as it has been found that the roads of Illinois have fallen off more than that, it is but fair to estimate that the through business would have fallen off more than 30 per cent. had no new sources of competition been introduced. But putting the whole difference or 19 per cent. of the long business to the account of the new lines that have been opened, and we find a loss of about 10 per cent. of the whole business of that line due to new competing line. Now, as this is a less per cent. than in the ordinary state of the West the annual increase amounts to, it is equally clear that the business of the lines East as well as West of Chicago, is not depressed by the opening of new lines, but by the fully sufficient though temporary causes before alluded to.

Illinois Central Railroad.

It is only with the latter part of 1859 that we began to witness any well marked improvement in our western roads. The disasters of 1857 were of a character too sweeping to admit of an immediate recovery. These were followed by short crops throughout many portions of the country, so that the means of an active internal commerce did not exist. Roads that had paid the largest dividends, and which were held in the highest favor, such as the Galena and Chicago, Rock Island, Chicago, Burlington and Quincy and Michigan Central were compelled to forego dividends altogether, or limit themselves to two three per cents.; while such as were loaded with heavy debts, found themselves unable to meet their interest, and have either been wound up by sale under foreclosure of mortgages, or have lightened their burdens by throwing over a part of their load and reducing their capitals to one-half, and often one-third their former amounts.

Of the embarrassed roads the Illinois Central is almost the only one that has been enabled to maintain its capital intact, owing to the fact that its share capital was only partially paid in; the balance being available means to the company. The calls that were made, bore severely upon the shareholders, but call after call was met with great promptitude, and after a long and discouraging period of financial embarrassment, the company, the first time for a very long period finds itself in easy condition, and a better defined future before it, than at any former time in its history. The following statement will show some of the more important changes for the better since 1857. In the fall of that year, the company had a floating debt of $3,700,000, and in addition, notes due in 1858, to the amount of $700,000, which could not have been carried at an interest of less than 9 or 10 per cent. The funded debt of the company, at the same time was $19,530,000, consisting of $16,583,000 Construction, and $2,947,000 Free Land bonds. To pay the floating debt and the accruing interests, recourse was had to the stockholders, who have, since 1857, advanced nearly 7,000,000 on calls on their shares. In the meantime the collections from lands have canceled upwards of $1,000,000 of Bonds, reducing the funded debt to $17,400,000 including the Free Land bonds. The interest on this sum is about $1,100,000; $4,000,000 of it being at 6 per cent. The reduction in the interest account annually accruing, has been from $1,700,000 to $1,100,000. The redemption of the bonds from sales of land is going on at the rate of $40,000 or $50,000 per month, thus providing a sinking fund of nearly a half a million dollars a year, which is likely to be rapidly increased. If, therefore, the earnings of the road prove sufficient, for the future, to meet the accruing interest, a pretty distinct solution of the problem of the success of this road seems to be reached. The earnings for the past six months, compared with a corresponding period for 1858-'9, show the following result:

	1858-59.	1859-60.	Increase.
Sept...	$218,860 58	$246,655 59	$27,795 01
Oct....	184,776 00	248,962 86	64.186 77
Nov ...	156,037 60	285,670 83	79,633 62
Dec....	153,993 78	198,285 35	44,286 62
Jan....	132,024 80	187,416 66	55,391 86
Feb ...	133,183 15	186,189 07	53,005 92
Traffic.	$978,880 95	$1,303,180 36	$324,299 41

The rate of increase for the past six months has been 33 per cent. The same rate for the year would give $650,000 over the earnings for 1860, which would suffice, we think, to meet the accruing interest. But it seems probable that the earnings the present year will reach at least $2,800,000, leaving a surplus of some $200,000 or $300,000 after paying interest. It was only in January last the Mississippi Central Railroad was completed, opening a continuous line of railroad from Chicago to New Orleans. The lower portion of the Illinois Central must serve as the route for the travel of all the cities of the Great Valley to and from New Orleans, which cannot fail to make it one of the most productive pieces of road in the country. The increased traffic of the road consequently, added to that received from the new connections formed, justify an estimate for the present year of $2,800,000.

To relieve the Free Lands, the company has agreed to receive the bonds secured by them, from parties who elect to pay their shares in full. Upward of one million have been paid off in this manner, and it is expected the whole mortgage will be discharged. In such an event, there will be 70,000 full paid shares, on which the company pay 4 per cent. per annum, and 100,000 shares on which $70 each have been paid, leaving $3,000,000 still due. The latter are now selling at less than $30 per share, the purchaser having the benefit of the discount which has gone to pay interest and discharge the floating debt of the company. Should all the Free Land bonds be converted, the debt of the company will be reduced to $15.000,000, with notes on hand to the amount of $13,000,000, and nearly one-half of the lands unsold. That the lands will pay the bonds, there seems no doubt, as $3,357,000 have already been collected from them, the most of it during a period of unexampled embarrassment and distress.

From this view of the condition of the affairs of this company, it would seem that it has reached the turning point, and that success to a certain extent is no longer problematical. If the road, for the present year, earns the interest on its indebtedness, for each succeeding year, larger and larger sums will be left for the stockholders. The lands will discharge the principal of the bonds without doubt, leaving what remains of them, and the road free of incumbrance to the stockholders. With the increase of business which it is safe to anticipate, and with economical management, it is not improbable that the road, in addition to meeting its interest, may do something for the stockholders at an early day.

The Victoria Bridge.

We invite attention to a series of articles upon this structure, the first of which appears in our columns to-day. They are written by an engineer of wide experience, and who is fully competent to the task he has undertaken—an elaborate criticism upon the engineering features of this grand structure, which has always appeared to us a stupendous monument of folly as a financial undertaking. We are quite confident that our correspondent will show it to be an equally absurd performance in an engineering point of view, if the *test of engineering* be to obtain a given result with the least amount of expenditure. Members of the profession will find the article very readable and valuable, as the whole subject of wooden bridges will be considered by way of comparison or contrast to the Victoria Bridge. Capitalists, too, may learn a lesson from this disaster—the danger of trusting too implicitly to the reputation of great names.

Pittsburg and Erie Railroad.

The Pittsburg *Post* says that the receipts of the Pittsburg and Erie Railroad are increasing steadily, and already by a fair amount exceed the cost of operating the road. When eight miles more of the road are completed it will have reached the coal fields of Mercer County, and it is expected a large business will be done in transportation of coal to Erie, Buffalo and other points along the lakes.

Gettysburg, (Md.,) Railroad.

A proposition has been made by this company to extend their road to Waynesboro', Pa., provided the citizens of that section will subscribe $175,000 to its stock. This proposition, we learn, has been accepted, and books have already been opened for that purpose.

Bridge over the Merrimac.

We learn from the Boston *Traveller* that the Eastern Railroad Company intend soon to commence rebuilding their bridge over the Merrimac at Newburyport. This bridge is 2,300 feet in length. The new structure is to be built of iron and wood, and the expense of it is estimated at $60,000. The bridge is to be built very gradually, and it is calculated that it will require five years to complete it.

Galena and Chicago Railroad.

We present below a summary of the report of this company for the year ending Dec. 1859:

The amount charged to construction account, to Jan. 1, 1859, was....	$9,339,890 10
During the past year there has been expended for the construction of a track from our depot at Fulton to connect with the bridge of the C. L. & N. Co....	15,123 65
Making the total amount charged to construction account to January 1, 1860	$9,354,518 75
	Miles.
The present length of the road, including Fulton extension, is..	261¼
Double track	30
Sidings and gravel pit tracks.	44
Total length of track	335¼

Thirteen shares have, during the past year, been

added to the capital stock by the conversion of $1,300 of outstanding scrip.

The capital of the company now consists of 60,277 shares		$6,027,700 00
The Funded Debt at the date of last annual report was		3,788,015 28
There has been purchased and canceled on acct. of the Sinking Fund of the Second Mortgage Bonds.	$109,000 00	
Paid on acct. of Litchfield Bonds	40,815 28	149,815 28
Making the amount of present funded debt		$3,633,200 00
This is composed of—		
1st Mort. Bonds, due Feb. 1, 1862	$260,000	
Do., due Aug. 1, 1862	160,000	
Do., due Feb. 1, 1863	60,000	
Do., due Aug. 1, 1863	1,511,000	1,993,000 00
2nd Mort. Bonds, due May 1, 1875.		1,629,000 00
Litchfield Bonds, due on final settlement of St. Charles air line purchase		11,200 00
Total		$3,633,200 00
The gross earnings for the year ending Dec. 31, 1859, were		$1,369,441 03
The expenses for the same time as charged (excluding construction account) were		823,021 49
		$546,419 54
Interest on bonds	$258,790 54	
Cost of $109,000 2d Mortgage Bonds for Sinking Fund	98,862 00	357,652 54
		$188,767 00
Add surplus January 1, 1859		198,636 44
		$387,403 44
The dividend paid in Feb., 1859, was	$120,528 00	
Amount charged for improvements	8,338 02	
Loss in settlement with Fox River R, R. Co.	7,850 00	136,716 02
Net surplus January 1, 1860		$250,637 42
The whole amount of Second Mortgage Bonds now purchased from current revenues and canceled on account of Sinking Fund is		$371,000 00

After deducting from the amount charged to operating expenses the sum of $20,450, not properly chargeable to the expenses of the year, the ratio of expenses to earnings has been about 58 6-10 per cent.

The report states that the road and rolling stock are in a better average condition than at the close of last year. The decrease in earnings was confined entirely to the first part of the year, a handsome business having been made after the new crop began to come to market. The increase, however, has not been so great as on some of the roads of the State, owing to the destruction of the corn crop in northern Illinois by the frosts and drought.

The company has no floating debt. Bonds to the amount of about $150,000 were retired last year by the operation of the sinking fund. It is proposed to extend the first mortgage bonds soon to fall due, and to establish a sinking fund for their alternate redemption. It is stated that, in this way, the indebtedness of the company can be entirely discharged in about 16 years.

The roads tributary to the Company have made considerable progress the past year. The Chicago, Iowa and Nebraska Railroad has been extended to Cedar Rapids, a distance of 92 miles. A bridge has been constructed over one channel of the Mississippi River, so that this road and the Galena and Chicago are brought into intimate relations. A ferry boat is to be constructed to pass loaded cars from one road to the other. In August next, it is expected that the Sterling and Rock Island road will be completed, whereby a new route between Chicago and Rock Island, made up in a great measure of the Galena and Chicago road, and 18 miles shorter than the Chicago and Rock Island, will be formed. The Fox River Valley Railroad has been re-organized under the name of the Elgin and State Line Railroad, and will for the future be operated by the Galena and Chicago Company.

The following statement will show the cost, earnings, expenses, and net earnings of this road for six years past:

	Cost.	Earnings.	Expenses.	Net Earn'gs.
1854.	$6,797,328	$1,506,710	$724,593	$782,117
1855.	8,630,749	2 315,787	1,063,744	1,252,043
1856.	9,179,020	2,416,343	1,295,493	1,120,850
1857.	9 395,455	1,640,806	921,251	738,355
1858.	9,399,406	1,547,561	927,232	808,231
1859.	9,354,513	1,369,441	823,021	546,419

European and American Railroads.

From a long article in the United States *Economist* we gather some interesting facts in relation to the number, cost, etc., of the railroads of Europe and America. At the close of the year 1857, the length of railroads completed in the principal countries of Europe and in the United States, and also the population of the several nations at the time of their last census, were as follows:

	No. Miles.	Population.
Austria	2,086	39,000,000
France	4,509	36,000,000
Great Britain	9,012	28,000,000
Prussia	2,554	16,000,000
United States	24,290	27,000,000

The following figures show the average cost per mile of railway in the countries compared:

Austria	$92,325
Belgium	81,950
France	128,340
Great Britain	174,720
Germany, except Austria and Prussia	66,160
Prussia	72,480
United States	41,375

From this statement it appears that the cost per mile of the railroads of the United States is less than one fourth that of the British roads; one-third those of France; under one-half as compared with Austria, and about three-fifths of the Prussian lines. In the year 1857, the value of railway property in the four leading nations of Europe and the United States, severally stated, was as follows:

Austria	$192,600,000
France	578,700,000
Great Britain	1,574,000,000
Prussia	184,260,000
United States	1,005,000,000

Brandywine Railroad.

An effort is being made in Wilmington, Del., to revive the project of constructing a railroad up the Brandywine, to connect with the Baltimore Central and Pennsylvania Railroad near Dewington or Cootesville.

Vermont and Massachusetts Railroad.

This company have decided to rebuild their passenger and freight depot at Brattleboro'. It is to be built of brick. The present depot is not large enough conveniently to accommodate the increasing business of this company.

Gulf and Ship Island Railroad.

The last Legislature of Mississippi passed an act providing for the transfer of the stock of the State of Mississippi, in the New Orleans, Jackson and Great Northern Railroad, the Mississippi Central Railroad, and the Mobile and Ohio Railroad, to the Gulf and Ship Island Railroad Company. The transfer is to be made as soon as the individual subscription to the Gulf road shall amount to five hundred thousand dollars, with one hundred thousand paid in. The Legislature also addressed a memorial to the Congress of the United States, praying the cession of five hundred thousand acres of public lands to aid in the construction of the Gulf and Ship Island Railroad.—*N. O. Bulletin, Feb.* 22.

FINANCIAL.

The closing cash prices at the New York Stock Exchange for each day of the week ending 5th March, 1860, were as follows:

The weekly statements of the Philadelphia Banks made up to the 27th ult. and 3d inst., present the following aggregates and comparisons:

	Feb. 27.	March 3.	Difference.
Capital	$11,666,530	$11,669,255	+ $2,725
Loans	25,553,918	25,742,447	+188,529
Specie	4,706,108	4,816,052	+197,944
Due from b'ks	1,824,813	1,567,656	+242,843
Due to banks.	3,115,010	3,133 312	+ 18,302
Deposits	14,590,092	15,192,979	+602,876
Circulation	2,653,192	2,697,108	+ 43,956

The Boston bank statement for the week ending 21st February foots up as follows:

Capital	$36,581,700	Due to b'ks.	$7,430,000
Loans & disc.	60,113,800	Deposits	17,598,000
Specie	4,577,000	and	
Due fr'm b'ks	6,549,000	Circulation .	6,305,500

The cash assets and liabilities of the New Orleans banks on the 25th ult. were as fo'lows:

Loans	$24,395 287	Deposits	$20,850,813
Specie	12,945,174	Exchange.	8,083,929
Circulation .	13,600,419	Due banks,	1,635,257

As compared with the statement of the previous week the results stand thus—

Dec. in loans.	$610,666	Dec. in depo its.	$516,287
Inc. in specie.	50.654	Inc. in exch.	216,930
Inc. in circul.	141,280	Inc. b'k balances	164,089

The return from the Bank of England for the week ending the 15th of February, gives the following results when compare with the previous week:

Public deposits	£6,839,256	Inc.	£526,034
Other deposits.	14,289,756	Dec.	11,930
Rest	3,438,504	Inc.	17,559

On the other side of the account:

Governm't securities.	£10,171,190	Dec.	£240,213
Other securities	21,084,130	Inc.	22,923
Notes unemployed ..	7,873,400	Inc.	424,700

The amount of notes in circulation is £20,991,945, being a decrease of £363,555, and the stock of bullion in both departments is £15,105,287 showing a decrease of £127,970 when compared with the preceding return.

The Currency, Land Warrants and Specie quotations for the week have been as follows:—

Holly's Railroad Steam Pumps.

These pumps are now running with entire satisfaction, discharging under a head of 400 feet, and are being rapidly introduced into factories of all kinds, not only for ordinary pumping purposes, but permanent *Steam Fire* engines. The portable steam fire engines, which are drawn either by horse or by hand, are now coming into general use. Chicago has five of different sizes; Buffalo, two; Boston, two; and Providence, one. Other cities might be named, but the above is a sufficient guarantee of their worth.

The authorities of Chicago, after a thorough test of these machines, in actual service, at fires, for a period of nearly two years—which test has probably been more severe than any other machines have been subjected to in the United States—were so well satisfied of the superiority of the rotary engines over all others, in their more simple construction, durability, and their greater reliability for service at fires, decided to add a fifth machine to the four already in service. This machine was delivered in November last. Its performance at several successive trials elicited numerous encomiums from the press of that city—all of which concur in giving it a decided preference over all others that had come under their notice. Upon her first trial, which was made rather for the purpose of seeing that her machinery was in order, than to test its power, she threw at suction from the river, through 50 feet of hose, and an inch nozzle, with a pressure of 60 lbs. of steam, a horizontal stream of 210 feet. At the second trial, she took suction from the river, and threw a 1¼ in. horizontal stream 225 feet, through 150 feet of hose up an inclined plane of 12 feet. She afterwards threw 1¼ in. horizontal stream, through 500 feet of hose, 198 feet. From a 4 inch hydrant plug, through 100 feet of hose, and 1¼ in. nozzle, with 55 lbs. of steam, she threw 219 feet horizontally. Also 1¼ in. horizontal stream 210 feet, and 1 inch horizontal stream 231 feet, through 100 feet of hose.

This is pronounced the most satisfactory trial that has ever come off of a Steam Fire Engine in Chicago.

The flues of the new engine, of which there are some 275, are so arranged that each one can be unscrewed at the bottom, and taken out in a few minutes, if necessary. The engine rests on India rubber and steel springs. The axles are of iron—the forward one is made of bright polished iron, in the shape of a bridge truss, combining lightness and strength, and at the same time presenting a beautiful appearance.

These machines are light, strong and compact, weighing 4,500 to 6,500 lbs., with water and fuel, ready for service. Steam can be generated in them, in from four to five minutes, and will maintain a steady and uniform pressure for any length of time, and force the water to any desired point for hours without varying. The steam pressure varies from 30 to 60 lbs. as may be required. The rotary machine stands perfectly still; requires no blocking of wheels, or jacking off from springs; does not loosen the hydrants. As the hose lies perfectly still, the pipe is easily held; and the pressure being uniform, the hose is not liable to burst.

The machine above referred to is the lightest in Chicago; it far excelled the others in working, though made by the same manufacturer. Its cost was about $4,000. For further particulars, address the general agent in New York, CHARLES W. COPELAND, Esq., 122 Broadway.

Another engine of this kind, to be drawn by hand, is now being built, to which we shall refer in a future number.

Railroads in Texas.

A bill has passed both Houses, giving the railroads the privilege of locating their lands in small bodies, but providing that every location shall embrace double what the railroad claims, the other moiety going to the State. The S. P. R. has the privilege of connecting by a branch with the Vicksburg and Shreveport road, and has the loan and land bonus on the branch. The Matagorda Railroad has been chartered. This road connects Matagorda with the Wharton extension of the Houston Tap and Brazoria road. The Sabine and Rio Grande Railroad charter has been so amended as to permit the company to commence anywhere on the Colorado, and run to Mazatlan, on the Pacific. A bill has passed to incorporate the Texas and Mexican Railroad Company, to commence at Wharton or Corpus Christi, and thence to the lower Rio Grande, pointing to Mazatlan, by, we presume, the "Vale of Theresa." Charter of Palestine Tap Railway passed both Houses. A bill to charter the Metropolitan Railway Company from Jefferson to Austin has passed both Houses.

Since the failure of the San Antonio and Gulf Railroad Company, the 2,000 tons of iron negotiated by it last summer, has been turned over to the Texas and New Orleans Railroad Company; and the balance of the 10,000 tons purchased for this last named road, is now on its way here.—*Houston Telegraph.*

Wyandotte Iron Mills.

These mills are located at Detroit, Mich. They have been in active operation three years; during which time they have rolled and delivered 21,000 tons of rails, and 5,000 tons of merchant iron; and have used 23,000 tons of old rails, 5,100 tons of Lake Superior charcoal pig, and 4,000 tons of old scrip iron. The average number of hands employed in the various departments is 400.

Grand Rapids and Indiana Railroad.

We have it from good authority that the prospects of this road are brightening every day. The work north is progressing rapidly—twenty miles being nearly ready for the track. The company have lately received offers to supply them with iron, at such rates and on terms which will probably be accepted. The financial matters, under the vigorous administration of the new Treasurer, are improving, and all things at present indicate an early completion of the road.—*Grand Rapids Enquirer.*

Finances of California.

From Wm. T. Coleman & Company's elaborate annual review of the commercial and financial movements of California for 1859, we take the following, relative to the finances of the State and the city of San Francisco:

In regard to State finances facts fully warrant us in the remark that we were never in a more prosperous condition. Still there is cause of opprobrium against us, which we hope will be removed by the present Legislature. We allude to the amount of indebtedness, exceeding the limit of the late funding act, and which the last Legislature failed to provide for. This floating indebtedness is variously estimated at from $150,000 to $250,000, depending for the excess over the first sum named on what action the Legislature may take in relation to certain State Prison claims.

We understand the Treasurer will recommend the funding of all outstanding claims. To do this the Legislature must pass a law for submission to the people for approval. But perhaps a better way to accomplish the object sought would be for the Legislature to appropriate, from surplus funds now in State Treasury, a sum sufficient to purchase, say, $150,000 of State bonds, advertising for proposals for the sale to the State of that number of bonds. These bonds, already in legal form, could be exchanged by the Treasurer for audited floating claims against the State, thus doing away with the necessity of a new funding law, saving $20,000 or more discount on the bonds purchased, and preventing an increase of funded debt by the judicious use of funds that can be spared from the Treasury, which may be squandered, if left there to tempt the cupidity of schemers who always infest the legislative lobbies.

The condition of the State Treasury on the 1st of December, showed a balance of $567,583 42. This would have been probably greatly increased by the termination of the year. The debt of the State at the commencement of 1859 was $1,043,-485 63, of which $143,485 63 was unprovided for. The annual interest on the funded debt was $273,-000. Should the amount of the floating debt be funded by the present Legislature, the aggregate will be increased to $1,150,000.

We are happy in being able to present a more favorable condition of our municipal affairs than at the date of our last annual reference. Under an act of the Legislature, approved April 20th, 1858, a Board of Commissioners assembled in May of that year to provide for the funding and payment of the outstanding claims against the city and county of San Francisco, as they respectively existed prior to July 1st, 1856.

The total claims against the city and county presented, amounted to $2,992,007 21, of which $1,169,357 14 were allowed, and the balance rejected. The allowed liabilities of the county were $375,979 95, and for that sum no objection was urged to the issuance of bonds. But it was contended that no legality attached to the allowed claims against the city, and a suit was commenced to enjoin any issue of bonds for them. The Supreme Court at first dismissed the complaint on a technicality, without deciding upon the merits of the case, but subsequently a definite decision was had, all litigation had ceased, and the full amount of the scrip allowed by the Board of 1858 has been funded, the last bond having been issued December 31st.

The city government has been conducted for the past year with commendable economy, and the Treasurer is now paying cash for all current expenses. Within the year the claim of the Gas Company for $45,000 has been paid, as also $188,-000, drawn for the Interest and Sinking Fund for the debt of 1851, 1859 and 1860. The Interest and Sinking Funds on Fire and Civil bonds of 1854, 1855 and 1858, including the amounts now due and falling due July 1st, 1860, will all be paid. From the fund created by a special tax of forty-six cents per $100, to pay judgments for $158,000, of which $126,000 was ascertained by the Board of Supervisors and allowed, the latter sum has been paid—the balance of $32,000 being still in dispute, and ignored by the city authorities. The taxes have been well collected, and the city has realized every dollar of real estate assessment. The delinquent taxes of 1856 and 1857 are still in abeyance, and subject to the decision of the Supreme Court, which is confidently expected to be favorable to the city. In the estimated receipts and expenditures of the present fiscal year, a deficiency of about $75,000 is anticipated, but this would be obviated by a favorable decision in regard to delinquent taxes. The rate of taxation for 1858 and 1859 was $2 45 per $100; and for 1859 and 1860, $3 17 per $100. For 1860 and 1861, it is estimated that it will be about 30 per cent. less than the latter-named rate.

Mineral Point Railroad.

This road is 32 miles long. It commences at Warren, Ill., a point on the Illinois Central Railroad, about midway between Freeport and Galena, and runs thence almost due north to Mineral Point, Wis. Its entire cost was over $1,000,000, of which the city of Mineral Point and vicinity subscribed and paid in *cash* the sum of $120,000, besides issuing bonds for $60,000 more, to pay which, an annual tax is levied. The road is in complete order, well provided with locomotives, passenger and freight cars, and is ably managed. It will probably be extended to the Northwest, striking the Wisconsin river, and intersecting the Mil waukee and Mississippi Railroad at or near Avoca, thence on to La Crosse and the upper Mississippi country; this being virtually an extension of the main line of the Illinois Central Railroad northward, from Freeport and Warren. A preliminary survey of this extension has already been made.

The following are the earnings from the business of this road for the year 1859: From freight, $19,545 36; passengers, $7,150 54; mails and miscellaneous, $2,250 78. Total, $28,950 68. Total amount of back charges received at stations, $22,782 11. Coupon ticket sales over other roads $5,687 45. Total receipts for 1859, $57,520 24

Iron Masters' Convention.

A large Convention of iron masters, furnace men and capitalists, was held at Portsmouth, Ohio, recently. Nearly every furnace and iron interest in Ohio and Kentucky was represented. A statement made of the iron interests of the two States, shows that the yearly average products of pig iron from sixty-four furnaces were 155,000 tons per annum, and the value of cold and blast metal, $4,650,000. Population supported by furnaces, 31,000. Hands employed, 6,200. A memorial to Congress was adopted, setting forth that the iron manufacture is in such depressed condition as to render capital invested scarcely remunerative, and that relief can only be afforded by a specific duty on the import of foreign iron.—*Cleveland Leader.*

Railroad Route from Uniontown to Demopolis.

Mr. Lewis, the very competent Engineer employed to survey the route for the extension of the Alabama and Mississippi Rivers road, has completed the work from Uniontown to Demopolis. The distance by the routes surveyed from Uniontown to this place is a fraction over 19 miles. The estimate of the cost of the road, exclusive of motive power and rolling stock, per mile is $13,500. It will thus be seen that the section of the road from Uniontown to Demopolis will cost about $270,000, exclusive of motive power and rolling stock, and we presume that the motive power belonging to the road between Selma and Uniontown will be amply sufficient to work the road extended to Demopolis. Of this $270,000, the State has loaned the road $116,000 of the 2 per cent. fund, on the condition that the friends of the road raise $150,000 in subscription to the stock by the 1st of next July. We hope the $150,000 will be raised immediately. That the road will be speedily built, we have no doubt.

Mr. Lewis is now engaged in surveying the route between Demopolis and Livingston.—*Demopolis, Ala., Gazette, 17th ult.*

Smoke-Consuming Locomotive.

The Superintendent of the workshops of the Pennsylvania Railroad at Altoona, has introduced an improvement in one of the locomotives of that road, which consume the smoke. So that instead of the vast volume of smoke which the ordinary locomotive belches forth at every revolution, a little steam only is seen escaping from this invention. In consuming the smoke, a great saving of fuel is effected. It made the run from Altoona—a distance of 117 miles—upon twenty-five bushels of coal, maintaining a high rate of speed all the time, and evincing the possession of extraordinary power.

Substantial Bridge.

The traveling public will be glad to learn that the Pennsylvania Railroad Company are still pushing on the good work of replacing all the wooden bridges along the line of their road with new substantial structures, made entirely of iron, supported by substantial stone piers. The one below Lemon's Station is completed, and we noticed the other day that work has already been commenced upon another, below Parkesburg. Iron bridges, as they are now constructed, are not only strong and safe, but they may be said to be perpetual in their wear, and in fact will never wear out, and so long as they are properly protected by paint or its equivalent, from oxidation, the iron will not in the least become weakened. When this part of the programme is completed, and all the wooden bridges replaced with iron ones, the Pennsylvania Railroad, as a substantial structure, will be without a rival.—*Lancaster Express.*

Augusta and Macon Railroad.

We are gratified to see, by a telegraphic despatch which we publish this morning, that this enterprise has been endorsed by the citizens of Augusta. The vote, though small, indicates that it is popular in that quarter to an almost unprecedented degree. The road, when completed, will give to the produce, which finds its way to this market, two outlets to the Atlantic, and will place us in direct communication with the cities of Augusta and Charleston, both of which have ever been excellent cotton markets. The rivalry which will thus be induced between them and Savannah will whet up the business energy of the latter, and we shall have a good time of it generally. We bid God speed to the Augusta and Macon Railroad.—*Columbus Times, Feb. 17.*

STRAP RAIL
FOR SALE AT CHICAGO.
300 TO 400 TONS OF STRAP RAIL.
Is in first rate order having been only a short time in use, weight about 20 pounds to the yard.
Apply to M. K. JESUP & COMP'Y,
44 Exchange Place,
NEW YORK,
or, 44 Dearborn street,
1st March, 1860. 219 CHICAGO.

New FIRST CLASS FREIGHT ENGINE.
Cylinder 16x24. Wheels 5 feet. Fire-box 4 ft. 1½ in. long, and 5 ft. 6 in. deep. 138 flues 12 ft. by 2 inches. Boiler 48 inches. Tender 2,000 gallons. For sale low by

3m52 44 Water st., Boston.

WINDOW, PICTURE AND CAR
GLASS.
F. HOPKINS & BROTHER,
IMPORTERS,
108 Pearl St., NEW YORK.

FOR RENT,
AT
Rochester, Beaver Co., Penn.

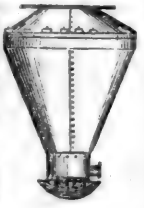
THE SPACIOUS ESTABLISHMENT heretofore occupied by Messrs. KIRK & RHODES, for the building of **RAILROAD CARS.**

This Establishment is now offered *on lease*, for MANUFACTURING PURPOSES. It is admirably adapted to the construction of RAILROAD OR CITY-CARS, STEAM ENGINES, AGRICULTURAL IMPLEMENTS, carriages, omnibuses, cabinet ware, bedsteads, chairs, buckets, barrels, kegs, etc.—or for *Planing machines*, the manufacture of doors, window sash, window blinds, etc., or for the manufacture of *stoves*, and all other *foundry products*; and particularly for *malleable Iron*, in all its forms.

This location cannot be surpassed, as will be perceived by reference to the MAPS of Ohio, Pennsylvania, and the Railroads of the West—having the *facilities* of the OHIO River, with the descending navigation of the Monongahela and Yohiogany from the South, the Alleghany and the Beaver from the North—the terminus of three canals, viz. from Erie, from Cleveland, and from Portsmouth—also 24 *Regular Trains, daily, of Railroad Cars*, connecting with *all the Roads of the West.*

The buildings and appurtenances here offered, occupy a block, 238 feet by 230, or 54,740 superficial feet, facing the OHIO River on one side, and the *Railroad Stations* and *Tracks*, on two other sides. The steamboat landing, canal boat landing, railroad stations, ticket offices, telegraph offices, etc., all within 100 yards of the premises.

The principal building, main wing, smith shops, engine house, kiln-dry, foundry, etc., are all *built of stone.* The principal building is three stories high, front 238 feet, main wing 203 feet, paint shop 175 feet, two foundries 50 by 80 feet, (and two cupolas), smith shops, engine house, etc., all in the hollow square.



A 60 horse Steam Engine communicates *power* to various parts of the establishment, and eight-inch cast iron pipes conduct *spare steam to warm the whole.*

The premises are now ready for occupancy.

ROCHESTER, or "BEAVER CITY," is now the *nucleus* and *centre* of extensive manufacturing, mining and commercial operations, and will soon become *a city* of note,—showing a large and dense population. It is now the natural, and acknowledged *Railroad centre*, steamboat landing, and canal boat terminus, *for ten neighboring villages*, like ten wards of a city—all in sight, within three miles of a common *centre*, and having a population of fifteen to twenty thousand—more than twenty churches, fifty stores, schools, mills, and manufacturing establishments. For particulars, address

M. T. C. GOULD,
Rochester, Beaver Co., Pa.

RADLEY & HUNTER'S
IMPROVED
SPARK ARRESTER.

RADLEY & HUNTER'S CELEBRATED NEW INVENTION is now offered to the public as a **Perfect Spark Arrester**, which possesses the advantage over ALL OTHERS of being of the **most simple construction**, and much more **durable** than any ever used. The manufacturer invites an examination of this Arrester by the Railroad public, confident that it will meet with **universal approbation.**

The undersigned hereby gives public notice that he is the **sole manufacturer** of the above article under the Radley & Hunter Patent, of whom alone they can be purchased in the United States.

EDWIN R. BENNET,
Office 82 Dunne St., New York.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists of Thousands of Gallons, **prove** this Oil to be **superior** for **Burning**, and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable**, that will keep bearings **cool**, and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The *Scientific American* and *Manufacturer's Journal*, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime**, and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels**, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine**, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing,

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

CEMENT, PLASTER, ETC.

THE HUDSON RIVER CEMENT CO.

HAVE commenced manufacturing for the season, and can now furnish a very superior article of fresh **Rosendale Cement, Calcined Plaster, Farmers' Plaster** and **Marble Dust.** Address

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

Victoria Bridge.

(Continued from p. 199.)

The estimated cost of the different parts of the bridge as classified by Mr. Ross and adopted in Mr. Stephenson's Report, dated November 3d, 1855, are as follows:

1st. The approaches and abutments	£200,000
2nd. The masonry forming the piers	800,000
3rd. The superstructure of wrought iron tubes, at £57 per foot	400,000
Total cost	£1,400,000

The abutments are represented to contain 24,000 cubic yards each, measured solid, but as they are hollow, each containing 8 cells 24x48 feet sq., the actual quantity of masonry would be reduced to 12,000 cubic yards each, or 24,000 in both.

The embankments are 2,000 feet in length, averaging 30 feet high, and cannot contain more than 250,000 cubic yards.

A very large price per yard for these embankments would be 50 cents, but if it be put $1, the sum total would be £50,000 sterling, which, deducted from the estimate of the aggregate cost of approaches and abutments, viz, £200,000, leaves £150,000 as the cost of the latter, at the rate of £6 5s stg., or $31.25 per cubic yard.

Now it is quite difficult to understand the necessity for such immense structures as these. They, certainly, are anything but ornamental. Instead of adding to the architectural beauty of the bridge or to its appearance of massiveness, the effect is quite the reverse; for the tube, by starting out of the middle of such huge excrescences, is so attenuated in appearance as to look meagre and tame.

American engineers have been at a loss to understand the necessity for any *more* masonry in one of the abutments than there is in one of the *piers*, except an addition sufficient for the ordinary wings necessary to connect with the embankment.

The quantity of masonry in the piers is represented to average 2,500 cubic yards, each, except the centre piers which contain 3,700 yards, each.

It may fairly be assumed that the piers of the first spans from the abutments do not contain more than 2,000 yards each; for the water is shoal and the difference in height above water between those nearest the abutments, and those of the centre span, is about 22 feet.

If therefore a pier of 2,000 yards will stand at a distance of 242 feet out from the end of the embankments, it is not hazardous to assume that it would stand in *a less exposed position* immediately at the *end* of the embankment. With an addition of 1,000 yards for wings, the amount of masonry actually necessary in one of these abutments was 3,000 yards, or 6,000 in both. The saving would have been 18,000 yards which at the rate of £6 5s sterling per yard, would amount to £112,500. From this saving, however must be deducted the cost of 550 additional feet of embankment—say 60,000 yards at $1, or £12,000 sterling, making the actual saving £100,500.

Among the many incomprehensible things connected with this bridge, the abutments are the most incomprehensible. It may be said that consideration should be given to the machinery or plant necessary to do the work, and that the cost of these preparations should be first deducted from the gross amount before the saving can be correctly estimated. But when we consider that the preparations which the American process would render *necessary* for laying 6,000 yards of masonry in such a location as these abutments are in, with only two or three feet of water, would consist of not more than a half dozen powerful derricks, costing not more than $500 each at a large price—this allowance would not very seriously affect the result.

Mr. Ross in his report to Mr. Stephenson, dated November 30th, 1855, says, in relation to these abutments—"These, it appears, are considered unnecessarily large and more *costly than the tubes;* and it is suggested that they may be reduced by making openings in, or by *shortening them.* These abutments are not in reality what they appear to be on paper, a solid mass of masonry. They are *hollow*, each having 8 openings, or cells, 48 feet in length and 24 feet in width." "The idea of introducing any other description into the abutments than those described is altogether inadmissable; passages through them, where ice could accumulate would insure their inevitable destruction upon the first hydraulic pressure they had to encounter." Now I submit that Mr. Ross here entirely avoids the question, and simply compares his hollow abutments, 242 ft. long, with abutments of the same length, having openings entirely through them. He wholly avoids the question whether *shorter* abutments would not answer, or whether tubes could not have been substituted in place of his abutments, at a great saving of cost, and puts in his, *ipse dixit*, unsupported by a single argument, "that any other description of structure would be inadmissible." I agree with Mr. Ross, that to have constructed his abutments with openings through them would, perhaps, have involved a risk, for the reasons he states, but it by no means follows that his embankments might not have been continued out to abutments similar in their dimensions to the piers, making the saving in the cost which I estimate, or if from some peculiar phenomena of the river, the particular space occupied by these abutments is subject to greater risks than any other part of the site, (which if it be so, is only known to Mr. Ross,) it by no means follows that these spaces might not have been occupied by another span of tubes. In this case, the structure would have required two more piers containing

4,000 yards of masonry, two abutments containing 6,000 yards of masonry, and two additional tubes of 242 feet in length each.

The estimate of cost of these according to the classification of values adopted would have been:

10,000 yards masonry, at £6 5s.	£62,500
484 feet tubes, £57	27,584
Total	£90,084
Cost of the abutments	150,000
Saving	£59,916

Upon these points Mr. Ross says not a word.

Mr. Ross says in the report referred to, "that upon paper the length of the abutments might seem unnecessary and greatly in excess" "You will recollect that the bridge is approached by an embankment 1,200 feet in length from the north shore, and from the south shore, 800 feet in length; the river being narrowed to this extent thereby. The waters thus far embayed have now to find their way through the bridge, and the current overcharged with ice, sweeping its way along the front of the embankment, attains ere reaching it, *a velocity which nothing but the most substantial masonry could resist.*"

It will be recollected that on the 17th of December last on the occasion of the opening of the bridge for traffic, a party of guests were entertained at a banquet in one of these abutments. In the course of the mutual congratulations consequent upon such an event, and in proposing a toast to Messrs. Peto, Brassey & Betts, (the contractors,) Mr. Bruce is reported to have remarked as follows:

"I remember some time ago, when in India, reading a report of a speech which was delivered by Mr. Stephenson, here in Canada, in which he spoke of a certain class of men whose experience, whose talent, and whose skill left to the engineers nothing but the *poetry* of engineering." "And if ever there was a company who by their experience, by their skill, by their capital, and by their enterprise left to the engineers who employed them nothing but the poetry of engineering, it is that of Messrs. Peto, Brassey & Betts." Now I charitably assume that the last quotation from Mr. Ross's report to Mr. Stephenson was some of the *poetry of engineering* here referred to, that being all, according to Mr. Bruce, that there seems to have been left for Mr. Ross to attend to.

According to Mr. Ross's statement to Mr. Stephenson, this is the most marvelous phenomenon of the ice movement, which has yet been discovered; viz. that the current overcharged with ice should sweep along 950 feet in length of this embankment sloped simply with loose stone, without fear of injury to it, and precisely 242 feet from the end it should accumulate such resistless *velocity* as to require such a mountain of massive masonry to withstand it. If this be true, and such a velocity is attained as is here represented, it is difficult to see how the first pier containing only 2,000 yards of masonry could stand up with such a current thrown almost directly against its side, and is the strongest argument that could be used in favor of substituting another span in place of the abutments in order to *let the ice escape before attaining such velocity.* But it is not the case to the extent here represented.

There is a current setting along the upper slope of the embankments seeking its outlet through the first opening of the bridge, but it is not by any means swift, nor is it of a depth to float ice of sufficient thickness to create the slightest fear of its effect on the abutment.

Whenever the water at these points becomes deep enough to float and carry with it any large masses of ice, it is produced by *back* water, created by jams of ice *damming the river below*, and hence has less rapidity than when shoal.

With regard to this question of depth at these points, I will quote Mr. Stephenson himself. "These embankments are being constructed in a very solid and durable manner, and from their extending along that portion of the river *only* where the depth at summer level is *not more than 2 feet 6 inches* the navigation is not interrupted. * * * * * * * Advantage has been taken of *the shallow depth* of water in constructing the abutments which are 242 feet in length and consist of masonry of the same description as that in the piers, and from their being constructed in *such shallow depth* of water, their foundations do not require any *extraordinary* means for their construction."

Mr. Keefer says in relation to this point, page 37, of his report:

"The real difficulty with the St. Lawrence opposite point St. Charles, (the site of the bridge), the point where a jam is most feared, *seems to be a superabundance of room.* The great breath of the river, and the *diminished current when the water is high, permit the ice to ground on these shoals;* whereas if the channel were confined somewhat as it is in summer, the water would maintain its passage as it does at *the head of every rapid* in the St. Lawrence and the Ottawa."

In Mr. Liddell's reply to Mr. Ross' report he says: "As the embankments in question are only in from one to 3½ feet of water, and as the rising of the water is caused by its being *dammed back* by the ice barrier below; and as the ice is said to ground on all this expanse of shoal, I cannot understand how this current overcharged with ice sweeping its way along the front of the embankment, can attain any such velocity. * * * * The substantial masonry, it would then appear, might be confined to the *face* of the abutment and a short wing wall * * * Moreover as the embankments and abutments are at right angles to the stream, and formed so as to allow the ice to slide up them, it is quite evident that it is only where the ice gets into the current passing *through* the bridge that it can have any such action as Mr. Ross speculates upon, and so, it appears to me, that an exaggerated notion of probable effects has led to great extravagance in works to provide against them."

Mr. Brunel in his report of November 30, 1855, says in relation to a modification of the dimensions of the masonry in the piers, "I would carry out the same principle of *reduction in the abutments.* * * * If all of these reductions can be effected, I think that, notwithstanding the progress already made on the south side, a saving of £60,000 or £70,000 might possibly be made."

In this connection it may be well to give further extracts from Mr. Keefer's admirable description of the *ice* phenomena of the St. Lawrence, not only from their bearing upon the particular point I am discussing, but as a matter of general interest. In order that his description may be readily understood by those not familiar with the localities mentioned, I may premise that the river opposite the *lower* part of the city of Montreal is contracted by St. Helen's Island into a deep channel of less than half a mile in width.

This channel is known as the current *St. Marys.* Immediately above the city, the river widens to about 2 miles,—this being the distance across from St. Lambert to point St. Charles. It is quite shoal at this point and somewhat rapid, but not enough so to prevent steamers from ascending into the Laprairie basin immediately above. This shoal is called the *Sault Normand,* and has but one navigable channel near the centre of the river. It is over this *Sault* that the Victoria bridge is constructed. The total fall from the level of the Laprairie basin at the head of the Sault Normand, to the foot of the current St. Mary is about 8½ feet in a distance of about 4 miles.

The current through the channel of this Sault is about 4½ miles per hour, or about the same as the Thames at London at half ebb.

The Laprairie basin extends to the foot of the Lachine rapids. Above these rapids, at a distance of about 10 miles from Montreal, the river expands into the great basin known as *Lake St. Louis.* This extends to the rapids of the *Cascades,* or to a series of rapids known as the Cascades, the Cedars, and the Coteau, which extend to Lake St. Francis. The fall between this Lake and Lake St. Louis is about 83 feet, and the fall from the latter to the Laprairie basin is about 40 feet. The harbor of Montreal, which is the head of ship navigation and the terminal outlet of the canals, is between the foot of the Sault Normand and the head of the current St. Mary. The north shore terminus of the bridge is about one mile above.

In speaking of the formation of the ice dams and the inundations, Mr. Keefer says: "It must be borne in mind that this inundation is in no way connected with floods or freshets, induced by a greater flow of water in the river than usual. On the contrary, it occurs at a time when the discharge of the St. Lawrence *is a minimum,* when the surface drainage and all the streamlets are cut off by frosts. The length of river which sends down the ice for the formation of these dams, is about 50 miles, extending from Montreal to Lake St. Francis. This lake being comparatively deep, (and therefore sluggish,) is frozen over early, and arrests the ice which descends from Prescott and the intermediate islands, another stretch of about fifty miles of river. Cornwall therefore presents phenomena similar to Montreal. The great distance, numerous islands, the strong currents and rapids between Prescott and Cornwall, send down inordinate quantities of ice, which, being arrested by the solid crust over Lake St. Francis, 'flashes' the river opposite Cornwall. In like manner, the current, the rapids of the Coteau, Cedars, Cascades, and the Sault St. Louis and Normand, bring down the 'manufacture' of fifty miles of river to be arrested between Montreal and Longue Point. The shallow expanses of Lake St. Louis and Laprairie basin, are of no value in arresting the ice on account of their strong currents. The river 'takes' *here at Montreal, because by the rise of the water the current is slackened, and the floating ice from above is arrested by the ice bridge below,*

without current enough to force it under—like logs in a boom; whereas the level of Lake St. Louis is not altered, but a certain time and degree of cold is necessary to enable the *bordages* to encroach upon its strong current. If the early part of the winter be mild, or changeable, or accompanied by much wind, these bordages may be broken off repeatedly by the swell before they are closed; but if the winter sets in, as in December, 1851, with uninterrupted severity, this lake is closed sooner, less ice descends, and a diminished rise of water, is the result at Montreal. This explains the apparent anomaly of greater inundations in open winters, and less in severe ones, *i. e.* from the damming back of the waters by ice. The Laprairie basin is so very *shallow that it is not frozen over until its depth is increased about ten feet, by the action of ice dams below.*

"The natural inference from the foregoing is that if the bordage can be retained *in situ*, and the 'taking' over of Laprairie basin, thereby be expedited, a very great portion of the supply furnished for the ice dams below would be cut off and their intensity be thereby diminished. From the foregoing reasons it seems pretty evident that the intensity of the ice phenomena at Montreal is due to the *great area of open water which exists until January above the city, to the absence of natural features above the Town* for arresting and detaining the ice formed within the area of Laprairie basin—and to the existence of *such arresting features below and opposite* the city. * * * Inasmuch as the natural bridges of ice wherever found have the effect of arresting its further descent, which descent is the cause of the grand movement described, and of the winter inundations, it appears to me that an artificial bridge in as far as it will aid in arresting descending ice, retain *in situ* the bordages, elevate the level of the water, thereby diminishing the current, and expedite the closing of the river above, *will unquestionably tend to diminish, rather than increase, the intensity of the ice phenomena* at Montreal.

(To be continued.)

New Orleans, Opelousas and Great Western Railroad.

The gross earnings of this road for the year ending December 31, 1859, was as follows:

From	Passengers	$127,263 00
"	Mails	16,000 00
"	Express	5,328 76
"	Outward freight	80,238 81
"	Inward "	141,137 11
		$370,062 68

The gross earnings compared with those of the previous years are as follows:

	1856.	1857.	1858.	1859.
January	$16,095	$18,068	$33,250	$41,482
February	20,569	22,705	30,386	32,505
March	15,604	15,804	32,629	30,246
April	18,393	22,461		25,144
May	14,520	23,340		9,894
June	12,788	19,345		15,828
July	15,687	20,989	39,631	21,215
August	14,705	22,872		23,115
September	18,816	24,331		27,992
October	18,650	30,766		37,268
November	18,857	28,230	40,963	48,658
December	21,682	35,268	48,719	56,767
	$206,365	$284,178	$225,577	$370,062

It will be perceived that the earnings for the year show a gradual increase, notwithstanding a total suspension of the freight business on account of a crevasse, for nearly two months, during a portion of the season usually most remunerative. But for this interruption, the earnings would have undoubtedly reached $450,000. Being unable to close the crevasse, the attention of the company was turned to the track, three miles of which was raised from six inches to two feet, upon crib work, which has since been filled up. This, it is thought, will secure the road in future against the effects of any similar accident.

A new bridge has been built over the Bayou des Allemands, the old one having become unsafe.

The cross-ties not being in proportion to the width of the track, others of a much larger size and double the width of the track have been introduced, which has greatly improved the road, rendering it smoother, more permanent, and of easier drainage.

Operations have been commenced at New Iberia, in the construction of the road between that place and Opelousas, and some five or six miles of roadway have been graded. The Board have determined to push the work through to its terminus on the Sabine river as rapidly as possible. With the exception of about four miles of swamp near to Berwick's Bay, the whole line from New Iberia to the Sabine, traverses a country highly dry, gently undulating, and remarkably favorable for cheap construction. The distance to be built is 178 miles—making the total length of road when completed, 258 miles. The last 67 miles passes through the pine forests.

At Pine Prairie, 110 miles from the Bay, the line makes its nearest approach to the valley of Red River. From Pine Prairie a branch road of 20 miles will connect this road with the Falls of Red River at Alexandria, and bring New Orleans, within 226 miles, or ten hours travel of that most important section of the State.

In reference to the financial condition of the company, the report says:

We stated in our last report, that the bonds issued in June, 1857, would be canceled, and a new issue made payable in thirty years. This was effected on the 1st of April last, and about 100 bonds sold, when the war in Europe put an end to negotiations. The total number of bonds sold to 31st December, 1859, was 340.

For some years past we have had a loan of $25,000, on a mortgage of our Gretna property, which we have now determined to sell, reserving sufficient for all business purposes, and paying off the debt.

The float debt, which is exclusive of the above loan, and another on pledge of United States Post Office Department certificates, ($32,000) is being rapidly reduced.

The floating debt of the company, Dec, 31, 1855, was $646,000; Dec. 31, 1856, it was $615,000; Dec. 31, 1857, $723,000; Dec. 31, 1858, $493,000; Dec. 31, 1856, $309,000; and at the date of the report, January 23, 1860, it was $268,000. This was to have been materially reduced in February, and it is the desire of the company to have it entirely paid off. This done, there will remain resources from the sale of bonds and other assets, sufficient to complete the road to Opelousas.

In the appendix to the report, full information is given respecting the bonds of the company, acts of mortgage, act establishing a sinking fund, and another providing for punctual payment of the interest, semi-annually, at the Louisiana State Bank. Also, an estimate of the cost of continuing the road to Opelousas, and thence to Texas, &c., showing that with the proceeds of the sales of the lands donated by Congress, the road can be built to the Sabine, and the bonds paid from the earnings. In which case the road, 258 miles in length, worth at a low valuation (with equipments) 6½ millions, will be the property of the stockholders free of encumbrance.

The total capital fixed by the charter is $6,000,000, distributed thus:

State, payable in proportion to actual payment by other subscribers	$1,200,000
City, paid in bonds	1,500,000
Individual subscription and tax stock	3,300 000
	$6,000,000

But as the city and individual payment will not exceed $2,800,000, the State cannot be called upon for over $700,000, unless new subscriptions shall be given; and the total capital of this company, fixed at $6,000,000, will actually be only about $3,500,000; and will be held thus:

State,	28,000 shares amounting to	$700,000
City,	60,000 " "	1,500,000
Indiv'l	52,000 " "	1,300,000
		$3,500,000

The lands donated by Congress will, it is estimated, produce some two or three millions, and with this aid a road worth six and a half millions, may be completed and become the property of the State, city and individual stockholders, to whom the cost will have been only $3,500,000. The prospective value of stock may be estimated from this statement, depending, however, upon a speedy construction of the road, without interruption, to Opelousas, (by which the revenue will be greatly increased,) and thence to the Sabine, with funds to be obtained from sales of a portion of the donated lands, of which some 86,000 acres will be secured on reaching Opelousas, and which are in great request, at prices fully sustaining the estimate made of their value.

Condensed Balance Sheet, Dec. 31, 1859.

Accompanying the report is a very fine map of Western Louisiana and Texas prepared by G. W. R. BAYLEY, Esq., the eminent Chief Engineer of

the Company, which exhibits in full the systems of railroads built or in progress in the respective States.

The office of the company is at New Orleans. The officers for 1860 are—

President—William G. Hewes.
Treasurer—Benjamin F. Flanders.
Vice President—A. B. Seger.
Chief Engineer—G. W. R. Bayley.

European and North-American Railway of New Brunswick.

We are in the receipt of the annual reports of the Chief Commissioner, Chief Engineer and Superintendent, of this railway for the year 1859. In the *Railroad Journal* of March 12th, 1859, will be found a review of the operations for the previous year. A comparison of that, with the present report shows the following statement:—

Up to end of year.	Total expenditures.	Total estimat. cost.	Estimated am't to complete.
1858....	$2,100,356	$3,711,904	$1,611,548
1859....	3,417,383	4,268,689	851,306

	Miles completed and in operation.	Miles in progress.	Total length.
1858....	29.90	78.28	108.18
1859....	64.30	43.88	108.18

It will be seen that although, at the beginning of the year 1859, the estimated cost of completion was $1,611,548, and during the year the expenditures have reached $1,317,027, the road still requires $851,306 of expenditure to finish it. The present estimated cost complete exceeds the cost estimated in the report of 1858 about $556,000 or 15 per cent. The work has progressed so far that these figures are published with confidence. The increase of cost is accounted for by the fact that the original lettings were—for the sake of expediting the work—made upon incomplete surveys covering some of the heaviest work upon the line. Upon looking over the report of 1858, it will be observed, that the whole line had been located under the original contract with Jackson & Co. which included the engineering. As a matter of course, the alignment and grades as well as the contemplated masonry structures were such as would very naturally be designed under such a contract. The line was made quite sinuous, for the purpose of avoiding heavy cuttings and embankments, and hence the masonry of bridges and culverts was light.

When this contract was canceled and the line passed into the hands of the Government, it was deemed expedient to change the greater portion, with a view of straightening the alignment and shortening the distance. By these changes, the curvature was reduced 1,728°, and the actual length 2⅔ miles. The minimum radius of curvature was changed from 1,584 to 2,865 feet, while the maximum was increased from 5,280 to 12,278. These various changes extending over almost the entire line involved the necessity of executing a large amount of engineering in a very short time, and consequently a considerable portion of the work was let before these new surveys were complete, the estimates for which were based upon the original surveys. Mr. A. L. Light, the engineer, refers to this in his report for 1858. In speaking of the Lakefield division among others, he says:—"From the limited time allowed in preparing the plans of construction of this division and from the absence of that knowledge, that more definite surveys could alone supply, and from the fact that, at this time, the engineering staff was far from complete, some of Mr. Giles (Jackson & Co.'s Engineer) general plans were adopted in order to save time."

A new system of letting the contracts was adopted by the Government, viz., in lump sums for each section, rendering it necessary as is quite evident, for every detailed plan to be determined in advance and thus depriving the engineer of the advantage of perfecting his plans as the work progressed and his judgment as to the necessities of each particular case had been perfected by a more intimate knowledge of the localities.

One of the peculiarities of this climate, as Mr. Light says, is the sudden alteration from frost to thaws and rains. In order that the work should be let for lump sums understandingly and upon proper plans, Mr. Light says that the summer season should be devoted to perfecting the locations and a winter and spring devoted to observing the fall of rain and effect of freshets. From an insufficiency of time to ascertain exactly what was required, the estimates were based upon plans of bridges and culverts, which subsequent observations in the winter and spring proved would be insufficient in size to carry off the water, and that the quality of the masonry also, although it might have answered the purpose, was below what a due regard to the safety and permanency of the road was deemed to require.

The freshets of the last and preceding winters demonstrated the necessity of larger openings for the water courses than had been previously thought necessary. The whole line, Mr. Light says, from Passedeag to Sussex, runs along a range of hills from which the water comes with sudden flushes, and on this account requires frequent openings through the road. So, with the line from Moncton to Salisbury which passes a range of table lands cut up by ravines drawing water from an extensive range of hills.

These ravines, at the time of the surveys, had but little water in them, but subsequent experience and observation justified double the amount of masonry first contemplated, and of a more permanent and solid character. Such full and elaborate surveys, however, as would have given an entire knowledge of every possible element of cost would have postponed the letting of the contracts and it cannot be seen that it would have resulted in anything better than a more thorough anticipation of the amount to be expended without, in the least, affecting the actual result.

Again, in exercising the strictest economy in the estimates in accordance with the requirements of the Commissioners, several of the grades were left up to the maximum, and when the remainder of the road was located, these grades being found confined within the limits of a few miles, and exceptional only, it was deemed ultimate economy to reduce them, as they limited the capacity of the whole line. This has been done, but, of course, at an increase of cost.

The experience of every railway company under the operation of lump contracts proves, that, unless they are based on the most perfect and complete locations and upon detailed plans of every structure required, they are no more a criterion for estimates of ultimate cost than the most crude and superficial survey. Indeed, they are rather the cause of an increase; for extra claims are with contractors the rule rather than an exception, and a change of the character of the works, even if it be lessened in cost, is in nine times out of ten the basis of a claim of damages.

It is next to impossible, even with the most elaborate surveys, and with ample time for observation of the water courses and drainage of the country, for the engineer to foresee every contingency. They can only be developed by the progress of the work, and besides, as a rule, railway companies appreciate so little the importance of thorough examinations that they are unwilling to incur the expense of inquiry. Hence it is the case without exception, that the final cost in all such works exceeds the original estimates.

In this instance, however, the excess in its amount is trivial compared with the majority of cases and the causes are plainly and satisfactorily accounted for. A few examples are given in the following table:—

Name of Road.	Original estimate.	Actual cost when opened.	Per cent. of cost over estimate.
Atlantic & St.Lawr'e..	$3,000,000	$5,000,000	66
N. Y. and Erie.....	10,000,000	27,000,000	170
Grand Trunk.....	38,000,000	60,000,000	60
Hudson River	6,000,000	10,000,000	67

It is satisfactory to know that the increase of 15 per cent. in this case, has not been wasted in commissions and discounts and depreciation of securities, without benefitting the work, but has been judiciously expended in making a thorough and permanent road. The finished cost, as now estimated, is at the rate of less than $40,000 per mile, including buildings, wharves, right of way, lands and equipment; which, considering the features of the country, and the character of the work executed, is not a high figure.

The westerly end of the road has been in operation 9 miles, since the 1st of June, 1858, but was opened to Sussex, 44 miles, on the 10th November last. From the Superintendent's report we gather the following: The total receipts for Nov. and Dec., 1859, and Jan., 1860, on this distance, were $15,192.

The easterly end of the line, at Shediac, has been in operation for a length of about 21 miles, since the 20th of August, 1857.

The receipts for the year ending 31st Oct., 1859, on this distance, were $8,809.

The total receipts for the year on all the road in operation, viz: 21 miles at the easterly end, and 9 miles at the westerly end, increased to 23 miles on the 10th of June, are as follows:

110,581 passengers.....	$23,216
Freight.....	11,692
Hire of locomotives and cars.....	23,992
Wharfage, storage, &c.....	288
	$59,188
The total expenses were.....	36,008
Net receipts.....	$23,180

The whole cost of maintenance of way and

buildings is but $2,910—or about 8 per cent. of the expenses. This is an evidence of the very thorough manner in which the road is constructed. The repairs of road and buildings, not including renewals of iron, on the N. Y. & E. R. R., the N. Y. Central and the Hudson River Roads respectively were, for the year 1858, 25, 21, and 22 per cent. of the total cost of operation.

The statements from which the above figures are deduced, are full and systematic, giving each item of expenditure per mile run, and the result may be considered as remarkably satisfactory, considering the yet unfinished state of the road. The whole line will be opened for traffic in July, and the above results warrant most favorable anticipations of the traffic, when these isolated portions shall have been connected.

Journal of Railroad Law.

STOCKHOLDERS: RIGHTS OF ALL TO DIVIDENDS, CHANGING BONDS INTO STOCK.

The custom of surrendering up the bonds of a Railroad corporation, and receiving an equivalent amount in the stock of the company is unquestionably an advantageous arrangement to all parties. But the best arrangements will often give rise to difficulty and law suits. The case of Jones *vs.* Terre Haute and Richmond R. R. Co. is one of these cases, and we think it important to all interested in the bonds or stock of Railroad Companies.

The plaintiff was the owner of four bonds issued by the defendants, a corporation chartered by the State of Indiana, for $1,000 each. These bonds contained a clause by which the defendants agreed to transfer to the holder thereof, at any time before the same fell due, whenever the holder should elect to receive the same, on delivery of such bond and of the unpaid coupons to the treasurer of the company at Terre Haute, an equal amount at par in the shares of the capital stock of said company in exchange for such bonds. The charter of the company provided that semi-annual dividends of so much of the profits as the directors should deem expedient, should be made on the first Mondays of December and July, unless the directors should fix on a different day, and pay the stockholders as soon thereafter as they could with convenience. On the 26th of November, 1856, the plaintiff mailed his bonds, with the unpaid coupons, to the secretary of the defendants, with a demand inclosed, requesting to have the same converted into capital stock, according to the condition in the bond. Such letter reached the Post office in Terre Haute on the 30th November. The defendants did not take the letter from the Post office on that day, and it was not actually received by the defendants until the 3d of December. On that day the Secretary informed the plaintiff that his bonds were received too late for the stock to be entitled to a dividend for the six months ending November 30th. On the 16th December, the Secretary sent to the plaintiff a certificate of stock, dated the 3d December, and a check for interest up to 1st December, being three months' interest, on the bond, or one-half of the amount of the coupon first coming due. This check the plaintiff returned.

On the 15th January the directors passed a resolution ordering that the fiscal year thereafter terminate on the 30th November, and that dividends be declared on the business of the board for six months, ending 31st May and 30th November. The stock and transfer books were closed on the 30th of November, and continued closed fifteen days, and were opened on the 16th of December. On the 17th of December, the defendants declared a dividend as follows:

"Ordered that a dividend of seven per cent. be declared, out of the surplus earnings of the road, ending November 30, payable January 6th." It also further ordered that a stock dividend of twenty per cent. payable in stock and charged to the surplus account be paid to the holders of stock, at the close of the fiscal year, November 30th. The plaintiff demanded the cash dividend and stock dividend, both of which were refused, and he brought this action to recover the same.

The cause was tried before a justice, without a jury, who found as a matter of law, that the issue of stock to the plaintiff did not entitle him to a share of the dividend declared on the 17th of December, nor to any damages against the defendants for non-payment, and that the terms of the resolution did not give the plaintiff any right to said dividend, or any part thereof, or any damages for non-payment thereof. To these rulings the plaintiff excepted and appealed to the general term of the Supreme Court. The opinion of the court is as follows:—

INGRAHAM, J.—It must be conceded that before making the dividend on the 17th of December, the plaintiff had, by the act of the company, been admitted a stockholder, of the date of the 3d December, and even if his rights did not attach until such certificate was actually issued, the issue of it on the 16th December, and placing it that day in the Post office, was an issue to him of the stock at that time and entitled him to all the rights of a stockholder.

Had the corporation declared a dividend while the books were closed, and before the plaintiff was admitted on the books to be a stockholder, by the issue to him of the stock, it might have become necessary for him to enquire whether the arrival of the plaintiff's letter at Terre Haute, on the 30th November, in the Post office, gave him any right to be deemed a stockholder as of that day. The condition of the bond was that the same should be presented to the treasurer at Terre Haute. This condition was not complied with by sending a letter to the secretary, which was not received by him until a subsequent date, and gave the plaintiff no right to be deemed a stockholder. If it had been shown that application for letters on that day was purposely avoided, another question might arise on this branch of the case which it is not necessary now to discuss.

Prima facie, all stockholders, at any particular period, are equally interested in the property and business of a corporation. They assume the same liabilities, are entitled to the same rights, and are equally owners of the property. When, therefore, the directors undertake to distribute among the stockholders any portion of the funds or property of a corporation—whether it be called profits or not—all the stockholders are entitled to an equal share in the fund, proportionate to their stock; whether they have been shareholders for a longer or a shorter period. Unless the charter gives the directors power to discriminate between the stockholders at different periods in the distribution of profits, they are all entitled to share therein. The designation of a fiscal year has nothing to do with the distribution of its proceeds, among the stockholders at the close thereof. It may be more properly referred to as the period for making up, on the books, annual accounts. If it limited the profits to those who held stock at that time, it would alike exclude stockholders who subsequently acquired stock from any surplus remaining after the dividend was declared, as it would form a participation in the dividend then made. But it is not even necessary for the purposes of this appeal to invoke the aid of these principles. By the terms of the resolution itself, the 7 per cent. dividend was declared to be a dividend of seven per cent. out of the surplus earnings of the road, ending November 30th, payable January 6th. It was not limited as the stock dividend was, to those who held stock at the close of the fiscal year. It was unlimited. Who were then entitled to it? The stockholders. Who were they? All who held stock, when the resolution was passed on the 17th December. The plaintiff was at that time a stockholder, by the voluntary act of the defendants.

As such he was entitled to a dividend on his stock, under this resolution, just as much as were the other stockholders. Any other rule would give to the officers of a company a discretionary power as to whom they could pay dividends to. They must pay to the persons holding stock on the books of the company. If the directors making the dividend, do not limit the period, the officers have no right to do so, and their only guide is the stock book to ascertain the parties entitled thereto at the date when the dividend is declared. As the plaintiff was a stockholder on the books of the company at the time the dividend was declared, he was entitled to the cash dividend under the resolution as passed by the board of directors on the 17th December, 1856.

I do not mean to be understood as applying these rules to a case where the dividend is declared before the books are opened. There the officers must be governed by the books as they existed at the time they were closed and the distribution be made accordingly.

The views above expressed dispose of this appeal and render a new trial necessary. It is, therefore, not requisite that we should examine the other question in the case, viz, whether a board of directors, in making a dividend, can limit it to persons holding stock at any given time, to the exclusion of others who subsequently acquire stock. The question is not free from difficulty, and I am inclined to the opinion that the board of directors had no power thus to diminish the value of the stock. But we refrain from expressing any further opinion thereon, at the present time.

The appeal was, therefore decided in favor of the plaintiff.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, March 17, 1860.

California Central Railroad.

The construction of railroads in this new State has commenced in earnest. Up to the present time, nearly, its people have been too much occupied by matters of pressing necessity, always incident to the occupation of a new country, to devote much time or thought to the improvement of means of intercommunication. The State has now increased so much in wealth and population that railways have come to be regarded as the most desirable acquisition—as a matter of absolute necessity, to give full effect and value to the vast resources of the State.

The routes for railroads in California are, in a singular degree, marked out by the topographical features of the State. That portion of it drained by the waters falling into the Bay of San Francisco is divided into two sections—one the great plain lying between the Sierra Nevada and the Coast Range, some 70 miles broad and 300 in length, and which constitutes the agricultural portions of the State; and the other the western slope of the Sierra, from which all the rivers descend, and which constitutes the *mining* districts. The great plain is traversable for railroad in any direction. The mountains admit only of short lines following up the water courses, which soon become too rapid and too closely enclosed between precipitous cliffs, to allow the further progress of these works.

The great bulk of the population, of course, is in the mining district. They produce $60,000,000 in gold annually. They are solely occupied in mining, from necessity as well as choice, their being little or no arable lands in the mountains. Everything they consume, consequently, they import. The amount of transportation which their wants create is enormous, and can hardly be estimated in communities where a greater degree of division of labor supplies to each district nearly everything consumed.

It was to meet these wants that the Sacramento Valley Railroad, a short line of about 22 miles, was constructed. It extends nearly east from the City of Sacramento, at right angles, to the foot hills. It consequently accommodates only one important point, which commands the trade of a portion of but one county, Eldorado, containing about 40,000 souls. Yet, with its short line and with the limited area from which it draws its trade, its earnings already equal those of the first class roads of the Eastern States, as will be seen by the following statement, covering the whole period since its opening:

	1856.	1857.	1858.	1859.
Earnings ..	$173,433	178,186	190,436	211,420
Expenses ..	87,483	87,463	80,885	92,300
Net.....	$85,950	90,723	109,551	119,120

It is at the eastern terminus of this road that the line of the California Central Railroad commences, whence it runs very nearly north to the important town of Marysville, on Feather river, a distance of about 40 miles, skirting in its course the foot hills of the Sierra, and crossing every few miles the great routes leading to the mines. The road, consequently, occupies the best route possible; one that can never be superseded or invaded by other lines. It will command the trade of the great mining counties of the State—Placer, Nevada, Yuba, Butte, Sierra, Plumas, Tehama, Shasta and Siskiyou; the road will serve as the route of trade and commerce for the whole northern and central portions of the State, embracing at least a population of 200,000, whose contributions to it cannot be less than $10 per head, annually.

This is, in fact, a very small estimate for a people whose whole commerce passes over one line—a people who are constantly moving, and the products of whose industry exceeds five times that of the same number in the Eastern States, and who readily pay prices, far beyond our ideas taken from Eastern roads.

The road traverses one of the best agricultural portions of the State. It also runs in the immediate vicinity of establishments that turn out 100,000,000 feet of lumber, annually, so that it must have an ample business from its local traffic alone, to say nothing of the mining population.

Good progress has been made in the construction of the Central road. All the more difficult portions of grading and bridging have been completed. The rails required for the whole line have been purchased, the larger portion of them being on the ground, and are being rapidly placed on the road. For the first division of 20 miles, all the materials for the track, in addition to the rails, are provided, and the whole road can now be completed within the time necessary to lay the track.

This road, though not constructed with such an object in view, as far as it goes, occupies the route for the future railroad across the continent. It is on the direct route to the newly discovered silver mines on the eastern slope of the Sierra, which bid fair to exceed in richness anything of the kind yet discovered. It is the portion of the Pacific road, extending from San Francisco to the eastern boundary of the State, that the people of California are proposing to construct, using the California Central for its whole length. There can be no doubt of the speedy commencement of this undertaking on their part. They are equal to the task of constructing a railroad through their own territory, and well understand the effect on the national councils of a vigorous demonstration on their part. There is no doubt that the State will, as soon as a proper plan is matured, lend its aid to an amount necessary to carry the road across the mountains, a distance of some 300 miles from San Francisco. Her credit is untarnished, and she can easily provide the means for the construction of her portion of the great national work.

Pennsylvania Railroad.

At the annual meeting of this company, held in Philadelphia, on the 5th inst., the following gentlemen were elected Directors for the ensuing year:

J. Edgar Thomson, Washington Butcher, William R. Thompson, Josiah Bacon, Thomas Mellon, John Hulme, G. D. Rosengareen, Wistar Morris, G. W. Cass, William H. Smith, Pittsburg.

Florida Railroad.

The Florida Railroad Company have concluded a contract with Mr. W. Phelan, to complete the track laying to Cedar Keys. The contractor guarantees to have the track ready for the cars, to the Keys, by the 31st of May.

Houston (Texas) and New Orleans Railroad.

The New Orleans, Opelousas and Great Western Railroad is already completed and in operation from Algiers, opposite New Orleans, to Brashier, on Berwick's Bay, a distance of 80 miles; and the company are making preparations to extend it 85 miles farther, to New Iberia, in the Parish of St. Martin.

Parties in Texas are building a road from Houston to Madison, on the Sabine river, a distance of 101 miles. Upwards of 50 miles of this road are graded, and in readiness for the superstructure. The rails are laid for about 20 miles; a large force is at work upon it, the iron for the whole distance has been purchased, and much of it is upon the ground, and the work of laying the superstructure and rails is rapidly progressing. The iron is being laid between the Nuches and Trinity rivers, in the direction of Houston. The company have upon the road two locomotives and twenty-two construction cars, together with two steamers, engaged in carrying iron and other materials from the Sabine Pass up to the line of work. The ties for 50 miles are nearly, if not quite, prepared for laying. The contractors expect to have the whole road between Houston and the Sabine completed in all of this year, with the necessary equipments and appointments, forming a connection with a line of steamers running between the Sabine Pass and the Opelousas road at Berwick's Bay, shortening the Gulf navigation to about 120 miles, and the time between Houston and New Orleans about 24 hours.

A company has recently been formed in New Orleans for the purpose of building an extension of this road from Madison to a junction with the Opelousas road at New Iberia, a distance of 116 miles. The commissioners appointed to receive subscriptions to the capital stock of this company, met at New Orleans on the 26th January last, and opened books for that purpose. During two days that they were in session, $329,800 were subscribed, and five per cent. of the amount ($16,490) paid in cash. The act of the Legislature required, that when $25,000 were subscribed, the stockholders should immediately meet and choose a board of directors. In accordance with this requirement, the following gentlemen were elected: A. M. Gentry, C. M. Congreve and Wm Truesdale, of Texas; and R. W. Rayne and G. M. Shaw, of New Orleans. Subsequently, A. M. Gentry, Esq., was elected President, and C. M. Congreve, Esq., Treasurer. We understand that contracts for the iron for this portion of the road, have been made with houses of the first responsibility in England, through the influence and agency of Messrs. CHAS. CONGREVE & SON, of this city.

Perhaps there is no road that has ever been constructed in the Southern country, that was started under as favorable auspices as marked the inception of this enterprise.

Houston is the focal point in the great State of Texas, from which will radiate a net work of railroads, that will permeate what is destined to be the richest and most productive State in the Union. From Houston, a road is in actual process of construction towards Austin, and work upon it is going vigorously on. It is already completed to Hempstead. The bridge over the Brazos will soon be finished, and there are now 100 hands at work upon the road between Hempstead and Brenham. The Texas Legislature has just passed a bill for the building of an air line road from Brenham to Austin. This road must be commenced within six months, and 20 miles completed within two years. The road from New Orleans to Austin will cross the Eastern Texas Railroad, extending from Sabine Pass in a northerly direction, up through the eastern counties of Texas, to the Southern Pacific Railroad, 20 miles of which are graded, with the prospect of being pushed vigorously on to a final completion. It will also intersect the Houston and Texas Central Railroad at the Brazos river, leading up to Dallas, in the great Wheat Region of the State; crossing on its way thither, the Sabine and Rio Grande, and the Texas Great Western Railroads.

FINANCIAL.

The closing cash prices at the New York Stock Exchange for each day of the week ending 12th March, 1860, were as follows:

Notes to Abstract of Boston City Passenger Railroads.

1) Operated under a lease by the Malden and Melrose Railroad Company, who furnish the entire equipment. The local income given is the amount received for rent for six months.

2) Semi-annual on $70,000 of stock.

3) The entire road owned by this company is under lease to the Union Railway Company, who pay as rent therefor nine per cent. per annum on the capital stock of this company, the interest on its debt, and two per cent. per annum on the mortgage debt, as a sinking fund for its payment. The road being equipped, operated, and kept in repair by the Union Railway Company, reference is made to its return for replies to the interrogatories, in the blank form of return furnished by the Secretary of the Commonwealth, under the heads of *Cost of Equipment, Earnings, Expenditures for Working the Road,* and *List of Accidents.*

4) This road has been located, but no part of it constructed.

5) The Dorchester Railway Company was organized under the provisions of Chapter 279 of the Acts of the year 1856, and purchased the corporate property of the Dorchester Avenue Railroad Company at a sale ordered by a decree of the Supreme Judicial Court, in January, 1858. The road had been leased to Messrs. Gore, Rose & Co., of Boston, who purchased the entire equipment, and have run the cars and line of coaches connected therewith, since June 1, 1858, on their own account, paying a rent equal to eight per cent. per annum on the amount of stock outstanding, and also the taxes and insurance on the buildings. The amount given as "Cost of Equipment," is for lands and buildings, and the amount given as "Expense of Working the Road," is for office expenses.

6) This company own no equipment or buildings; the road has been leased to Messrs. Gore, Rose & Co., of Boston, who run the cars on their own account, paying to this corporation a rent equal to eight per cent. per annum on the amount of stock outstanding.

7) Including the Middlesex, and Boston and Chelsea Railroads.

8) This amount includes the capital voted by the Brookline Railroad Company, whose franchise rights and property have been purchased and transferred to the Metropolitan Railroad Company. See Acts 1859, chapter 35.

9) This road is leased, the lessees equipping and operating it. The total and net income given is the amount received for rent for nine months, and the amount given as the cost of equipment is for land and buildings.

10) Cars furnished by the Malden and Melrose Railroad Company.

11) The roads operated by this company are owned by the Cambridge Railroad Company and the Waltham and Watertown Railroad Company; and the number of passengers carried includes those carried over the Cambridge road to Watertown, Brighton, and West Cambridge.

12) This road is leased for the sum of $1,500 per annum to the Union Railway Company, who operate it and own the entire equipment used thereon; the amount given as "Cost of Equipment," is for land and buildings.

13) The company own no equipment, and, (the road being leased,) it is unable to give the items concerning its business; the number of passengers given is the number carried during the period between the 13th of June and the 30th of November.

14) This road is leased to, equipped and run by the Metropolitan Railroad Company; the amount given as "Cost of Equipment," is for land and buildings; and the item given as the "Expense of Working the Road," is for incidental expenses. The assets consist of 20 shares of company's stock.

15) Semi-annual.

16) Rate per annum on $1,773,000 paid capital of dividend-paying companies.

Erie and Pittsburg Railroad.

This road has been opened from Girard to Jamestown, Pa., a distance of about fifty miles.

Railroad Earnings.

The net receipts of the Harlem Company for the month of February are as follows:

February, 1859	$84,229 54
Do. 1860	95,665 97
Increase	$11,436 43

The receipts of the Grand Trunk Railway of Canada, for the week ending February 25, 1860, were | $55,691 48
Corresponding week, 1859 | 42,274 71
Increase | $13,416 77
Total traffic from July 1, 1859 | $1,789,810 56
Do. for same period last y.. | 1,473,869 25
Increase | $315,941 31

The receipts of the Grand Trunk Railway of Canada for the week ending March 3, were | $56,458 58
Week ending March 5, 1859 | 43,703 65
Increase | $12 754 93
Total traffic from July 1st, 1859 | $1,845,769 14
Same period last year | 1,517,572 90
Increase | $328,196 24

The Toledo and Wabash Railroad earnings have been as follows:

February, 1860	$42,063 53
" 1859	39,571 11
Increase	$2,592 42
Earnings since January, 1, 1860	$85,574 71
" same period, 1859	78,567 75
Increase	$7,006 96

The earnings of the Michigan Central Railroad for February, were:

	1860.	1859.
Passengers	$44,377 73	$48,029 76
Freight	58,202 79	49,831 25
Miscellaneous	5,168 34	5,068 34
Total	$107,748 86	$102,959 35

—making an increase of $4,789 51.

The earnings of the Indianapolis and Cincinnati Railroad for February were:

From Passengers	$12,500
" Freight	22,130
" Mail and Express	1,425
Total	$36,055
February, 1859	27,581
Increase	$8,474

The receipts of this road for the past three months have been as follows:

	1858-'9.	1859-'60.
December	$38,975 72	$45,965 00
January	30,384 40	40,915 96
February	27,588 28	36,055 00
Totals	$96,948 40	$122,935 96

The income for these three months was $25,-987 56.

The earnings of the Norwich and Worcester Railroad for February were:

	1860.	1859.
Passengers	$5,870 07	$5,934 74
Freight	14,242 28	13,768 45
Total	$20,112 35	$19,703 19

Gain over 1859, $409 16.

The receipts of the Housatonic Railroad Company for the month of—

February, 1860, were	$17,492 05
" 1859	15,648 12
Increase	$1,843 93

The earnings of the Central Railroad Company of New Jersey for the month of February were:

February, 1860	$76,138 23
" 1859	65,809 06
Increase, 16 per cent.	$10,329 17

The following is a comparative statement of the business of the North Pennsylvania Railroad Company:

Earnings in February, 1860	$26,337 51
Do. do. 1859	23,907 94
Increase	$2,429 57
In first three months of fiscal year	$84,787 23
Same months last year	72,040 00
Increase	$12,747 23

The February earnings of the Macon and Western Road were as follows:

February, 1859	$28,313 84
February, 1860	33,895 48
Increase	$5,581 64

Mobile and New Orleans Railroad.

The citizens of New Orleans are again agitating the subject of the construction of a railroad between these two points; and movements to effect this object have either been commenced or are on the eve of commencement. The New Orleans *Bulletin*, of March 3rd, says:

It is proposed to build the road to a point nearest to Bay St. Louis and Pass Christian, a distance from this city of about 60 miles to the former and 63 to the latter place. To effect this object, and do it in a very short time comparatively, the plan is to purchase the present Mexican Gulf Railroad, right of way, rolling stock and all, re-build or put it in a complete state of repairs, and extend it to the Nine Mile Bayou, a distance of 18 miles from Proctorville, the present terminus of the Mexican Gulf Railroad. This latter road, on which the cars now run regularly, is 27½ miles long. Its present owners are not able to complete it and are willing to sell the whole of it, including the right of way, rolling stock, buildings and materials, together with the lands for the various depots for something like $250,000, and will take say $50,000 of it in the stock of the new company. This road could be put in complete order and be made to pay handsomely for about $50,000. As it is, it pays 8 per cent. By the purchase of this road and its complete renovation, a great step towards a railroad to Mobile would have been taken. Only 18 miles of road would remain to be built to reach Nine Mile Bayou in the vicinity of Cat Island, which is but 15 miles by steam to Bay St. Louis, and about 18 miles to Pass Christian. The road completed to Nine Mile Bayou, persons could reach either the Pass or Bay St. Louis in *three hours!*

At Nine Mile Bayou the water is not less than nine feet, as the United States surveys have proved. All water craft, not drawing more than this, could therefore come to the Nine Mile Bayou Station, and thence could ship their freight via the cars to the city. Water craft that now pay towage and pilotage would escape these onerous charges, and could discharge and send to the city many articles at a less cost, after paying the railroad charges, than they now pay. This would still further augment the receipts of the road.

The iron of the present Mexican Gulf Railroad is malleable and is alone worth $100,000, or nearly half what the whole road can be bought for. It is believed that this purchase can be made and the road extended to Nine Mile Bayou, with steamers to Bay St. Louis and the pass for, say half a million of dollars, or something near that sum, including the cost of the present road.

From the Bay St. Louis to East Pensacola, the distance is about 40 miles; and the land is high and dry, admitting of the constructing of a railroad for about $10,000 per mile. A charter for a road from Pass Christian to Biloxi, we are told, has already been obtained; as also a charter for a railroad from East Pensacola to Mobile, which is but 40 miles. There is little doubt that if this end of the road is built to Nine Mile Bayou—27½ miles of which are included in the Mexican Gulf road, built and running—the gap from Bay St. Louis or the Pass to East Pensacola, will be immediately filled up by the people of the lake shore towns, while our neighbors of Alabama, and especially Mobile, who are as much interested in this railroad as we are, will see to it that the 40 miles from East Pensacola are promptly built, so as to be ready to meet us on the lake shore. The commencement of this end of the work will stimulate them to prompt and energetic action, which would of course react favorably upon ourselves.

Steam Engineering in 1859.

(Continued from p. 70.)

In the remarks on Steam Generation, when referring to the evaporative duty of 1 lb. of coal, the temperature of the feed has been unintentionally omitted; and to prevent misconception, and give the said remarks the value due to them, it is only necessary to explain, that in all cases 100° is assumed as the feed temperature, for the reasons that this accords with the general working of condensing engines, and has been adopted by the Admiralty as the temperature of the feed experiments.

Before leaving this subject, it will be well to remember that the utmost saving which can be realized by supplying the boilers with water having a temperature of 212° instead of the usual of 100°, does not exceed 10½ per cent.; many disappointments would be spared if this fact was more generally known and respected.

It may also be explained, that fully admitting an increase of the total heat in steam as it increases in pressure, yet, for the sake of simplicity, all the evaporative statements and comparisons have been made at an assumed atmospheric pressure. In general practice, excluding locomotives, the working pressures on land and sea may be included within 15 lbs. and 45 lbs. per square inch (above the atmosphere), and the additional total heat in steam of 45 lbs. per square inch as compared with that of 10 lbs. is, according to the best authorities, about 7.4°; this is equivalent to a loss of evaporative duty in generating the higher pressure of scarcely ¾ per cent., and this loss will be increased slightly by the increased radiation.

In the case of the locomotive, with say a pressure of 150 lbs. per sq. inch, the total heat is about 33° in excess of that of 15 lbs., making a difference in evaporative duty of scarcely 3 per cent. in favor of the latter. It is quite evident, therefore, in comparing evaporative duties under moderate and usual pressures, it is for general purposes unnecessary to notice the difference arising from the varying total heat in steam of different pressures.

After considering the present state of steam generation as regards evaporative duty and economy, it is necessary before passing from the boiler to the engine, to ascertain in what condition steam is supplied and conveyed from the generator to the cylinder.

In land boilers, where space can easily be obtained, steam capacity sufficient to prevent priming is readily insured; but at sea it is often most difficult in a multitubular boiler to supply steam without an undue amount of water in combination with it.

Among the main causes of priming, are contracted water surface, irregular local evaporation, insufficient steam space, and position of steam exit. The first prevails chiefly in cylindrical tubular boilers; the second more or less in all multitubular boilers; whilst the third and fourth may be found in all kinds of boilers.

Unless positive inconvenience arises, the presence of an undue amount of water with the steam is not readily ascertained. Violent action in the gauge-glass, water in the cylinders, and sometimes loss of vacuum, are almost the only signs of priming; but there can be no doubt, all these symptoms may be wanting, and yet the steam supplied be accompanied with an excess of moisture.

Without superheating the steam (which will be referred to in due course), it is essential in avoiding any unnecessary loss of heat to supply it with the moisture due only to its pressure and sensible temperature.

Unfortunately, there is no reliable information on which to determine the amount of heating surface required in the steam space; but it must be evident it should be more or less, according to capacity, area of water surface, and all those other conditions determining the priming or non-priming qualities of a boiler.

The supply of pure steam is a great desideratum, though seldom obtained; little or no anxiety is expressed on the subject, except in extreme cases, when the palpable inconveniences before referred to compel the engineer to supply a remedy.

And now a word respecting the transit of the steam from the boiler to the engine.

On land, as a general rule, there is a considerable length of steam piping between the boiler and the engine; frequently this piping is unclothed, and even when clothed the condensation therein is considerable.

In a Cornish mine, steam power was required under such circumstances, that an unusually long steam pipe was necessary; this pipe was unclothed. The day arrived for setting the engine to work, but it was found impossible to supply sufficient steam to drive the engine alone. The boiler was of the usual description and size for the power; and the failure could not at first be accounted for, but on disconnecting the steam pipe from the engine, it was found that the condensation of the steam in transit was sufficient to abstract ¾ of the heat in the steam; as a remedy, the steam pipe was enclosed in a flue, kept at a temperature equal to the sensible temperature of the steam; the result was in every way satisfactory, there being a pressure of 40 lbs. in the boiler and 37 lbs. in the cylinder.

This is an extreme case; but the bulk of factory engines lose a large per centage of their power by similar condensation, which mere felt and canvass or wood will reduce, but not prevent. In marine engines, with thin copper piping (generally placed under the hatchway, supplying the cold air to the boiler furnaces), the temperature of the felt and canvass covering indicates plainly the combat going on between 250° inside, and 70° outside. The result is an addition to that condensation, the presence of which every engineer must deplore; and the cylinders are supplied with steam of a different and less valuable character than that generated.

One reason why this, to a great extent useless, condensation exists, is ignorance of its exact amount, and often also of its effect in the cylinder, to which we shall refer anon. What would be said of the engineer who supplied his furnace with a constant stream of cold water, or who arranged a shower-bath on the top of the boiler? and yet to produce the effect of such arrangement is the daily orthodox practice of the steam engineer. He readily recognizes the difficulty of absorbing the latent heat, and producing a cubic inch of water from steam in the condenser; whilst, at the same time he is often practically indifferent to the formation of water in the steam-pipe.

Time and experience will undoubtedly show the importance of conserving to the utmost the heat of the steam in transit from the boiler to the engine; and where circumstances require an exposure of the steam-pipe, it will be found that, to avoid a loss more than due to condensation *per se*, it is necessary, by some means, to preserve the working steam at its full temperature and pressure, and arrange that whatever loss of heat and condensation are unavoidable should take place apart from the working steam, in maintaining its temperature and pressure.

Are engineers and users of steam power alive to the importance of supplying steam engines with

uncondensed elastic steam? We think not, or so many unclothed steam pipes and cylinders would not be found in use, the former frequently inclined towards the cylinders, so that all the water resulting from condensation is obliged to pass through the engine to the condenser.

Since steam was first employed as a motive power, there has been a constant yearning among engineers for a simple engine, having few moving parts, and those comparatively frictionless; hence the various schemes for rotary, oscillating, and other simple engines; and we have the result of these efforts in the almost perfect specimens of mechanism now produced by our first engineers of the present day.

If a knowledge of, and attention to the science of steam power had kept pace with the progress and improvement in the mechanism of producing and applying the same, steam engineering in 1859 would not be in such a defective state, nor would there be such a serious difference between the actual and possible results.

All steam engines may be divided into two classes—beam or lever, and direct-acting; and in every kind of steam engine there are two distinctive arrangements affecting the duty realized: the first is the conveyance, use, and disposal of the steam; and, secondly, the mechanism by which the steam pressure is transmitted to the resistance to be overcome.

The pressure and power of the steam being entirely dependent upon its temperature, it follows that the first point to be insured is the preservation of this temperature.

Boiler supplies Cylinder with a certain amount of steam, containing so many units of heat available for power; what does Cylinder get out of this steam? Why, in the first place the reception is most chilling, steam parting with much of its heat in warming Cylinder. Generous Boiler makes good the deficiency, until the door is closed, say at ¼ of the stroke, when, ¼ only of Cylinder being warmed, the remaining ¾ robs the expanding steam, now cut off from Boiler, of a further amount of heat. Cylinder having now got all it can out of steam No. 1, opens the back door, and begs it to make itself scarce, and walk into the condenser, so as not to impede the entrance from boiler of steam No. 2, on the other side of the piston. Directly the water accompanying the exit steam breathes a vacuous atmosphere it begins to evaporate, robbing Cylinder of nearly the whole of its ill gotten heat, derived from steam No. 1; and, not satisfied with this, insists on injection converting it, for the *second* time, into water. These unfriendly acts prevent steam No. 2 from deriving the advantage it had a right to expect from heat supplied to Cylinder by steam No. 1.—*Nolens volens*, steam No. 2 has to re-warm Cylinder, receive the extra supply during admission from boiler until the door closes, and then continues the heat-losing process until, like No. 1, it arrives at the end of the stroke in a most reduced condition, and, as the back door opens, rushes, with its companion water, into the condenser, to give further trouble to injection and pumps. After working thus for some time, Cylinder stops, and Boiler begs leave to have the accounts looked into. Such a reasonable request cannot be refused; but after considerable discussion, no balance can be made. Boiler says to Cylinder "I supplied you with 1,000 cubic feet of steam, which, if rightly employed, should give a duty according to the heat therein, whereas the duty realized is not equivalent to an expenditure of 700 cubic feet; what have you done with the missing 300 ft.?" Cylinder then confesses, with tears (condensed steam), that somehow or other it had borrowed a little heat from steam No. 1 to warm itself, and, at the end of the first stroke, felt quite comfortable, and was in a position to return steam No. 2 the borrowed heat; but directly the back door was opened, the water left with steam, as the result of the heat abstracted by the Cylinder evaporated, and took in to the condenser nearly all the heat that the Cylinder had borrowed from the steam.

After this confession, Boiler proposes one remedy, and Cylinder another; the former said to Cylinder, "I have more heat in my flues than I require(awkward confession), and will give such an extra supply to the steam I furnish you with, that after you have appropriated as much as you require to keep yourself hot, there will be sufficient left to prevent any condensation.

This remedy was tried, and the result was that on all occasions no difficulty was experienced in making a balance. It is but fair, however, to state that Cylinder (this time without tears and with a dry skin) was overheard to remark, that, "since Boiler's remedy had been in force, it was too much of a good thing," and "he had now more heat than he wanted," and "that he couldn't stand it long without losing flesh."

Cylinder's remedy was to keep itself supplied with, and constantly wear a hot jacket, sufficient to keep him at a constant temperature, and prevent stomach condensation, and after trying this plan, Cylinder seemed quite comfortable, and soon saved the cost of the hot jacket.

The above, omitting the remedies, fairly represents the state of affairs in all condensing engines, and is another straw, and rather a large one, on the camel's back.

Water boils in a pure vacuum at a temperature little in excess of that of the atmosphere of an engine room—so that whatever condensation takes place on the admission of the steam to the cylinder, the water resulting therefrom, is invariably of such a temperature, as to be converted into vapor when brought into communication with the condenser; thus this steam is twice generated and twice condensed.

Nor is this diseased condition confined to condensing engines, but exists to a considerable extent even in the locomotive, except when the cylinders are maintained at a temperature equal to that of the working steam by being placed in the smoke-box or flue.

In a Paper read before the Members of the Institution of Mechanical Engineers, by Mr. D. K. Clark, in 1852, it was shown that in engines with outside cylinders, the condensation therein amounted to 20 per cent. of the total steam used, when it was cut off at one-third, or expanded twice. The greater the expansion the greater the per centage of condensation.

In all cases with clothed or unclothed cylinders, when circumstances have admitted of a comparison between the amount of water evaporated and steam used, a considerable loss by condensation in the cylinder and steam pipes has been detected, in some cases to an extent of 40 per cent.

Again, it has been found that 1 lb. of coal expended in heating the cylinder is equivalent in effect to 5 lbs. of coal burnt in the furnace of the boiler.

Again, the amount of heat required to keep the cylinder at the temperature of the working steam, has never been found to exceed 10 per cent. of the total heat expended, and in many cases has been less than 5 per cent., whilst with an expansion of four or five times, the jacket expenditure of 5 per cent. realizes an increased duty of not less than 25 per cent.

Again, the injection and air-pumps can be reduced fully one-fourth, when means are adopted to prevent condensation in the cylinders.

It may be added, also, that the evil effects of water in the cylinders at starting are never experienced, when the cylinders are properly heated.

Watt patented the heated jacket in 1769, and in 1859, not one per cent. of the engines in use, have any arrangements for maintaining the temperature of the working steam, engineers being practically indifferent to the waste such neglect occasions.

Can one heated cylinder be found in her Majesty's steamships of war? if not, will the great men who supply our marine engines to the steam navy, condescend to inform the engineering public why, with their extensive connection and influence, they are, in 1859, so silent on this important subject? will they not have compassion on us, and prove that they are right in ignoring the maintenance of heat in working steam?

Will the designers of the machinery of the *Great Eastern* explain why a trifle of £2,000 or £3,000 was not expended in ascertaining the truth or fallacy of the alleged economy of such a simple improvement as heating the cylinders?

The remarks on expansion, &c., must be left to the next number.

(To be continued.)

Holly's Patent Rotary Steam Engines.

In our notice of the performance of these Engines at Chicago, in our last issue, we mentioned that Boston also had two. We now learn that a third has recently been added from the same manufactory. The following description of the machine, and notice of the trial, is from the Boston *Journal* of 8th inst.

The engine is a rotary machine, built on the same principle as the Eclipse, but about 2,500 lbs. lighter, weighing, according to the certificate of the City Weigher at the scales at Haymarket Square, 6,266 lbs., when filled with water and loaded with fuel, ready for immediate action, and when without fuel and water, 5,600 lbs. It is set upon four wheels of a new pattern, built entirely of iron, but light and substantial.

The principal improvement in this engine is in the boiler, which is vertical, with vertical water pipes passing directly through the fire. These pipes are closed at the bottom and open at the top, where they pass through a water-tight plate, and communicate with the water in the boiler which rises to a level. The arrangement of the tubes causes a constant current, the water rising on the outside of the outer tube as it is heated, and its place being supplied by a current flowing downward through the tube from the boiler. The smoke and flame pass among the tubes, up through the flues. It now seems to be the general opinion that steam can be generated more rapidly in vertical tubes, than by any other plan yet tried.

At the trial to-day, in 5 minutes 50 seconds from the moment of lighting the fire, 15 lbs. of steam was indicated, and water was played through an inch nozzle. During the trial, the engine played streams of various sizes, and all of which were played well and powerfully. A single stream from a 1½ inch nozzle was played 218 feet horizontally; a single 1¼ inch stream, 235 feet horizontally; a 1⅛ single, and two 1 inch streams were played at about the same distance, and it was generally conceded a little further, but no actual measurement was made.

The performance of the engine appeared to be in the highest degree satisfactory, and the machine, which is very neat and compact, was pronounced a great improvement over the "Eclipse" and "Boston," from the same manufactory, both of which are now owned by and in the service of the city.

Railroad Iron Wanted.

WANTED 10 miles (of track) of Railroad Bars, 35 to 45 lbs. per yard, which has been used and will be sold cheap. Apply to MYRES ANDERSON,
3t11* Hackensack, New Jersey.

TO MACHINISTS, CAR BUILDERS, ETC.

THE subscriber is prepared to treat with parties desirous of obtaining contracts for manufacturing the LaMothe Patent Iron Railroad Cars.

E. W. SARGENT,
2t11* 15 Broadway, New York.

New FIRST CLASS FREIGHT ENGINE.

Cylinder 16x24. Wheels 5 feet. Fire-box 4 ft. 1½ in. long, and 5 ft. 6 in. deep. 138 flues 12 ft. by 2 inches. Boiler 48 inches. Tender 2,000 gallons. For sale low by
WILLIAMS & PAGE,
3m52 44 Water st., Boston.

WINDOW, PICTURE AND CAR

GLASS.

F. HOPKINS & BROTHER,
IMPORTERS,
193 Pearl St., NEW YORK.

FOR RENT,
AT
Rochester, Beaver Co., Penn.

THE SPACIOUS ESTABLISHMENT heretofore occupied by Messrs. KIRK & RHODES, for the building of **RAILROAD CARS.**

This Establishment is now offered *on lease*, for MANUFACTURING PURPOSES. It is admirably adapted to the construction of RAILROAD OR CITY CARS, STEAM ENGINES, AGRICULTURAL IMPLEMENTS, carriages, omnibuses, cabinet ware, bedsteads, chairs, buckets, barrels, kegs, etc.—or for *Planing machines*, the manufacture of doors, window sash, window blinds, etc., or for the manufacture of *stoves*, and all other *foundry products*; and particularly for *malleable Iron*, in all its forms.

This location cannot be surpassed, as will be perceived by reference to the MAPS of Ohio, Pennsylvania, and the Railroads of the West—having the *facilities* of the OHIO River, with the descending navigation of the Monongahela and Yohiogany from the South, the Alleghany and the Beaver from the North—the terminus of three canals, viz. from Erie, from Cleveland, and from Portsmouth—also 24 *Regular Trains, daily, of Railroad Cars*, connecting with *all the Roads of the West*.

The buildings and appurtenances here offered, occupy a block, 238 feet by 230, or 54,740 superficial feet, facing the OHIO River on one side, and the *Railroad Stations* and *Tracks*, on two other sides. The steamboat landing, canal boat landing, railroad stations, ticket offices, telegraph offices, etc., all within 100 yards of the premises.

The principal building, main wing, smith shops, engine house, kiln-dry, foundry, etc., are all *built of stone*. The principal building is three stories high, front 238 feet, main wing 208 feet, paint shop 175 feet, two foundries 50 by 80 feet, (and two cupolas), smith shops, engine house, etc., all in the hollow square.

A 60 horse Steam Engine communicates *power* to various parts of the establishment, and eight-inch cast iron pipes conduct *spare steam to warm the whole*.

The premises are now ready for occupancy.

ROCHESTER, or "BEAVER CITY," is now the *nucleus* and *centre* of extensive manufacturing, mining and commercial operations, and will soon become *a city* of note,—showing a large and dense population. It is now the natural, and acknowledged *Railroad centre*, steamboat landing, and canal boat terminus, *for ten neighboring villages*, like ten wards of a city—all in sight, within three miles of a common *centre*, and having a population of fifteen to twenty thousand—more than twenty churches, fifty stores, schools, mills, and manufacturing establishments. For particulars, address

M. T. C. GOULD,
Rochester, Beaver Co., Pa.

RADLEY & HUNTER'S
IMPROVED
SPARK ARRESTER.

RADLEY & HUNTER'S CELEBRATED NEW INVENTION is now offered to the public as a **Perfect Spark Arrester**, which possesses the advantage over ALL OTHERS of being of the **most simple construction**, and much more **durable** than any ever used. The manufacturer invites an examination of this Arrester by the Railroad public, confident that it will meet with **universal approbation.**

The undersigned hereby gives public notice that he is the **sole manufacturer** of the above article under the Radley & Hunter Patent, of whom alone they can be purchased in the United States.

EDWIN R. BENNET,
Office 82 Duane St., New York.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists of Thousands of Gallons, **prove** this Oil to be **superior** for **Burning**, and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable**, that will keep bearings **cool**, and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The *Scientific American* and *Manufacturer's Journal*, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

IRON BOILER FLUES.
LAP-WELDED BOILER FLUES,
1½ to 7 inches outside diameter, cut to definite length, 2 to 20 feet as required.
Wrought Iron Welded Tubes,
From ¼ to 5 inches bore, with Screw and Socket Connections, T's L's, Stops, Valves, Flanges, etc., etc.

LACKAWANNA
IRON AND COAL COMPANY,
SCRANTON, LUZERNE CO., PA.

BY the completion of the DELAWARE, LACKAWANNA AND WESTERN RAILROAD, this Company are enabled to obtain the MAGNETIC ORES from the most celebrated mines in New Jersey, which used in combination with their native ores, produce a **quality of iron not surpassed.**

These Works have been greatly enlarged the past year, and are, therefore, prepared to execute orders promptly for **RAILROAD IRON** of any pattern and weight, **Car Axles, Spikes,** and **Merchant Iron.** They have on hand patterns for **T Rails,** of the following weights per lineal yard, viz —**25, 30, 36, 40, 45, 50, 60, 62,** and **75** lbs.

Samples of RAILS and MERCHANT IRON may be seen at the office of the Company, **46 Exchange Place,** N. YORK.

Address **J. H. SCRANTON,** President, **Scranton, Pa.**
or **DAVID S. DODGE,** Treasurer, **46 Exchange Place, NEW YORK.**

RAILROAD IRON.
WOOD, MORRELL & CO.,
HAVING leased the extensive Works of the **CAMBRIA IRON COMPANY,** situated at JOHNSTOWN, Cambria Co., Penna., and purchased all their real estate, are now prepared to execute, at short notice, orders for **RAILS** of any required pattern or weight, on the most liberal terms.

PHILADELPHIA OFFICE, { NORTH PENNA. R. R. BUILDING, **No. 407 Walnut st.**

RAILROAD IRON.
THE UNDERSIGNED are prepared to contract for the sale of
RAILROAD IRON
on advantageous terms, delivered at ports of England, Wales, or the United States.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

CEMENT, PLASTER, ETC.

THE HUDSON RIVER CEMENT CO.

HAVE commenced manufacturing for the season, and can now furnish a very superior article of fresh **Rosendale Cement, Calcined Plaster, Farmers' Plaster** and **Marble Dust.** Address

HUDSON RIVER CEMENT COMPANY,
12 Jersey City, N. J.

THE Cheapest and most DURABLE ROOFING IN USE.
Sent to any part of the country with *directions for application.*

GUTTA PERCHA CEMENT ROOFING.

SPECIMENS and *references* can be seen, and any desired information obtained on application, by *letter* or in *person,* at our OFFICE,
510 BROADWAY, N. Y.
(Opposite the St. Nicholas Hotel).
JOHNS & CROSLEY.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

American Railroad Journal.

PUBLISHED BY J. H. SCHULTZ & CO. No. 9 SPRUCE ST.

New York, Saturday, March 24, 1860.

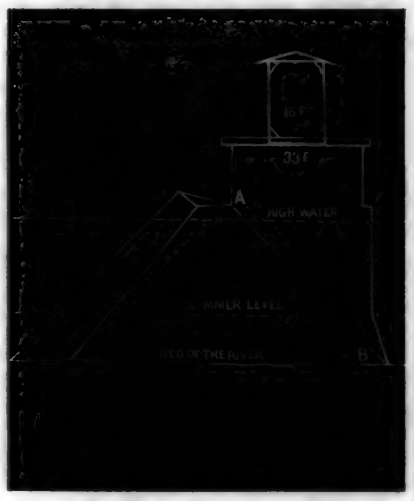
Atlantic, Tennessee and Ohio Railroad.

We observe in the Charlotte, N. C., *Whig* a call for the second instalment of $5 per share on the 17th prox. The first instalment, of a like amount, was called for on the 16th of January last, which was very generally responded to. Some years ago, the friends of this enterprise obtained charters from the States of North Carolina and Tennessee with the view of building a road from Charlotte, via Statesville, N. C., and Jonesboro', Tenn., to the Ohio river, thus connecting the great Northwest by a very direct line with the Atlantic ports of North and South Carolina. Within the past year, this company has been organized, and the work of construction commenced. The portion of this road to which attention is particularly directed at this time, is that which lies between Charlotte, N. C., the northern terminus of the Charlotte and South Carolina Railroad, and Statesville, a point on the western extension of the North Carolina Railroad, running from Salisbury to Ashville, and comprehending a distance of about 45 miles. From the favorable character of the country over which this road will pass, being on the ridge between the fertile valleys of the Yadkin and Catawba rivers, and from the estimates of the engineers, together with the actual lettings of the grading of the first 22½ miles, at $28,000, or a little over $1,200 per mile, it is thought that the road can be built at a cost not exceeding $450,000. It being a virtual extension north of the Charlotte and South Carolina Railroad, that company, seeing the immense extent of fertile country which the building of this road will open up to it, and the consequent increase of business which will be likely to accrue from it, will doubtless find it to their interest to contribute largely towards its construction.

(For the American Railroad Journal.)

Victoria Bridge.

(Continued from p. 243.)

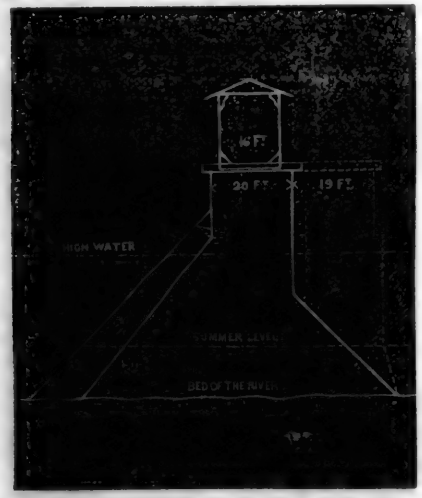


The estimate given in the report of Mr. Stephenson as the cost of the piers, is £800,000 sterling, or $4,000,000.

Mr. Ross states that about 55 per cent. of the entire cost, or about $2,200,000, is incurred before laying the first foundation stone. This would leave $1,800,000 as the actual cost of the masonry. The total amount is represented to be abont 60,000 yards, which would make the cost per yard, £6, or $30.

In considering any saving to be made simply by a modification of the dimensions of the piers, we have to deal, therefore, with the sum of £360,000, which, it appears, was their cost independent of items which, with the exceptions of slight reductions, would be common to small piers. The dimensions of these piers were 16 feet in thickness on the top, with the exception of the centre piers, which were 24 feet thick.

The piers are built with a batter, which gives them considerably increased dimensions on the bottom. The length on top—that is, the length of bridge seat—is 33 feet. In relation to this, Mr. Ross says in his report: "Next, as to the piers, it is alleged that their depth is greater than necessary. This, it appears, is on the assumption that they are 39 feet deep in the shaft. A reference to the accompanying diagram disproves this statement; the depth, you will perceive, is *only* 33 feet. The tube requires a bearing surface of 21 feet. We have, therefore, only 6 feet on each side. The idea of any reduction, therefore, at once falls to the ground."



The inquiry which first suggests itself to the mind of an American engineer is, what is the necessity for a bridge seat, or bearing surface of 21 feet, for a bridge only 16 feet wide? (the width of the tubes;) and the next is, what is the necessity for 6 feet on each side additional? The whole length of bridge seat is, in fact, 17 feet more than the width of the tubes, or more than double. If we take a side view of one of these piers, with an end section of the tube resting upon it, the appearance presented justifies my simile of the pyramid supporting the mouse. See following diagram.

The piers project out 8½ feet on each side. I am aware that these spaces, or portions of them, are covered with a sloping or shed like projection of iron, the actual necessity for which may be doubted; and if this additional length of 17 feet of masonry is necessary to support them, and they in their turn are a necessary and indispensable part of a tubular bridge, the extra length of pier may be an important item of comparison, when contrasting the cost of tubes with the cost of other superstructures; for I know of no other, where the necessity for such projections is involved. That this extra length is not considered necessary even by Mr. Ross to the capacity of the pier to

withstand the ice, I assume to be the case; for if it had been added for that purpose, it cannot be doubted he would have said so. He merely says: "The tube requires a bearing of 21 feet, we have, therefore, only 6 feet on each side."

Simply for the purpose of withstanding the pressure of the ice, it is believed that if the whole top of the pier were removed down to the line marked A B in the diagram, leaving a side view similar to a section of a pyramid, there would not be the slightest fear of failure. It requires no argument to demonstrate that it could not be overturned endwise by any action of ice against its upper slopes; and that the upper courses of masonry, of such character, would not be disturbed, is proved by the example of the revetment wall in part of the city, where, although jams of ice have taken place of such magnitude as to be forced 10 feet above the top of the wall, into the street, and against the buildings on the opposite side, not even a *coping* stone has been disturbed. It may be concluded, then, that all the masonry above *this line is useful only for the purpose of sustaining the superstructure*, and that all that was necessary was a length of 20 feet, giving a slight berm outside the tubes. The remainder might, for all practical purposes, have been dispensed with. A still further reduction might have been made without changing the position of the line A B, by moving the whole top of the pier about 6 feet, until it met the lines of the upper end slopes, as shown in the following diagram:

This change, with the reduction of the useless width on each side, would have taken 19 feet off the down stream end, at the top, running down to a wedge at the bottom of the pier, and giving precisely the same base that it now has, while, in its stead, it would only have added 6 feet to the up stream end of the top, above the level of the ice breaker. The saving from this modification alone, which, I admit, would not in the slightest degree have impaired the capacity of the pier to resist the ice, would have reduced the amount of masonry 12,000 yards, which, at Mr. Ross's calculations of its value, would amount to £72,000, or $360,000.

All the argument that Mr. Ross brings to bear upon this point is "the idea of any reduction at once falls to the ground," because we have now only a little more than twice the bearing that the tubes require. To be sure, the amount was small —only a trifle over a third of a million of dollars! and of course it could not be expected that Mr. Ross would waste a great deal of time upon so trivial an amount.

So far as the experience of American engineers extends, the modified form I propose would present a far more effective barrier to the ice than the one adopted. With the latter form, any "shove" of ice which should reach above the top of the slope, would find a resting place, until it could pile up against the tubes, while, with the former plan, upon reaching the top of the slope it would meet a perpendicular face which would turn it back upon itself, thus forming a barrier for the protection of the pier. That my hypothesis is correct, is proved by an incident related by Mr. Logan, in a paper read before the Royal Geographical Society, in 1842, and which is also quoted in Mr. Liddel's reply to Mr. Brunel. "A few years before the erection of the revetment wall at Montreal, a merchant was tempted by the commercial advantages of the position, to build a large cut-stone warehouse by the river side. The ground floor was not more than eight feet above the summer level of the river. When the ice barrier, or bridge, was formed, the usual rise of the water inundated the lower story, and the whole building becoming surrounded by a frozen sheet, a general expectation was entertained that it would be prostrated by the first movement. But the proprietor had taken a very simple and effectual precaution against this. Just before the rise of the waters, he securely fixed against the side of the building, at an angle less than 45°, a number of stout oak logs, a few feet asunder. When the movement came, the sheet of ice was broken and pushed up the incline thus formed, *at the top of which meeting the wall of the building, it was reflected into a vertical position, and the pieces falling back on each other, such an enormous rampart of ice was in a few minutes placed in front of the warehouse, as completely shielded it from all danger.* In some years the ice has piled up nearly as high as the roof of the building."

Mr. Stephenson, upon the question of a saving of masonry, by reducing the size of these piers, chooses to assume, in his report, that all suggestions had reference only to dispensing with the sloping ice breakers, preserving the rest of these enormous piers intact, and proceeds to argue seriously the difference in cost between these fractional portions of the piers, and the cost of the crib work shoes proposed by Mr. Keefer to meet a special case, which Mr. Stephenson, in his argument, terms *ordinary* ice breakers. He says: "To convey some idea of the magnitude of *ordinary* ice breakers, placed on the upside of the pier, and to enable you to form some notion of their cost, I cannot do better than quote the following." He then proceeds to Mr. Keefer's description of these shoes, which is concluded in these words: "Their application to the sides of the piers is with especial reference to preventing *the ice from reaching the spring of the arches*, which will be the lowest and most exposed part of the superstructure if wood be used." The inference to be drawn from Mr. Stephenson's language is that these are the *ordinary* ice breakers used by American engineers, and that the ashler piers of the Victoria Bridge, with their up stream ends, sloped and sharpened, embodied a *new* idea on this side the Atlantic.

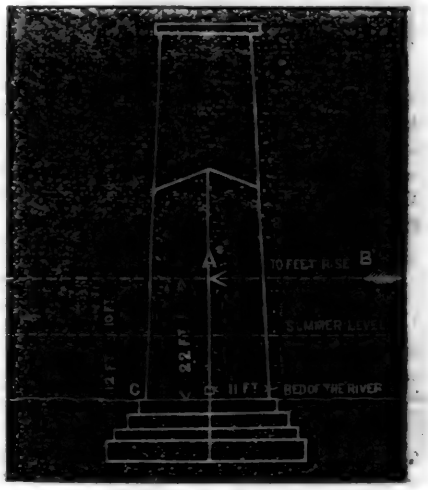
Aside from this, the unfairness of the comparison is evident, when the simple cost of so many yards of masonry in these up stream ice breakers, irrespective of the cost of coffer dams and other appliances, which Mr. Ross estimated to cost 55 per cent. of the whole piers, is placed in comparison with the crib work shoes proposed by Mr. Keefer, one important purpose of which was to avoid these expenses. In fact the shoes were the only coffer dams required.

Beyond this comparison, to which I shall again have occasion to refer, Mr. Stephenson does not say a word *pro* or *con* about any saving to be made by shortening the piers or reducing their thickness. And Mr. Ross in figuring up the saving to be made by taking off the ice breakers, and comparing this with the cost of Mr. Keefer's cribs, says the amount of masonry saved, would be exactly 20,000 cubic feet, and he makes the amount a trivial one by applying a valuation of 2s. 6d. per foot deduced, by a very singular calculation. 1st. He says the total cost of piers and foundations is £800,000. 2d. That in laying the first stone 55 to 60 per cent. of the whole cost is incurred. 3d. That there is, therefore, but 2s. 6d. left for the remainder; *i. e.*, the remainder of the stone. The total being £800,000, 55 per cent. being set aside for the "first stone," we have according to my knowledge of arithmetic, £360,000 for the rest of the stone. As the whole is represented to amount to 60,000 yards, and as the "first stone," in its cubic contents, bears a very small proportion to this amount, we may disregard it. We have, therefore, 60,000 yards of masonry to be constructed for £360,000. This is at the rate which I have elsewhere stated, viz: £6 per cubic yard. As a cubic yard contains 27 cubic feet, the rate would be nearly 4s. and 6d. per foot, instead of 2s. and 6d. A very important difference. Certainly comparisons made in matters of this kind, upon the result of which depends the expenditure of such enormous sums, should not rest upon such loose statements as these.

Mr. Brunel seems to have labored under the same delusion as regards the novelty of sharpened ashler piers in America. He says in his report, "engineers in the north of the American Continent have had much experience in the construction of *ice fenders*, and have, I believe, constructed many in various ways, with great ingenuity and skill, of various degrees of strength, according to the necessities of the case, and the materials at hand; and no doubt many of them have succeeded admirably, or at least are said to have done so; but at best these have been but rough expedients intended to add to the security of some existing works, cleverly adapted to the peculiar position in which they were placed, or intended to meet any very probable contingency, and capable of being strengthened or repaired if they should prove weak or become partially damaged by any unusually severe winter. By the reports of the American engineers themselves it is evident they treat the *ice fenders*, generally, as *provisional* works, thrown up to protect others, and calculated by themselves to require renewal or repair. This mode of treating them does not for the reasons I have given seem to me fitted for the present case."

All this will no doubt be news to American engineers, who have not read Mr. Brunel's report. Upon the 20,000 miles of railways in our northern

States and in Canada, and among the thousands of bridges which have been constructed, I will venture to say that not one in fifty of any consequence, where piers have been needed, and ice was to be resisted, have been built without ashler piers, and with the up-stream ends sharpened and sloped for that purpose. True, they are sometimes faced up with a wooden sheathing strongly bolted to the masonry, but this is more particularly the case where the masonry is laid without cement. These ice breakers, or ice fenders, as Mr. Brunel terms them, have not been merely separate *rough provisional* expedients, but as a rule, with a few unimportant exceptions, have been *inherent* parts of the piers themselves.



I might instance the bridge across the Connecticut River at Springfield, built by Major Whistler in 1840, for the Western Railroad; the bridge across the same river on the Hartford and Springfield road; the bridge across the Delaware on the New York and Erie road; the bridge across the Susquehanna at Harrisburg, and many others, constructed long before the Grand Trunk Railway Co. had an existence; and later still upon *that* road—the bridges across the Richelieu and St. Frances Rivers. This however is foreign to the subject, and I only mention it to show a specimen of one among the many wonderfully new ideas claimed for the Victoria Bridge.

In regard to the dimensions of the piers, Mr. Brunel says: "Mr. Stephenson has already I know recommended that the length of the piers should be reduced at the base about 6 or 7 feet, and at the top about 13 feet. I believe this will effect a saving of not less than £60,000 or £70,000, and I fully concur in the opinion of the safety and feasibility of the reduction." But Mr. Stephenson says nothing of this, and Mr. Ross says the idea of a reduction at once falls to the ground. It would appear, therefore, that if Mr. Stephenson did recommend it, it was not carried out.

Mr. Brunel is correct in one part of the statement, in regard to the ice fenders, viz: that American engineers have had much experience in the erection of structures designed to resist the action of the ice, and one among the important conclusions to which their experience has led them is, that as much is to be feared from making their piers too thick, as making them too thin. As a rule for any but extraordinary cases, they have determined that the dimensions of the top are more dependent upon the bridge seat, which the peculiar superstructure they may adopt will require, than upon any other condition; and that, generally, with a batter on each side of ½ to ¾ of an inch to a foot, the base will be sufficient. Additional base when thought necessary may be obtained by increased batter. For instance a pier of 60 feet in height upon which the bridge required a bearing of 10 feet, would, with a batter on each side of an inch to the foot, have a thickness at bottom of 20 feet. They have found also that if a pier have a length on the bottom between the point of the ice breaker and the "heel" which will enclose a verticle section of a pyramid, its sides having a slope of 40°, and its apex reaching to the highest level at which ice is to be resisted, it is of dimensions sufficient to resist almost anything in the form of ice which will strike it, in the direction of its length; provided it be of suitable masonry, thoroughly laid in cement, and well doweled and clamped, and the end presented to the ice has a slope of 40°. Such a pier cannot be moved longitudinally by ice, for the ice, if not parted by the ice breaker, will slide up the slope and go over before it will move or overturn it. Mr. Keefer says "that the ice is not, as is often remarked, "irresistible," may be proved from the fact that the islands, rocks, wooden wharves and stone quays have not been removed by it." The power required to crush a cubic foot of ice is much less than that required to crush stone, iron or wood. If, therefore, there is mass enough, the ice is broken into fragments or ground into powder. The simple expedient he says is "to turn the ice back upon itself and leave the first arrivals to take the shock of all that follows after." By sloping the up-stream face of a pier, so that the ice will ride upon it, the stability is increased by the additional weight piled upon it, and a heavy rampart of ice receives all further assaults. We may conclude then that so far as the longitudinal strength of the pier in involved, not the slightest necessity exists for the depth in the shaft with which they have been constructed, and that unless they are subjected to severe lateral "shoves," creating a pressure tending to overset them sidewise, the enormous thickness given them is also superfluous.

Can any such pressure occur at this point? All descriptions of the ice phenomena in the St. Lawrence concur in their conclusions as to the causes of the *lateral* shoves opposite the city—viz: that the deep and comparatively still water below the Current St. Mary closing first, arrests the floating ice coming down from above. This is not arrested by a broad margin of ice extending across the river at right angles, but in a sharp pointed space of open water where the current "tails off" into the still water. The accumulation of floating ice in this space piles up in a mass of broken fragments which partially congealing together forms a wedge which remains stationary until the escape of the water under it is so obstructed as to *back* the water and raise it above. The head finally becomes so great that this wedge is driven forward forcing the ice on each side in immense piles against the revetment wall in front of the city, and against St. Helen's Island opposite. This effect is sometimes produced for some distance down the river by the continued movement of this immense wedge, and the ice has been known to pile up at the Longueiul terminus of the railroad, so as to endanger the buildings which are placed above high water level, although this terminus is on a sort of bay or eddy, on the south shore of the river, under the lee of St. Helen's Island. That no conditions exist at the bridge site, or in its immediate vicinity, which could possibly create such effects as these, is quite clear. These wedge-like accumulations can only be formed at the *foot* of a rapid or current where it "tails off" into deep water while the bridge is at the head of the Sault Normand, and at the foot of Laprairie *basin*, where there are no "arresting features. It is quite clear then, the piers could not be subjected to any lateral shoves as are here described, and which are beyond question the most formidable of the phenomena of the ice movement. The only lateral pressure, then, which could ever possibly be brought against the piers, would be from floating *fields* of ice, broken off from the bordages above, as described by Mr. Keefer, which are brought down by the current of the basin, to add to the accumulation below—and these could not exert any serious pressure of the kind to be feared unless they were of the exact size necessary to fill the space between any two piers, and of great depth. In this event their effects are not so much to be measured by their area, *thickness* and velocity, as by the capacity of ice to resist pressure without crushing. It appears clear, from all the descriptions, that such fields of ice could not be brought down with any force after a dam had been formed by a jam of ice below so as to raise the water to any considerable extent; for, as previously explained, when the water is dammed back the current is so lessened as to allow the whole expanse of the *Sault* and the basin above te become frozen over. It is only, then, previous to the dams being formed, and when the water is low, that any action of this kind upon the piers from floating ice is to be expected, and this of course must be low down near the base. Mr. Keefer states "when a sufficient quantity (of ice) has been sent down to raise the level of Laprairie basin 10 feet, the current therein is so diminished as to become frozen over, and then all further supply is cut off."

This, we may take it, is then the highest point at which *floating* ice would strike the piers, viz: about 10 feet above summer level. If we take the depth of summer water at 12 feet, we shall then have the point of pressure created by floating ice at 22 feet from the bottom. The top of the highest piers, excepting perhaps the large piers at the centre, is about 70 feet above the bottom. The thickness at the top being 16 feet, and the batter being assumed at ½ inch per foot, the thickness at bottom would be 22 feet. The section would be nearly as shown in the following diagram

This section we are to overturn by a force applied at A in the direction B A, or we are to move it bodily sidewise. The whole mass being cemented, doweled and clamped together, is a monolyth, and it is quite evident that no movement of the latter kind could take place without moving a large area of the bed of the river which surrounds it. If any effect, therefore, is produced by the force at A, it must be to overturn it, upon some point below as a fulcrum. Let us assume this to be at C, on the level of the bed of the river. It will be near enough for all practical purposes to consider the pier as containing 2,000 yards above

this level, weighing 4,600 tons, which, with the weight of the bridge resting upon it, would give 4,875 tons as the weight acting vertically upon the point D at the middle of the base. Then A D C may be considered a bent lever, with its fulcrum at C. The two arms of the lever would be A D 22 feet, and D C 11 feet. It would, therefore, require a force equal to one-half the weight, or 2,437½ tons, disregarding the cohesion of the cement on the line C D. If we call the pier 80 feet long at this point, its width being 22 feet, the area will be 1,760 feet. The tenacity of best Rosendale cement, two parts cement to one of sand, when well set, is 40 lbs. per square inch, or 5,760 lbs. per square foot; but if we estimate it at only 4,000 lbs. or two tons per square foot, we have 3,520 tons as the additional resistance due to this, requiring an additional power of 1,760 tons to overturn the pier—or a total in all of 4,197½ tons, disregarding any additional strength which might be given by iron clamps and dowels. The whole length of the pier at the level of the line A B is about 65 feet. A sheet of ice, therefore, two feet in thickness, would be subjected to a crushing force of over 32 tons for every square foot of its edge in contact with the pier; or if 5 feet thick to a force of nearly 13 tons per square foot before it could exert any pressure to be feared. It is needless to say that any such pressure would crush the most solid sheets of ice like an egg shell. But solid sheets of such thickness are not formed. If any masses of such depth are brought down the current, they are composed of broken fragments piled up together, and only partially congealed. A slight obstacle serves to crush them, and besides as the specific gravity of ice is but little less than water, such masses would be nearly submerged, and the actual central line of impingement would be at a lower point, so that the pier would present increased resistance.

(To be continued.)

Charlotte and South Carolina Railroad.

The annual meeting of the Charlotte and South Carolina Railroad Company was held at Columbia, February 8th, at which the annual reports were presented. The earnings from operations of the road during the fiscal year ending December 31, 1859, were—

From Passengers		$103,990 84
" Freights		166,866 28
" Mails, express, etc.		23,426 89
		$294,284 01

The expenses were:

Maintenance of way	$42,274 89	
Conducting transportation	31,297 41	
Motive power	21,058 33	
Maintenance of cars	7,288 96	
Machine shops	17,520 60	
Loss and damage	3,355 83	
	$122,795 53	
Extraordinary expenses	13,869 00	
		136,664 52
Net receipts		$157,619 49

This sum is chargeable with $26,000, the interest due on the company's bonds July 1, 1859, and Jan. 1, 1860; 6½ per cent. of dividends on the capital stock, payable at the same periods; the redemption of $25,000 of bonds maturing Jan. 1, 1860; and $600 applied to the purchase of real estate—leaving a surplus in the treasury of about $30,000.

The extraordinary expenditures embrace all disbursements, such as improvements on roadway, superstructure, equipments, etc.

A comparison of the income of the past with the previous year, shows an increase of $11,020 21, from all sources; a diminution on freight of $6,324 09, and an increase on travel of $14,103 08. This loss has been on down freights—the number of bales of cotton transported being only 50,032, nearly 4,000 less than the former year, while the gain has been on through travel.

The roadway and track are in good condition. The business has been done with comparative freedom from accident; not once during the year has a passenger or freight car or engine been thrown from the track. No accident has happened during the past four years resulting in the slightest injury to any passenger. One locomotive has been purchased during the year. The company will require during the spring 300 or 400 tons of new rails, also a passenger coach, and should the business continue to increase, it may be necessary to purchase another locomotive. The number owned by the company is 14.

The number of miles run was 200,576, at a cost of 60.8 cents per mile. This is a decrease from the previous year of 12,379 miles, although the amount of business has been greater. The report says:

"The policy of the board of directors in conducting the affairs of the company has been conservative; for while the property and road have been gradually and constantly improving, its bonded debt (the only debt it now owes) will soon be reduced $49,500. This will have been paid out of its earnings for the past two years—after paying to the stockholders a fair dividend, and still leaving over a balance for each year. And while the present state of the treasury, and the general condition of the property cannot but be regarded as sound, with an annually increasing business, we may look confidently to the future success of the road. It occupies a commanding position; penetrates a fertile, agricultural country, abounding in wealth, and an intelligent and enterprising population, and leads to the best markets of the south, which must ensure it a permanent local business, while its direction is favorable to the reception of a large through travel."

This road is 109 miles in length, commencing at Charlotte, N. C., the southern terminus of the North Carolina Railroad, and running thence, via Chester and Winnsboro', to Columbia, S. C., the eastern terminus of the Greenville and Columbia, and the northern terminus of the Columbia branch of the South Carolina Railroad. This branch is 68 miles in length, and joins the main line at Branchville, S. C., 62 miles from Charleston, and 75 from Augusta. But two links are wanting to constitute it a portion of one of the great thoroughfares between the northeast and southwest, viz: from Danville, Va., to some point on the North Carolina Railroad, and from Columbia to Augusta, Ga. The Dan River Coal Field Railroad, which has been commenced with a view of connecting the Danville with the North Carolina Railroad at High Point, will shorten the time between Columbia and Richmond three hours, and will supersede the necessity of the Danville connection, which has been so long unwisely refused by the Legislature of North Carolina. In regard to the Augusta connection, a charter exists, and the country is regarded as favorable for its construction. The distance is but 70 miles, by means of which the passenger will save four or five hours. The cities of Columbia and Augusta, as well as the inhabitants along the line, and every road from Augusta south, and from Columbia north, have a direct interest in it. A road is now in actual process of construction from Charlotte north to a connection with the western extension of the North Carolina Railroad, at Statesville. It is 45 miles between these points. The grading upon 22½ miles has already been let, and the whole road to that point will doubtless be urged to a speedy completion. It is eventually to be extended via Jonesboro', Tenn., to some point on the Ohio river.

INCOME ACCOUNT.

	Dr.
To balance Dec. 31, 1858	$116,759 15
" earnings to Dec. 31, 1859	284,350 06

Construction account	600 00
Due by agents, connecting roads, etc.	45,451 48
Cash in treasury	105,826 46
	$413,543 16

The directors elected at the annual meeting, were: Wm. Johnston, A. B. Davidson, J. H. White, J. A. Young, A. B. Springs, Samuel McAliley, H. C. Brawley, E. G. Palmer, W. R. Robertson, A. R. Taylor, John Fisher and John Caldwell.

President—WM. JOHNSTON.
Treasurer—C. BOUKNIGHT.
Superintendent—T. J. SUMNER.

California.

We learn from the San Francisco *Mercantile Gazette* that an important bill, contemplating the liquidation of outstanding State indebtedness, had been introduced in the Senate by Mr. Merritt, of Mariposa, and referred to a select committee. It provides that all persons holding any legal or equitable indebtedness against the State, may, prior to August 1, 1860, but not subsequent to that date, present the same for payment at the Treasurer's office. The following are specified as the claims which are entitled to be received and liquidated under this act:

Civil bonds of the State issued under the funding acts, passed in the years 1851, '52, '53, '55 and '56, which are now outstanding and unpaid, with interest on the same to date of payment as appears by the coupons. Comptroller's warrants drawn under sanction of law for civil expenses prior to January 1, 1857, and now outstanding and unpaid. Certificates of balance issued by the Treasury Department in bonding any debt, and now outstanding and unpaid, as appears by the records. Claims against the State which accrued prior to January 1, 1857, and which have been, or may be audited and allowed by act of Legislature. Civil bonds of the State issued under act of April 28th, 1857. The Governor, Treasurer and Comptroller are constituted a Board of Examiners to receive all propositions made under this act, and award payment to the lowest bidder. The Treasurer of State is to advertise for sealed proposals, to be opened at the Capitol August 1, 1860, for the surrender of any indebtedness specified in this act, which advertisement shall state that $250,000 is appropriated to redeem said indebtedness, and the said Board accept the lowest pro-

posals at rates not exceeding par value as may redeem the greatest amount of indebtedness until the $250,000 is exhausted. The sum of $250,000 is appropriated for the payment of any claims offered for liquidation agreeably to this act.

On the 9th Feb., in response to proposals for the redemption of $75,000 of the City Bonds of 1851, the amount of $24,500 was surrendered to the Commissioners of the Funded Debt at 105 and interest. The largest amount surrendered by one party was $14,000.

The report of the State Treasurer, for the month of January, 1860, shows the following condition of the Treasury at the close of that month:

Balance on hand, Dec. 31, 1859	$402,402 93
Received from all sources during Jan.	529,858 06
Total	$932,260 99
Disbursements	133,045 77
Cash on hand, January 31, 1860	$799,215 22

The amount of funds on hand at the commencement of business, Feb. 13, was $767,469 21.

Macon and Brunswick Railroad.

This company was organized February 4, 1859, the requisite amount of subscriptions to the capital stock having previously been obtained, and steps were immediately taken to procure a competent engineer, with a view to the location of the line, which resulted in the selection of Maj. E. McNeill, by whom the preliminary survey was made in 1857. The engineer department was organized, and the location commenced in April, and completed early in June. The line, as located, commences at Macon, where it forms a common junction with the Macon and Western, and Southwestern railroads, and runs thence, in a southeasterly direction, through the counties of Bibb, Twiggs, Pulaski, Telfair, Montgomery, Appling, Wayne and Glynn, to its intersection with the Atlantic and Gulf railroad, three-fourths of a mile below the Initial Point. The whole length of the line is 175 miles.

The amount of stock subscribed at the time of the organization was about $500,000—by individuals, and by the corporations of Macon and Brunswick. The larger portion having been subscribed by the people at each end of the road, and in the counties of Twiggs and Pulaski; and the sum not being sufficient to warrant the placing of the whole line under contract, the board determined so to dispose of the means in their hands, as to confer the greatest individual benefit on the subscribers, and at the same time best subserve the general interests of the company.

With this view, two sections only were placed under construction, viz: the Northern division, commencing at Macon, and extending 37½ miles, to a point on the Dublin road, 9½ miles from Hawkinsville; and the southern division, commencing at the intersection of the road with the Atlantic and Gulf road, and extending 29 miles to Hazlehurst, on the Brunswick and Florida road—comprising in both 66½ miles.

The subscriptions to the stock of the company were paid in notes, and bonds of the cities of Macon and Brunswick, due, one-half in January, 1860, and the balance in January, 1861—the contractors receiving the stock, notes and bonds at par in payment for the grading and superstructure, in equal parts of those due in 1860 and 1861. By this means, individuals were enabled to subscribe more largely, and the work be progressing while the notes were maturing. Thus far it has been found to work remarkably well. The grading, bridging and superstructure have been let at fair prices to experienced and responsible parties, they taking one-fourth to one-third in the stock of the company. The work is progressing fairly. The above subscriptions are exclusive of those in the counties of Appling, Telfair and Montgomery, which it is thought advisable not to expend, until reaching those points.

We understand that a purchase has been made of 1,700 tons of iron, sufficient to lay about 35 miles of track. It is expected to arrive about the middle of June, at which time the track will be in readiness to receive it; and should no unforeseen accident occur, the cars will be running at least 30 miles by the 1st of October next. The road thus far has been built with greater rapidity than any other ever constructed in Georgia.

The following statement exhibits the total cost of each division, and the amount of stock taken in payment for the same by the contractors:

	Total.	Stock.
North'n Div.	$204,548	$56,838
South'n "	83,533	20,883

It is thought that these two sections, completed, in operation and paid for, will be fully sustained by the business done over each, even though the work upon the middle division should be deferred for any length of time.

The estimated cost of the whole road is as follows:

Northern Division	$420,172
Southern "	231,640
Middle "	1,084,800
Building and fixtures	49,000
Furniture	341,100
5 miles of siding	50,000
	$2,176,712

The capital stock of the company at the date of the report Feb. 3, 1860, was $565,525.

The assets of the company consisted of—

Bills receivable		$181,487 48
Subscription of City of Macon		200,000 00
" " Brunswick		5,000 00
" Contractors		77,500 00
" Individuals		5,000 00
Cash paid out	$17,867 52	
" balance on hand	33,670 00	
		51,537 52
		$565,525 00

The office of the company is at Macon, Ga. The officers are:

President—A. E. Cochran.
Chief Engineer—Maj. E. McNeil.
Principal Assistant Engineer—A. N. Rogers.
Treasurer—A. B. Dickinson.

Pennsylvania Railroad.

We learn that Thos. A. Scott, Esq., has been elected Vice President of this Company, to fill the vacancy occasioned by the death of Wm. B. Foster, Jr. Mr. Scott was General Superintendent of the road at the time of his promotion; and is succeeded in that capacity by Mr. Enoch Lewis. Mr. Lewis was superintendent of the middle division of the road under the general superintendency of H. J. Lambaert, Esq., prior to the promotion of the latter to the Auditorship of the company. It will be recollected that the present able president of the company, J. Edgar Thomson, Esq., was its Chief Engineer prior to his election to the position he now occupies.

Illinois Southern Railroad.

We learn from W. J. Stevens, Esq., of Vincennes, that work on the Cairo and Vincennes road—incorporated as the "Illinois Southern Railroad,"—is proceeding with such vigor as to promise an early completion. The track is graded from St. Francisville, Ill., to a point near Carmi, thirty odd miles, and the white oak cross-ties for this section are mostly distributed. From Carmi to Vincennes, a distance of nine miles, the grading is now being done. Mr. Crosswell, the Chief Engineer of the work, acting with Judge Wilkinson, President of the company, has accepted the proposition of the McCallum Bridge Co., of Cincinnati, for building a bridge across the Wabash river below Vincennes. —*Cin. Com.*

Copper From Lake Superior.

We have received the following statement from Mr. R. H. Rickard, No. 21 Nassau street:

Wilmington, Charlotte and Rutherford R.R.

We learn from the Wadesboro' *Argus* that the prospects of this enterprise were never brighter than at present. The *Argus* says:

The company employ on the eastern end quite a large force; some engaged in keeping up the road already laid, some in laying track, some in building trestle, and the largest force in grading the unfinished section below Lumberton. As soon as this latter force finishes in Robeson, it will move up to Richmond and continue its labors until it reaches the Pee Dee. The company have also as strong a force at the Pee Dee bridge as can well work on it. The railroad to take the rock from the quarries to the bridge site is nearly complete—the flats to convey the rock to the piers in the river are nearly ready. The machinery for raising the rock is now on the way, and the whole work will be most expeditiously done, the state of the water and weather permitting. A force of one hundred hands will shortly be put to grading the heavy sections between Charlotte and the Union Co. line; and for the grading through Anson and Union counties, reliance is placed on the citizens of the two counties. The President promises to carry off our cotton crop of 1861, if our people will have the grading finished by the time the Pee Dee bridge is ready. We also learn that track-laying will commence on the western end about the 1st of April, and by the end of the year will probably reach Shelby, fifty-four miles from Charlotte.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (----) signify "not ascertained." Land-Grant Railroads are in "*italics*."

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, March 24, 1860.

New Jersey Railroads and Canals.

In another column we have given a tabulated statement of the financial condition of the railroad and canal companies of the State of New Jersey—the same being an abstract from the official returns made for the year 1859 to the Legislature. Aggregating these, the following are the results:

Share capital paid in	$17,951,774
Funded debt	15,691,375
Other liabilities	1,856,061
Total liabilities of 18 companies	$35,499,210
Cost of the 18 works represented	32,797,916
Liabilities over cost of works	$2,701,294

—of which amount about $1,000,000 is invested in the stock of the Philadelphia and Trenton Railroad, and the remainder charged to other property held by the companies or to profit and loss. The total length of railroad in the State is 556 miles, which has cost $26,130,481, or $47,000 per mile; and the total length of canal is 148 miles, which has cost $6,666,435, or $45,000 per mile. The gross earnings on both railroads and canals for 1859 amounted to $5,785,918, and the working expenses to $2,686,174, leaving as net earnings applicable to interest and dividend, $3,099,744, or about 9½ per cent. on the cost of the works, or about 8 per cent. on the total liabilities of the companies. Of the whole number of the companies, however, only nine companies paid dividends —(See Table)—the remaining nine companies having earned a bare sufficiency to pay current expenses and interest.

Wills Valley Railroad.

This road is 82 miles long, extending from Chattanooga, Tenn., to Gadsden, Ala. According to the report of the president, made up to the 1st October last, 18 miles were in readiness for the cross-ties, and 16 more were half completed. Since then several additional miles have been completed, and are also ready for the cross-ties. In the finished portion is included nearly all the heavy work. The remainder is of so light a character that it can be finished in advance of track laying so as never to delay its progress.

The total estimated value of work done to October 1, 1859, was $108,176 52—of which $32,233 14 was paid in stock, and $75,943 38 in cash.

The number of contractors was 25; sub-contractors, 33; workmen, 233.

Much of the work on the whole line of the road has been let for half cash and half stock. Estimating the proportion for the remainder of the work to be the same as upon the completed portion, we have the following result:

Value of work done, as above	$108,176 52
Cash required to complete the 62 miles under contract	72,000 00
Do. to grade remaining 20 miles	15,000 00
Stock subscription—proportion	36,600 00
Total cost of grading	$231,776 52

—or $2,828 per mile, including all expenses. Provisions for the completion of this road are ample. The available cash subscription is $172,000—of which there has been expended $75,943 38; required for completion, $87,000; leaving an excess of cash assets of $9,056 62. To which may be added the loan of $75,000 for five years, authorized to be made to it by the Alabama Legislature—being its proportion of the Three Per Cent. Fund, alluded to elsewhere in this paper. To this should also be added the valuable donation by the General Government of 200,000 acres of land, in alternate sections on the line of the road, much of which is of the highest value as mineral and farming lands. But few roads are built that have advantages to compare with this. Forming a part of the air line road between New Orleans and New York, it can never have a competitor, while for cost of construction, it will compare with the most favored road in any part of the world.

The very small amount required to keep the road in repair, its important connections, etc., etc., offer for it so many advantages that a leading foreign capitalist has agreed to take its first mortgage bonds, in payment for iron, and the contract has been ordered to be closed by the president of the company. It is expected that the whole line, including the North East and South West Alabama Railroad, with which it connects, and with which it is eventually to be amalgamated, together with the Selma connections, will be completed in two years.

Stanstead, Shefford and Chambly Railroad of Canada.

At a general meeting of the stockholders of this road, held at Waterloo on the 5th inst., the following named gentlemen were elected Directors for the ensuing year:

Hon. L. T. Drummond, M. P. P., A. B. Foster, Esq., M. P. P., Benj. Savage, Esq., Chas. Allen, Esq., J. G. Cowee, Esq., John Williams, Esq. Ralph Merry, Esq., A. A. Knowlton, Esq., D. Russ Wood., Esq.

The following gentlemen were elected officers for the ensuing year, being the same as last:

Hon. L. T. DRUMMOND, *President.*

A. B. FOSTER, Esq., *Vice-President and Managing Director.*

L. S. HUNTINGTON, Esq., *Secretary and Treasurer.*

The stockholders passed the following resolution:

Resolved, That the Stockholders are deeply sensible of the advantage the Company has gained by having the Vice-President, A. B. FOSTER, Esq., as Managing Director; and they are well satisfied that without the talent, energy and perseverance displayed by him, and given to the Company, with his whole time, the road would by no means be in that favorable position and state of forwardness in which it now is; and they venture to express their earnest desire that the Company may continue to have the benefit of his invaluable services.

We have watched the progress of this road with considerable interest, as it is destined, when completed, to play an important part among the lines connecting the St. Lawrence with the seaboard. The resolution of the Stockholders is a compliment well deserved by the recipient, to whom may be given the credit of perseveringly and untiringly adhering to the undertaking through the most discouraging ordeals, and of bringing it to its successful state of progress. About 30 miles of the road are in operation, and 12 miles more will be

added in the course of the coming summer. The accounts of the working for the past year were very satisfactory.

Alabama and Tennessee Rivers Railroad.

This road is now completed and in operation from Selma to Talladega, a distance of 110 miles. Efforts are being made to extend it to Jacksonville, and thence to its final terminus at Gadsden, where a connection will be made with the Tennessee and Coosa Railroad, running thence to Gunters Landing, and through that road with the Winchester and Alabama, which has its northern terminus at Dechard, a point on the Nashville and Chattanooga Railroad. At Jacksonville, to which point it should be constructed with all possible speed, it will join the road now under construction to Dalton, the southern terminus of the East Tennessee and Georgia road—one of the links in the great air line extending to the most remote corner of Maine. For the purpose of hastening the completion of this southern link, a meeting of the citizens of Selma was held on the 1st inst., at which Hon. THOMAS A. WALKER, President of the company, related, in a concise manner, its present financial condition. He stated that the road could be completed from Talladega to Gadsden in less than two years, at a cost of $600,000; that the available means of the company are, the $225,000 appropriation of the Three per cent. fund, and $225,000 of the first mortgage bonds undisposed of; that along the line from Talladega, $100,000 could probably be raised; and with a like amount from the city of Selma, the road could be completed through to its terminus at an early day. The following resolution was adopted:

Resolved, That we recommend to the Council of the city, to pledge Selma for half the amount required (one hundred thousand dollars,) on condition that an equal amount shall be raised by the people of the up country interested in the completion of the road.

Dalton and Jacksonville Railroad.

This road commences at Dalton, Ga., the southern terminus of the East Tennessee and Georgia Railroad, and runs thence in a southwesterly direction to Jacksonville, in Benton Co., Ala., a distance of about 91 miles. At this point it intersects the line of the Alabama and Tennessee Rivers Railroad, running thence to Selma. This road is already completed and in operation from Selma to Talladega, 110 miles, and will probably be finished to Jacksonville in twelve or fifteen months. At the southern terminus of this road, commences the line of the Selma and Gulf Railroad, running thence to a connection with the Alabama and Florida Railroad at or near Sparta, through which, and the Mobile and Great Northern Railroad, a direct connection will be formed between Mobile and Dalton in a distance of about 380 miles. The East Tennessee and Georgia Railroad Company are deeply interested in the construction of the Dalton and Jacksonville road; indeed it is of the first importance to them, as it will give to their road immediate connection with the heart of Alabama, and her proposed netting of railroads, now set in rapid progress of construction, by the recent passage of the three per cent. appropriation bill.

The whole line of the Dalton and Jacksonville road has been surveyed and located by the Chief Engineer of the company, GEORGE WADSWORTH, Esq. The amount of work required to build this road is very light, considering the direction in which it crosses the country. He hopes to lay 10 or 12 miles of track this season—the iron for which, and a locomotive, has been contracted for. Ground has been broken within a few weeks upon the Selma and Gulf road, and proposals are invited for the grading of a portion of the line of the Mobile and Great Northern Railroad, extending from the east bank of the Tensas river to Mobile. By the time the Dalton and Jacksonville road is completed, the rail will be laid to Pensacola and also Mobile. This route will shorten the distance from Dalton to Mobile some 120 miles, and when completed will be a part of the route from New York to the Gulf of Mexico.

The office of the Dalton and Jacksonville Railroad Company is at Dalton, Ga. The officers are:

President, HON. L. W. CROOK.
Secretary, EDWARD WHITE.
Treasurer, JAMES MORRIS.
Chief Engineer, GEORGE WADSWORTH.

Selma and Gulf Railroad.

We learn from the Selma *Reporter* that work has been commenced upon this road between Selma and the Alabama river. Several other contractors are ready to begin work very soon. The connections which this road will make with the Alabama and Tennessee Rivers road, the Jacksonville and Dalton road, and the Tennessee and Virginia roads, will make it a line of great importance. A letter from a Selma correspondent of the *Reporter* says:

We have just received news of the final passage of the three per cent. appropriation bill. This gives for the Alabama and Tennessee Rivers road, $225,000; to the Wills Valley road, $75,000; to the Selma and Gulf, $40,000, and, finally, all of the amount of $633,000, besides the annual interest of near $40,000, to the Central.

The Alabama and Tennessee road should be operating to Jacksonville—85 miles from its present terminus—in twelve or fifteen months; and, in twelve or fifteen months *after that*, we shall probably have all three connections northwardly, to wit: from Jacksonville to Dalton, 91 miles; from Gadsden to Chattanooga; and from Gadsden to Guntersville and Winchester, and shortly after that the Central may be opened from Montevallo to Decatur, making the distance from Selma to Nashville only 290 miles.

This direct route would be of vast benefit to Mobile, and to Selma, also. It would make ours the great route of travel from the Gulf to all the great points of the North, East and Europe, and also of the central West.

We intend to make the Selma and Gulf a very superior road, for fast time and heavy loads. No grade exceeding 40 feet, no curve exceeding 2½ or 3 deg., and very little of this. The grade, too, is so distributed as to present no very long stretch of 40 feet continuously. In the line across Dallas and Wilcox counties, from Selma to Monroe county line, we lose only about 1¼ miles, air line from *north* bank of the river to line of Monroe, 39½ miles, and railroad, 40¾. There are some six to eight miles tolerably heavy work: but the *average* estimate for the grading, *at good prices*, will be but little over $5,000 per mile.

We want to complete the road through in two years, if possible. If Mobile will aid us a little, we can do this. She is deeply interested, as there will be *on the line* of our road near 40,000 bales, and out of the 150,000 bales and upwards that will be received at Selma in two or three years, 75,000 or 100,000 bales will pass over this road, and other articles I will not now attempt to enumerate. What the coal tonnage will amount to, no one can guess; somewhere between 100,000 and 500,000 tons, probably.

I must say, however, that I think the Dalton and Jacksonville road is now in good hands, and that good progress will be made towards Jacksonville, and perhaps make the connection in the course of two years. I know the present President, Judge Crook, of that road. He is a man of decided energy, intelligence, prudence and character, and he is anxious to make this connection, to get to the Gulf markets.

Alabama Three Per Cent. Fund.

In several articles in this week's paper we have referred to the appropriation recently made by the Legislature of Alabama for railroad purposes. We find in the Montgomery *Confederation* a condensed statement of the provisions of this bill. It is as follows:

The unappropriated balance of the Three per cent. fund, and the interest thereon as ascertained and appropriated by the last Legislature, amounted to $663,000, which has been disposed of by the recent law, as follows:

Northeast and Southwest R. R. Co.	$218,000
Wills Valley R. R. Co.	75,000
Alabama and Tennessee R. R. Co.	225,000
Selma and Gulf R. R. Co.	40,000
Cahaba, Marion and Greensboro' R. R. Co.	25,000
Opelika and Oxford R. R. Co.	50,000
Montgomery and Eufaula R. R. Co.	30,000
	$663,000

The interest has to be paid by these companies to the State Treasury, and as soon as the Tennessee and Alabama Central Railroad Company shall, in good faith, put to work in grading, bridging, &c., not less than two hundred hands, the interest, except $25,000, is to be paid to said company as the work progresses, which grading, &c., must be completed and ready for the ties, rails, &c., within five years, at which time the several companies mentioned pay over, as a bonus, to the Tennessee and Alabama Railroad Company the $663,000, which Railroad Company obligates itself by bonds satisfactory to the Governor, to finish and equip the 120 miles of road from Decatur to Montevallo within twelve months from receipt of this money. The $25,000 reserved by the State from the interest on the fund is appropriated by the bill to improve the navigation of Colbert Shoals in the Tennessee river.

Opelika and Oxford (Ala.) Railroad.

We learn from the Chambers, Ala., *Tribune*, that the entire amount ($175,000) of stock necessary to be raised before commencing work on this road, has been subscribed; and that the directors have engaged the services of C. P. ROGERS, Esq., an experienced engineer, to survey and permanently locate the road, Mr. Rogers will enter upon his duties immediately. The individual subscriptions, and the amount loaned from the three per cent. fund, reach the sum of $250,000.

York River Railroad.

We learn from the Richmond *Enquirer* that the work on this road is progressing rapidly towards completion. The bridge across the Pamunkey, at the White House, will be finished in April, and the trains run through to the terminus, at West Point, in June. A splendid steamer will then be put on the line to Norfolk, making the run in a few hours.

Laurens (S. C.) Railroad.

At a recent meeting of the directors of this road, Dr. JNO. W. SIMPSON was elected President to fill the vacancy occasioned by the death of Col. James H. Irby, late President.

Cleveland and Mahoning Railroad.

MARTIN BENTLEY has been appointed Secretary and Treasurer of the Cleveland and Mahoning Railroad, in place of O. M. Burke, who retires in consequence of ill health.

FINANCIAL.

The closing cash prices at the New York Stock Exchange for each day of the week ending 21st March, 1860, were as follows:

New York and Erie Railroad.

The annexed official figures of the earnings of this road since it passed into the hands of the Receiver, show that during four months it earned nearly enough net to pay the interest on its bonded debt, which is a better result than was anticipated:

The earnings and expenses of the New York and Erie Railroad, under the Receivership, from August 16, to Dec. 31, 1859, four and a-half months, were as follows, viz:

Earnings from August 16th, to December 31st, 1859	$2,037,900 72
Expenses during the same time	1,359,415 20
Net earnings	$678,485 52
Int'st on mort. d't, 4½ mos.	$473,011 87
Do. on unsecured d., 4½ m.	190,076 24
Rent of other roads, 4½ m.	48,901 00
	711,989 11
Deficit to pay interest on whole debt	$33,503 59

The comparative statement for the same period, 4½ months of 1858 and 1859, is as follows:

	1858.	1859.
Earnings	$1,942,487 05	$2 037,900 72
Expenses	1,375,514 14	1,359,415 20
Net earnings	$566,972 91	$678,485 52
Interest on debt and rent of roads	706,173 00	711,989 11
Deficit	$139,200 09	$33,503 59

Receipts from all sources from Aug. 16 to Dec. 31, 1859		$2,424,453 46
Payment on liabilities incurred previous to Aug. 16	$1,109,413 19	
Payment on liabilities incurred since Aug. 16th	1,287,865 27	
		2,397,278 46
Balance on hand Dec. 31, 1859		$27,175 00

Georgetown Water Works.

The Washington *Evening Star* gives us an interesting account of these Works, now nearly complete, under the supervision of Capt. M. C. MEIGS, U. S. Engineers, an officer of deservedly high reputation, in the department of design and construction. The Washington Aqueduct supplies Georgetown, on its route to the Capital, assisted for the elevation of one hundred feet above tide by the water pressure engines, built by Mr. H. R. WORTHINGTON of New York, with his usual care and ingenuity, in pumping machinery. They are reported as working with but ten per cent. loss of power.

The length of distribution in use, is 8.78 miles, of which 42,313 feet is four-inch, and 2,941 feet six-inch pipe. Part of this pipe, we understand, is of wrought iron, lined with cement, an improvement which is destined to take an important rank. There are 79 fire-plugs and 105 public hydrants.

The total cost of the works is stated at $33,937; and this is to be paid in four annual instalments, taxed on the citizens, at the total levy of 60 cents per foot fronts. This system in four years gives the people of Georgetown *free water*, and is highly creditable to their enterprise, as this is the first modern city on record, endowed with a free supply.

Missouri Railroad Bill.

The bill granting additional aid to the railroads of this State, which has just been passed by the Legislature, appropriates $1,420,000 to the Pacific road—of which $280,000 is for the payment of the floating debt, and the remainder for the construction of the road, at the rate of $50,000 for every five miles built; $750,000 to the Southwest Branch, upon the dollar for dollar plan; $966,000 to the North Missouri road—$280,000 of which is to be applied south of the junction with the Hannibal and St. Joseph, and the balance at the rate of $12,000 per mile to the road north of the junction; and $1,000,000 to the Iron Mountain road, at the rate of $10,000 per mile.

The St. Louis *Evening News*, from which we have derived the above particulars, adds:

It will carry the main trunk of the Pacific road to the western border of the State; the Southwest Branch to Springfield, and perhaps to Newton county; the Iron Mountain to the southern boundary, whence the people of Memphis and Arkansas stand pledged to prolong it to a connection with the southern system; and the North Missouri to a point from which the people of Iowa are prepared to carry it northward into their State. It adds $4,136,000 to the railroad appropriation of the State; but, by the time the additional bonds have been expended, it will have added not less than $20,000,000 to the wealth of the State, and given us, completed, a system of roads, which, though costly, will be unsurpassed in comprehensiveness and beneficence.

FUNDAMENTAL IDEAS OF MECHANICS AND EXPERIMENTAL DATA by A. MORIN. —D. Appleton & Co. 8vo. pp. 450.

This is a translation from the admirable book entitled "Arthur Morin's Legons de mecanique pratique" and is a most valuable contribution to our English Mechanical Literature. The translator, Mr. JOSEPH BENNETT, Civil Engineer of Brooklyn, has accomplished a task which few are competent to perform. To a thorough understanding of the subjects treated must be added an intimate knowledge of the French language. No translations are so difficult, as those of technical works of this kind. With few exceptions the terms of measurements have been reduced to the English standards so as to make the matter more conveniently available, and the mechanic and engineer will find no work more complete in practical formulæ upon the branches treated. We entirely agree with the translator in his preface where he says: "The Mechanic and Engineer must look to practical formulæ for ready aid in producing harmonious combinations of strength and dimensions" * * * *

"It is a matter of regret that so little has been done in our country towards establishing them." * * * * "The recent calamity at Lawrence (Mass.) cries out in thunder tones against the merciless destruction of life, and most painfully shows that too much care and skill cannot be exacted of our constructors." * * * "It is to be hoped that our Government may yet take in hand a matter that cannot well be done at individual cost and thus institute a series of experiments, so that for the strains of wood and iron, for the properties of materials, and general experimental results, there may be found many an able native Barlow, Fairbairn or Morin to elicit valuable information and supply the great void existing in the testing of our own materials."

We are lamentably deficient in this respect, and if some one of our Congressional legislators would bring about the passage of a bill establishing a scientific Board for the purpose of experimenting upon our own various materials, and publishing the results in some convenient and available form, he would merit the gratitude of every engineer and mechanic in the country. No subject commends itself more to the attention of our Government than this, for nothing has a more intimate bearing upon our progress in all the great movements of the age in which we live.

Nashville and Northwestern Railroad.

In about a week the work of track-laying will be commenced on the Nashville and Northwestern (Nashville to Paducah) Railroad, and it is expected to have twelve miles completed and the cars running on the same by the first of July. The track-laying will be commenced at the depot of the Louisville and Nashville Railroad, so as to form an immediate connection with that road. A connection will also be eventually formed with the Nashville and Chattanooga Railroad.

A branch of this road is to go to Henderson, a short distance on the Ohio river below Evansville. It will furnish a southern outlet to the Evansville and Indianapolis road, which, we hope, will be completed at no very distant day.

Maryland Legislation.

The Legislature of this State adjourned on the 10th inst. Bills passed both houses, authorizing the city of Baltimore to endorse the bonds of the Northern Central Railroad Company to the amount of $500,000; and releasing the Susquehanna and Tide Water Canal Company for the payment of compound interest on the debt due the State; also a bill authorizing the city of Baltimore to guaranty the mortgage bonds of the Western Maryland Railroad Company to an amount not exceeding $250,000. The bill appropriating the balance of one million of dollars to the Eastern Shore Companies, alluded to in a former number, which was passed, proposes that the sum be paid from the surplus revenues of the State Treasury within the next four years.

Taxable Property in Pennsylvania.

The Board of Revenue Commissioners have fixed he aggregate valuation of taxable property in this State at $569,049,995. Of this amount, $563,577,795 is subject to a tax of 2.5 mills on the dollar; $5,290,336 to a tax of one per cent., and $181,864 to a tax of two per cent. The following is the valuation of the city of Philadelphia: Property subject to a tax of two and a half mills, $164,556,282; to a tax of one per cent., $2,780,793; to a tax of two per cent., $59,650. The aggregate increase of the valuation of taxable property in Philadelphia, since the assessment of the last Board, three years ago, is $4,417,072.

Lamothe's Iron Car.

Railroad companies desirous of making use of *iron* cars are referred to the advertisement in another column of E. W. Sargent, Esq., who is prepared to treat for the manufacture, or sale of the right to manufacture of cars built upon Lamothe's patent. We have previously described Lamothe's plan, and also a passenger car recently built upon it, now running upon the Boston and Worcester Railroad, and which has elicited high approbation from all parties who have examined it. It is a model of good workmanship, and tasteful design and finish. Iron cars can be built as cheaply as wooden, and there can be no doubt of their general adoption, particularly in the Southern States where the climate is destructive to wooden structures.

Pennsylvania Railroad Machine Shops.

The Harrisburg *Telegraph* says that the plans and specifications for the new machine shops of the Pennsylvania Railroad Company at that place have been prepared, and that their construction will shortly be commenced. One of the buildings will be three hundred feet in circumference, and calculated to hold eighty five locomotives. The shops, when completed, will give constant employment to about one thousand workmen.

Illinois Southern Railroad.

The County Court of Pulaski county (Ill.) have subscribed $50,000 in bonds to the Illinois Southern Railroad, to be expended in that county. This road will be of great advantage to Mound City and the country immediately adjacent.

☞ The last rail of the connection between the Balt. and Ohio and the Marietta and Cincinnati Railroads, was laid at Belpre, opposite Parkersburg, on the 14th inst. Nothing but a short and convenient ferry by steamboat now separates Baltimore from Cincinnati by this southern and short line of railroad.

Railroad Earnings.

The February traffic return of the Baltimore and Ohio Railroad is as follows:

MAIN STEM.

From Passengers	$39,651 72	
" Mails	7,833 33	
" Express	4,831 85	
" Tonnage	220,718 69	
		$273,035 59

WASHINGTON BRANCH.

From Passengers	$28,890 97	
" Mails	1,000 00	
" Express	1,250 00	
" Tonnage	5,689 66	
		36,830 63

N. W. VIRGINIA BRANCH.

From Passengers	$2,285 59	
" Mails	866 67	
" Tonnage	19,445 30	
		22,877 55
Total earnings		$332,743 77

The following is a comparison of the revenue of the road for the months of February, 1859 and 1860:

	1859.	1860.
Main stem	$247,319 49	$273,035 59
Washington branch	34,427 94	36,830 63
N. W. Virginia branch	19,884 35	22,877 55
Totals	$303,631 78	$332,743 77
		303,631 78
Net increase, February, 1860		$29,111 99

The following statement shows the business of the Philadelphia and Reading Railroad Company, for the month of February, 1860, compared with the corresponding month of last year:—

	1860.	1859.
Received from coal	$102,795 91	$95,369 25
Do. merchandise	42,807 88	37,578 80
Do. travel, etc.	26,237 68	24,379 18
	$171,841 47	$155,327 23
Transportation, roadway, dumpage, renewal Fund, and all charges	113,302 25	96,258 19
Net profit for the m'th.	$58,539 22	$59,069 04
Do. for previous 2 mos.	162,490 58	157,313 01
Total net profit for 3 months	$221,029 80	$216,382 05

The earnings of the Watertown and Rome Railroad for February were as follows:

	1859.	1860.
Passengers	$8,814 95	$9,082 83
Freight	9,416 38	9,903 26
Other sources	1,115 07	1,575 40
Totals	$18,947 30	$20,561 49
Increase		$1,614 19

The earnings of the Scioto and Hocking Valley Railroad for February were $7,805 34
Expenses 4,084 89
Net earnings $3,220 45

Railroads and Canals of New Jersey.

Anthracite Coal Trade.

The Philadelphia *Mining Register* thus notices the several changes which have been made during the past year, with reference to the places of shipment of Lehigh coal, viz:

The actual abandonment of Trenton, whence the trestling from which the cars were unloaded into boats has been removed to South Amboy, and the virtual abandonment of Bristol, where the Lehigh Navigation Company have ceased to occupy the large wharf at the pool of the canal, heretofore rented by them. Coasting vessels would not penetrate to Trenton by canal from the New York waters, and coasting vessels will not ascend the Delaware above Philadelphia to take freight at Bristol, except at rates which more than cover the cost of freight and tonnage in canal boats from Bristol to Philadelphia. The trade, therefore, will be transferred from Trenton to South Amboy, and from Bristol to Philadelphia. The arrangements entered into by and between the two Schuylkill carriers give general satisfaction to all reasonable people interested, *in any way*, in the Schuylkill trade. And the understanding had with the New York companies, it is predicted, will produce results mutually advantageous to all parties en-

gaged in the production and transportation of anthracite coal.

Journal of Patent Law.

WHEN NECESSARY TO APPLY FOR A PATENT. PROTECTION GIVEN TO INVENTOR WHILE PERFECTING THE DETAILS OF HIS INVENTION.

The law gives to the inventor a prescriptive right to the use, manufacture and sale of his invention for fourteen years. This the law adjudges to be sufficient to adequately remunerate the inventor for his inventive talent, skill and industry. After the expiration of these fourteen years the Patent Laws contemplate the resignation of the patent by the inventor to the free competition of the public. They thus secure what is right and just to the inventor and at the end of the term demand what is equally right and just for the State.

Applying these principles, the law will not allow the Patentees to first part with their invention, or with the right to use their invention, afterwards secure a patent, and then by injunction restrain the parties to whom they previously gave the right to use it, from enjoying that right. It will, however, protect the inventor from any persons who fraudulently attempt to get possession of his invention before he has patented it, and while he is endeavoring to perfect the details of it.

The case of Winser *vs.* Kendall *et al.* recently decided in the United States Supreme Court, illustrates the above points. This was an action for the recovery of damages for an alleged infringement by the defendants of the plaintiff's machine for manufacturing harness. One of the defences of the defendants, was that given by the act of Congress, passed March 3, 1839, and which reads as follows: "Every person or corporation who has or shall have purchased or constructed any newly invented machine, manufacture or composition of matter, prior to the application of the inventor or discoverer for a patent, shall be held to possess the right to use and vend to others to be used, the specific machine, manufacture or composition of matter, so made or purchased, without liability therefore to the inventor, or any other person interested in such invention."

In the support of the above defence, evidence was introduced upon the trial, tending to show that the plaintiff constructed a machine in substantial conformity with his specification, as early as 1846, and that, in 1849, he had several such machines in operation, on which he made harness to supply all such orders as he could obtain: that he continued to use these machines until he obtained his Letters Patent: that he repeatedly declared to different persons that the machine was so complicated that he preferred not to take a patent, but to rely on the difficulty of imitating the machine, and the secrecy in which he kept it. The defendants also gave evidence tending to prove that the first of their machines was completed in the autumn of 1853, and the residue in the autumn of 1854, and that in the course of that Fall the plaintiff has knowledge that the defendants had built, or were building, one or more machines like his invention and did not interpose to prevent them.

The plaintiff gave evidence tending to prove that the first machine built by him was never completed so as to operate: that this second machine was only partially successful, and improvements were made upon it: that in 1849 he began four others and completed them in that year, and made harness upon them, which he sold when he could get orders; that they were subject to some practical difficulties, particularly as it respected the method of making the harness, and the liability of the bobbin to get out of the clutch; that he was employed in devising means to remedy these defects, and did remedy them; that he also endeavored to simplify the machine, by using only one ram shaft: that he constantly intended to take Letters Patent when he should have perfected the machine: that he applied to his attorney for this purpose in February, 1853, but the model and specification were not sent to Washington till November 1854; that he kept the machine from the view of the public, allowed none of the hands employed in the mill to introduce persons to view them, and that the hands pledged themselves not to divulge the intention; that among the hands employed was one Kendall Aldridge, who left the plaintiff's employment in the autumn of 1852, and entered into an arrangement with the defendants to copy the plaintiff's machine for them, and did so, and that it was by Aldridge and under his superintendence, and by means of the knowledge which he had gained while in the plaintiff's employment under a pledge of secrecy, that the defendant's machines were built and put in operation; and that one of the defendants had procured drawings of the plaintiff's machine and had taken out Letters Patent for it in England.

At the Circuit Court the case was decided in favor of the plaintiff; but the defendants (upon exceptions to the charge of the judge) appealed to the Supreme Court. The following is the opinion of the appellate court.

DANIEL, J.—The defence must depend exclusively upon the proper construction of the section of the law above cited, and the application of that section to the conduct of the parties as shown by the bill of exceptions. It is undeniably true that the limited and temporary monopoly granted to inventors was never designed for their exclusive profit or advantage; the benefit to the public or community at large was another and doubtless the primary object in granting and securing that monopoly. This was at once the equivalent given by the public for benefits bestowed by the genius and meditation and skill of individuals, and the incentive to further efforts for the same important objects. The true policy and ends of the patent laws enacted under this government are disclosed in that article of the constitution, the source of all these laws, viz: "to promote the progress of science and the useful arts;" contemplating and necessarily implying their extension and increasing adaptation to the use of society. By correct induction from these truths, the inventor who designedly, and with the view of applying it indefinitely and exclusively for his own profit, withholds his invention from the public, comes not within the policy or object of the constitution or acts of Congress. He does not promote, and if aided in his design, would impede the progress of science and the useful arts. And with a very bad grace could he appeal for favor or protection to that society which, if he had not injured, he certainly had neither benefitted, nor intended to benefit. Thence, if during such a concealment, an invention similar to or identical with his own should be made and patented, or brought into use without a patent, the latter could not be inhibited or restricted, upon proof of its identity with a machine previously invented, and withheld and concealed by the inventor from the public. The rights and interest, whether of the public or of individuals, can never be made to yield to schemes of selfishness or cupidity: moreover, that which is once given to, or is invested in the public, cannot be recalled or taken from them.

But the relation borne to the public by inventors, and the obligations they are bound to fulfill in order to secure protection from the former, and the right to remuneration, by no means forbid a delay requisite for completing an invention or for a test of its value or success by a series of sufficient and practical experiments; nor do they forbid a discreet and reasonable forbearance to proclaim the theory or operation of a discovery during its progress to completion, and preceding an application for protection in that discovery. The former may be highly advantageous as tending to the perfecting the invention: the latter may be indispensable, in order to prevent a piracy of the right of the true inventor. It is the unquestionable right of every inventor to confer gratuitously the benefits of his ingenuity upon the public, and this he may do either by express declaration or by conduct equally significant with language—such, for instance as an acquiescence, with full knowledge in the use of his invention by others, or he may forfeit his right as an inventor, by wilful or negligent postponement of his claims, or by an attempt to withhold the benefit of his improvement from the public until a similar or the same improvement should have been made and introduced by others. Whilst the remuneration of genius and useful ingenuity is a duty incumbent upon the public, the rights and welfare of the community must be fairly dealt with and effectually guarded. Considerations of individual emolument can never be permitted to operate to the injury of these. But whilst inventors are bound to diligence and fairness in their dealings with the public, with reference to their discoveries, on the other hand, they are, by obligations equally strong, entitled to protection against frauds or wrongs practised to pirate from them the results of thought and labor, in which nearly a life time may have been exhausted—the fruits of more than the *virginei annorum lucubrationes*, which fruits the public are ultimately to gather. The shield of this protection has been constantly interposed between the inventor and the fraudulent spoliator by the courts in England; and most originally and effectually has this been done by this court in the cases of Pennock & Sellers *vs.* Dialogue, and Shaw *vs.* Cooper. The real interests of an inventor with respect to an assertion, or surrender of his rights, under the constitution and laws of the United States, whether it be sought in his declarations or acts, or in forbearance or neglect to speak or act, is an inquiry or conclusion of fact, and peculiarly within the province of the jury, guided by legal evidence submitted to them at the trial. The instructions from the judge at the Circuit Court in this case we consider to be in strict uniformity with the principles hereinbefore propounded, and with the doctrines of this court, as declared in the cases of Pennock &

Sellers *vs.* Dinlogue, and Shaw *vs.* Cooper. The decision of the Circuit Court is affirmed, therefore, with costs.

RADLEY & HUNTER'S
IMPROVED
SPARK ARRESTER.

RADLEY & HUNTER'S CELEBRATED NEW INVENTION is now offered to the public as a **Perfect Spark Arrester**, which possesses the advantage over ALL OTHERS of being of the **most simple construction,** and much more **durable** than any ever used. The manufacturer invites an examination of this Arrester by the Railroad public, confident that it will meet with **universal approbation.**

The undersigned hereby gives public notice that he is the **sole manufacturer** of the above article under the Radley & Hunter Patent, of whom alone they can be purchased in the United States.

EDWIN R. BENNET,
Office 82 Duane St., New York.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists of Thousands of Gallons, **prove** this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The *Scientific American* and *Manufacturer's Journal,* after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

CEMENT, PLASTER, ETC.

THE HUDSON RIVER CEMENT CO.

HAVE commenced manufacturing for the season, and can now furnish a very superior article of fresh **Rosendale Cement, Calcined Plaster, Farmers' Plaster** and **Marble Dust.** Address

JOHNS & CROSLEY.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Victoria Bridge.

(Continued from p. 244.)

The superstructure itself aids the stability of the piers by acting as *struts* between the piers acted upon, and the others. It may be said that this would not be the case in a tubular bridge as the ends rest upon *friction rollers* to allow the tube to contract and expand under changes of temperature, and hence no great service of this kind could be rendered by them.

This would be another item of comparison in considering the relative advantages of a wooden superstructure, which could have fixed seats at the top of the piers, thus assisting them in resisting lateral pressures of this kind.

The effect of these movements has been overrated and the aggregate force, generated out of them, has erroneously been considered as effective.

Mr. Liddell, in support of the proposition that *the force of the ice is greater in appearance than reality*, quotes Mr. W. Tierney Clarke's description of the ice movements in the Danube, at Pesth, during the erection of the Pesth Bridge—as follows:

"The ice continued firm until the 17th of Jan'y, when about 3 P. M. it began to move in one unbroken sheet, from the Dolphin, where it had parted, to the Buda shore. A few minutes afterwards it began to move from side to side with great violence. A stage on which were three pile engines for driving the piles in the upper part of the dam, was carried away by the enormous force of the ice, which came crushing on till it touched the outer row of the piles of the dam, when after a squeeze which threatened to smash every timber, *the ice broke up into pieces which kept rising up as if forced on by the pressure behind, and formed an embankment against the side of the dam.* This lasted about ten minutes, and the first squeeze was the worst the dam had to contend with, and not the *slightest damage*, if we except that to the small stage above mentioned, was sustained."

"After the ice had got fairly in motion and attained the velocity of the current, the noise and uproar of the immense masses cracking and crushing against one another, and against the Dolphin and the dam, was tremendous and altogether formed a scene it would be difficult to describe. Sometimes a stoppage would take place owing to the *accumulation* of ice between the Dolphin and the dam, which kept that above back until a mass of ice more resembling an island than anything else it can be compared to, would force the whole mass before it, breaking up the large blocks accumulated at the dam into a thousand pieces."

"Considerable excitement prevailed at Buda Pesth, and even at Vienna, owing to the different opinions as to whether the Dolphin was sufficiently powerful to resist the pressure it was subjected to, and heavy bets were laid on the issue. The result, however, was most satisfactory, for with the *exception of the fender piles* which were somewhat worn and damaged by the ice, *not the slightest harm was done either to the Dolphin or the dam.*"

Mr. Liddell says in relation to the phenomena of the packing and shoving of ice as they affect the form and dimensions of the piers. "When the ice packs it is in consequence of meeting with some obstruction. Single pieces of no great size strike against the obstruction with a certain momentum in consequence of which the pieces slide over or under each other and get packed. But at the season of packing this ice is *brittle and friable* being new formed and mixed with snow, and its momentum is *chiefly consumed by crushing in the act of packing*, so that the momentum of large masses of this ice will be of *infinitely less* power against the piers of a bridge than what might arise from the direct shove or pressure of a field of hard ice. But to counteract the greatest weight of ice and dammed water that can possibly press at once upon the bridge in the site in question, *I am convinced, requires only a moderate sized pier of good masonry.*

To facilitate the disruption of ice *fields* coming against the piers, the latter must of course be provided with substantial ice breakers against which the floating ice may be broken up. Thus the piers will be protected from its direct action and *packing* at the bridge be *prevented.*"

In the feeling of awe and almost terror with which we are impressed upon witnessing the steady and majestic march of these masses, and in the estimate we form of their irresistible power, we forget that the inherent properties of the material of which they are composed, forbid the exertion of this power except in their own destruction. Measure their weight by millions of tons, and their velocity by miles per hour, and from these elements obtain their aggregate momentun, and in our wonder at the magnitude of the product, we lose sight of the fact that instead of this vast force being able to overwhelm and destroy everything in its path, it simply serves to crush the materials out of which such an amount of power was created. It requires the hard dry ordeal of facts and figures to get at the actual effects and the "poetry of engineering" will only lead us astray.

The conclusions to which such figures lead me is that a far larger margin of safety was provided for in these piers than even the most cautious engineering would call for; that if they had been constructed with a top of 12 feet in width, (amply sufficient for the bearings of the bridge,) they would have had enough strength to resist every possible force that can be brought against them. The saving consequent upon such a reduction would be 8,000 yards, which at £6 per yard would amount to £48,000.

I conclude then that without interfering with

the construction of embankments or tubes or the general arrangements of spans and assuming all these to be what they should be and that the price paid for the work done, was fair, the following amounts were expended uselessly in avoiding dangers and difficulties only existing in the imagination of engineers:

In the abutments	£100,500
In the piers	120,000
	£220,500

—or $1,102,500.

These are simply *parings*, and do not, by any means, go to the root of the matter. But in these calculations I have confined myself to the first proposition, viz: that conceding the necessity for the excessive cost of foundations and that the general design of the bridge is precisely what is required under the circumstances, a great saving might have been made in the masonry. Parings to the extent of over 43 per cent. in an expenditure of $2,550,000, however, make up a very respectable sum and in this case, the amount is equal to nearly ¾ of the entire cost of the whole structure as designed by Mr. Keefer, or more than ½ the cost of a sufficient structure as estimated by Mr. Liddell.

The next question, then, is whether there was any actual necessity for such an expenditure as £440,000 for the foundations of the piers.

Mr. Keefer's plan for foundations has been before described as consisting of *shoes* or *cribs* of timber work filled with stone, covering a large surface on the bottom having an inclined surface at their upper ends. Out of the centre of these shoes was to spring the piers of square masonry. As Mr. Keefer's long residence in the country, and his great experience, according to Mr. Stephenson, "entitles his opinion as to the proper character of *such works* to *confidence*" we may place equal confidence upon his estimate of their cost.

This may be divided as follows:—

Cribwork shoes	£75,000
Piers	90,000
Abutments	15,000
Approaches	25,000
Superstructure	115,000
Total	£320,000

Now the cost of similar items in Mr. Stephenson's estimate is as follows:

Foundations	£440,000
Piers	360,000
Abutments	150,000
Approaches	50,000
Superstructure	400,000
	£1,400,000

The top of the shoes designed by Mr. Keefer was at 30 feet above summer level. Up to this level, then it would be fair to compare the cost of the two plans; but first it will be necessary to deduct the cost of the *abutment* cribs from the total, as these are included in the above estimate. The total number of cribs being 24, an average would be £3,125 each, calling the abutment cribs £2,500 each, the cost of the remaining cribs would be £70,000. The masonry above the 30 feet level on Mr. Keefer's piers would amount to about £21,000, at a proportional cost, leaving the cost of the remaining masonry, and the cribs £144,000. The amount of masonry in the piers of Mr. Stephenson's plan above the 30 feet level is about the same, amounting to £54,000, leaving the cost of the remaining masonry in the piers, and the foundations £746,000. Up to the 30 feet level then the actual difference of cost is £602,000. To obtain the same amount of water-way by Mr. Keefer's plan, with similar openings, would, however, require the side spans to be 300 feet each, with a centre span of 400 feet, increasing the total length of superstructure from 6,600 to 7,950. The increase of cost due to Mr. Keefer's arrangement of spans if tubes be taken as a criterion at a fair rate per foot would be $167,000, so that the saving would then have been £435,000. But this increased length of bridge would again have reduced the length of embankments from 2,000 feet to 650, and as this reduction would have been in the highest portions, it is fair to assume it at four-fifths the whole cost—amounting, according to Mr. Stephenson's estimate to about £40,000. This, then, would increase the saving to £475,000. It is quite evident however that the cheaper the description of superstructure upon which this estimate is based, the less would be the increase of cost, due to the longer bridge and the longer spans, and it would be just as fair to take Mr. Keefer's estimate for his wooden superstructure, and estimate the difference between the cost of 6,600 feet in length in spans of 242 feet each, and the cost of 7,950 feet in length in spans of 300 feet each. Making the comparison in this way then, based upon a wooden superstructure and the difference in favor of the short span, would be only about $25,000. The actual difference then between the cost of Mr. Keefer's foundations and Mr. Stephenson's would be £577,000. But Mr. Keefer says that the width of his cribs is to protect "the foot of the arches which are the lowest and most exposed portions." For tubes therefore or any other plan of superstructure, whether wood or iron, which did not involve the necessity for these exposed arches so great a width of cribs would not be required their cost would be decreased, and so great an increase in the length of spans would not be necessary. I submit therefore that in the comparison I have made, I have given every advantage to Mr. Stephenson's piers.

It is a simple question as to the adaptability of wooden cribs to such localities, viz: their resistance to the crushing force of the ice, and their annual depreciation and decay. Of the capacity of of timber work of this kind to resist such action, Mr. Keefer had an example before him in the Bon Secour's market, in reference to which he says, that "though probably there is no point where the ice strikes with greater force than against this wharf, yet this cribwork has resisted the shock and forced into the air a broken heap of fragments." The stability of the wharves at Montreal, the wharf of the Champlain Co. at St. Lambert, the wharves at Longueiul, and the more recent one built by the Grand Trunk Railway Co. at Point St. Charles, projecting out immediately below the first three openings of the Victoria Bridge, where Mr. Ross says "the current surcharged with ice attains such irresistible velocity," and the instances cited where such structures, even coffer dams, have resisted the most violent movements are sufficient to warrant the belief that not the slightest fear need have been entertained in adopting such expedients. I will give one more instance in point which I think will convince any unprejudiced mind that when all the conclusions of Mr. Keefer's experience were thrown aside, a decision was made costing those who furnished the funds for the Victoria bridge at least a half million pounds in the piers alone.

In the year 1846 the peculiar character of the winter in New England, was such as to produce, in some of the larger rivers, ice phenomena fully as remarkable as any ever known in the St. Lawrence.

I refer to the memorable *ice* freshet on the Penobscot, the largest river in New England, which completely submerged the business portion of the city of Bangor, carrying off all the bridges in that city over that river and its tributaries, by lifting them directly from their seats.

In December of the previous year, the river was swollen to a great height by a violent storm, which, as is usual in that climate, cleared off with the weather intensely cold from the northwest. In a day or two the *anchor* ice began to run very freely. As soon as it reached the tide-water at Bangor, where the current is checked, this part of the river was frozen over, forming a dam or rampart to the ice above. This dam rapidly extended itself up the river, throwing the water back, raising it frequently 30 or 40 feet. The free flow of the water being thus checked, the pools formed were converted into solid masses of ice extending nearly to the sources of the river. The winter was of great severity, no thaw occurring till the 13th of March. A succession of thaws and rains then set in, raising the river to such a degree as to lift the immense masses of ice formed in the manner described, which came down in a perfect avalanche. I may here remark that the river from Bangor to Milford, 13 miles, presents a succession of rapids and pools, similar to those described in the St. Lawrence. The floating mass, on reaching the still water ice at Bangor, which was of great thickness and strength, was instantly arrested, and packing together formed a dam or mass at least 50 feet high from the bed of the river, extending several miles, and entirely flowing out the first rapids above Bangor. The bridge over the Penobscot at Bangor is just at the foot of the lower rapid, and the current at ebb tide strikes against the piers with great force. The bank for some miles above are precipitous, and allow no escape of the water. The whole fall is about 100 feet. When the obstruction below gave way, which it did instantaneously, the whole mass moved down with great swiftness, owing to the immense head accumulated above. The bridge which had been lifted from its seat, passed down for some distance unbroken. It was the general expectation that the piers, which were crib work up to low water mark, surmounted by ashler masonry, laid without cement, and filled in with rubble, would have been swept away by what appeared to be a resistless mass of ice, reaching many feet above them; but, to the surprise of all, they were found to be entirely uninjured, only a few stones having been pulled off the down stream portions of their tops. They had not the slightest support from each other, while the masses of ice brought against them, were many of them at least 15 feet in thickness and of the firmest texture. These immense masses were formed in the pools, produced by the damming of the ice when the river froze up, and which, as the water gradually receded, were converted into solid ice. Phenomena on a scale so

striking does not occur in the St. Lawrence, as that river is unaffected by rain, and the constant succession of lakes in its course, serve as reservoirs to hold the water thrown back by ice dams, till the current has cut a channel through them, which it will do in a short time. The piers of the Penobscot bridge were about 45 feet high, 20 feet long at their tops, and 10 feet thick. Their up river ends having an inclination of about 45°, and capped, or sheathed, with thick plank. The old piers were repaired, and the new superstructure placed upon them. I refer to this case to show that the *crib-work* foundation; with masonry superimposed, is adequate to the severest test to which it can be subjected by ice freshets, and to prove that the "*ordinary expedients of American engineers*" to provide against them, are simple deductions from experience, which are entitled to outweigh any *theories* upon the subject, no matter the degree of r putation by which they may be backed.

Upon the question of annual depreciation and decay of timber structures, such as were designed, a few words will suffice. In the first place, these cribs, below summer water, may be considered imperishable. The piers were designed to start from a point *below* this level; hence any decay of the portion *above* summer level could occur without interfering at all with the permanency of the piers, and could readily be renewed. It is simply the portion between summer level and high water which is necessary to take into consideration.

As an average, about two-thirds the cubic contents of these cribs would be above water. (The total cost being £75,000.) £50,000 is the amount subject to depreciation. As at least half of the cost would consist of the stone filling, there would be but £25,000 of perishable material, and ten per cent. depreciation on this, would be a very large annual per centage. This would amount to but £2,500 per annum on the whole number of piers.

(To be continued.)

Mobile and Ohio Railroad.

The annual meeting of the stockholders in this road was held in Mobile on the 20th ult. at which the following gentlemen were elected directors for the ensuing year, viz: Milton Brown, Wm. Jones, Jr., Jonathan Emanuel, D. W. Goodman, J. C. Rupert, C. P. Gage, M. H. Bloodgood, Robert A. Baker, C. K. Foote, C. W. Williams, James Whitfield, L. M. Cunningham, and John J. McRae. The report of the directors for the fiscal year ending December 31, 1859, was presented. From this we learn that during the past year the track has been laid on the Columbus, (Miss.) Branch 18½ miles to the western bank of the river; on the main trunk line, from West Point north to Okalona, 29 miles; and from Jackson, (Tenn.) southward, 2 miles—making an increase of completed track, in running order, of 44½ miles; and 14 miles of small iron, laid in main track, has been replaced with heavy rails. The whole length of finished road at the close of 1859, was 363½ miles. The piers and abutments of the bridge over the Bixby river were completed, and the superstructure ready for raising. Contracts had been made with responsible and reliable parties for the completion of the road from Okalona north to the Tennessee State Line, and for 37½ miles southward from Jackson, Tenn. Proposals were also under consideration, for the remaining 15½ miles in Tennessee, to be finished simultaneously with the work in Mississippi. By these contracts, the entire road is to be completed and cars running from Mobile to Columbus, Ky., by the close of the present year. In anticipation of this event, and the large increase of business it will produce, contracts have been made for 30 additional locomotives, and the trucks and iron works for 350 additional freight cars, to be delivered in season for the transportation of the next crop.

The earnings of the north division of the road, extending from Jackson, Tenn., to Columbus, Ky., 87 miles, have been:

From Passengers		$74,438 93
" Freights		56,766 39
" Mails, express, etc.		15,417 20
Total earnings north division		$146,622 52
And the expenses:		
For repairs of roadway	$24,323 29	
" machinery	4,855 09	
Conducting transportation,	38,067 81	
		67,246 19
Leaving a net revenue of		$79,376 33
Paid interest on debt of above division		54,240 00
Balance		$25,136 33

The mileage of passenger trains on this division was 87,794; freight trains, 28,440; construction trains, 14,762—total 142,011. The earnings per mile of road were $1,689 90; and the expenses $773 61—net earnings $916 29. The earnings per mile run by trains $1.03; the expenses, 48 cts.; net earnings, 55 cts. Miles run to the cord of wood, 41½; to one gallon of oil, 239½. There were transported upon this division 8,269 bales of cotton, and 2,823 hogsheads of tobacco.

The earnings of the south division, from Mobile to Okalona, and including the Columbus Branch, have been:

From passengers		$221,438 90
" freight		722,885 95
" mails and express		29,641 14
Total earnings south division		$973,995 99
And the expenses:		
Repairs of roadway	$133,176 23	
" machinery	69,406 21	
Conducting transportation	199,149 52	
		401,731 96
Leaving a net revenue of		$572,234 03
of which there has been paid for interest		300,217 62
Leaving a balance of		$272,016 41

The mileage of passenger trains on this division was 174,070; freight trains, 212,879; construction trains, 50,583—total 443,532: being an increase over the previous year of 111,482 miles. The earnings per mile of road were $4,041 34; and the expenses, $1,666 94—net earnings, $2,374 40. The earnings per mile run by trains, $2 19; expenses, 91 cts.—net earnings $1 28. Miles run to the cord of wood, 35; to one gallon of oil, 116. There were transported upon this division 179,764 bales of cotton, of which 27,119 bales were of the crop of 1859. Compared with the previous year, there was a decrease of 14,403 bales to the 1st of September, and an increase of 41,579 during the remainder of the year. The earnings from the transportation of cotton was $412,295 20—equal to 42½ per cent. of the whole earnings. The average distance transported was 192½ miles—which is equivalent to 34,575,895 bales transported one mile.

The total earnings of both divisions for the year were $1,120,588 51
And the expenses were 468,978 15

Leaving net earnings $651,610 36
Less paid for interest 354,457 62

Balance $297,152 74

—applicable to construction and equipment.

The net earnings of the Southern division, is 10 per cent. on its entire cost. And taking both divisions together, and estimating their entire cost, the net income is 9 per cent. on the whole amount.

The funded debt of the company is stated at $4,365,800. The floating debt at $873,749 11; but this includes $273,100 27 created in the purchase of rails and fastenings, which is to be provided for by the fund set apart for the completion of the road. This leaves of floating debt $600,648 84; for the settlement of which the directors have authorized the issue of 8 per cent. income bonds at 10 years' time, secured by a mortgage on the road, and its surplus earnings. By this means they hope soon to have the floating debt adjusted. The debt owing the State of Alabama has been so arranged, that instead of being paid by instalments, the entire amount falls due on the 1st of December, 1862—interest to be paid annually. Contracts made for the purchase of rails, etc., have been met promptly, and in some instances anticipated. Other liabilities have also been liquidated, and bonds which have been hypothecated returned. At the commencement of the year the company had on hand 1,713 of their sterling mortgage bonds, applicable to the completion of the road; since then they have received back from various sources 318—making 2,031 bonds; of which 874 have been disposed of, leaving 1,157 (representing $1,157,000), still on hand. During the year the company have received from the Governor of Tennessee $100,000 of State bonds, all of which, excepting $9,000 paid on contracts in Tennessee, are unsold, waiting for an advance in price. The company are entitled to a further issue of $415,000 Tennessee bonds as soon as the local work is completed.

It is proposed to put the lands of the company in market, allowing the purchasers to pay for them in sterling bonds at par. The president says:

We have over eleven hundred thousand acres of land yet to be sold. Our sales, up to the close of 1858, averaged *five dollars* per acre. During the past year, (1859,) they have averaged *six dollars and thirty five cents per acre.*

From this it will be seen that the proceeds of these lands, like the earnings of the road, will probably exceed the original estimates of their value. The policy here suggested of selling them, and receiving bonds in payment, will work an equal benefit to the company and the bondholders. It will increase the sales—will absorb our funded debt to the extent of these sales—and will reduce our interest account; while the bondholders will enjoy the benefit of the enhanced value of their bonds, incident to this new demand and its consequent reduction of the amount in circulation.

The "Paducah Branch" of our road is in healthy condition and pressing forward to an early completion. When finished, it will be sixty-five miles in length, running from the city of Paducah, in Kentucky, to an intersection with our main trunk line in Obion county, Tennessee. Thirty-two miles from Paducah, south, are completed, and the able and efficient President, Judge Campbell, informs us that the track will soon be laid to

the Tennessee line. This renders it important that this company should take immediate steps to put the thirteen miles, lying in Tennessee, in operation. The importance of this road, as a part of our great enterprise, can hardly be over-estimated.

The following is a statement of the Receipts and Expenditures from the organization of the company to 31st December, 1859.

RECEIPTS.

Capital Stock—		
Mobile instalments		$308,637
Mississippi "		1,219,566
Tennessee "		632,080
Kentucky "		111,257
City tax, 1850, '56		1,094,176
State of Mississippi subscription		100,000
Sundry subscriptions		16,075
		$3,481,791
Bonds and State Loans—		
City tax bonds	$400,000	
Tennessee tax bonds	674,861	
Alabama State Loan	389,410	
1st Income bonds, due 1861	771,715	
1st " " 1862	343,723

Requisitions	106,049	
Individual balances	9,017	
Local balances	120,450	
		858,467
Total		$12,447,373

EXPENDITURES.

Construction	$7,145,271
Engineer's department	378,487
Real estate	51,943
General expenses	277,766
Machinery	862,129
Mills for sawing	13,302
Right of way	17,174
Donated lands	15,803
Interest on bonds, loans, &c.	1,368,246
Paducah Branch, superstructure	114,894
Transportation	1,516,973
City tax bonds paid off	400,000
Alabama State loan	100,000
Materials for Whistler	16,835
Suspense account	3,093
City tax scrip	658
Bills receivable	39,821
Bills receivable (on hand)	1,247,373
Total	$12,447,373

The office of the company is at Mobile, Ala. The officers are:

President, MILTON BROWN.
Chief Eng. and *Supt.*, L. J. FLEMING.
Treasurer, A. F. IRWIN.

Bonded Debt of St. Louis.

The bonded debt of the city of St. Louis on the 9th May, 1859, as reported by the Comptroller, amounted to $5,321,296. Since that date to 1st March 1860, bonds to the amount of $141,896 have been retired at maturity, and of $171,000 have been bought up and canceled, making the total amount retired $312,896. In the same period there have been sold 46 bonds of $1,000 each, and 11 bonds of $500 each, amounting together to $51,000. Deducting the difference between the amounts retired and sold, the debt on the 1st March, 1860, was $5,059,900, being a diminution $261,396. The following statement classifies the several objects for which the debt has been incurred:

Classes of Debt.	Paid.	Added.	Total 1st Mar. '60.
Past indebtedness	$8,000	$....	$711,500
Railroad	113,000	....	1,677,000
General municipal	....	5,500	525,900
Water works	56,896	30,000	492,000
Real estate purchas's.	....	....	437,000
Public sewers	1,000	....	425,000
Old limits improved.	16,000	16,000	259,000
Harbor	10,000	....	249,000
Wharf	1,000	....	166,000
District sewers	107,000	....	117,500
	$312,896	$51,000	$5,059,900

From this debt the Fund Commissioner will retire about $300,000 addition before the close of the fiscal year, 9th May, 1860.

Indebtedness of Milwaukee.

The following is the present indebtedness of this city:

TO RAILROADS.	
Green Bay, Milwaukee and Chicago	$200,000
Milwaukee and Beloit	100,000
La Crosse and Milwaukee	200,000
Milwaukee and Watertown	200,000
Milwaukee and Fond du Lac	114,000
Milwaukee and Horicon	166,000
Milwaukee and Mississippi	534,000
Milwaukee and Superior	100,000
	$1,614,000
FOR MUNICIPAL PURPOSES:	
Funded debt bonds	$20,500
School house bonds	3,000
Fire loan bonds	11,850
Harbor bonds	104,000
Dredging bonds	13,000
Bridge bonds	30,000
Sinking fund	402,000
Redemption (for retiring past due bonds)	73,000
	727,350
Total	$2,341,350

—to which may be added the interest due on railroad bonds, $129,966: making an aggregate of $2,471,316 of bonded debt.

Sacramento Valley Railroad.

The annual meeting of the stockholders of this company was held at Sacramento, Cal., on the 14th ult. The following report of the Trustee was presented:

To GEO. F. BRAGG, Esq.,
President of the S. V. R. R. Co.

SIR—The annual meeting of the stockholders, being now held in the early part of the year, enables me to give you the full report of the Superintendent, to the last day of December, by which you will observe the gross earnings of the road, for the fifteen months, commencing 1st October, 1858; ending the 31st December, 1859.

Passenger traffic		$150,098 05
Merchandise do.		116,809 98
Mail		2,512 50
Rents		873 00
		$270,293 53
Current expenses	$110,849 53	
Contingent do.	15,656 51	
		126,506 04
		$143,787 49
Construction account for New Freight Depot, levee track, depot grounds, material on ship board, etc., etc.		24,516 91
Net earnings, over all expenditures, for 15 months		$119,270 58

The suit against the Company, for the alleged destruction of a field of grain, was decided against them, by the Supreme Court, and judgment in favor of claimant was paid, which, with some other damages, has swelled the contingent expense account.

The Construction account is probably larger than for some years to come, having extended the buildings at Folsom, paid for the depot grounds at Sacramento, at the foot of R street, and the land on which the track is located, from the levee to the main track. The latter has given great facilities to our business.

The cash account of the trust, from its commencement, to the 31st day of December, 1859, is as follows, viz:

Total amount of surplus earnings received from 21st May, 1858, to 31st December, 1859		$152,565 99
From which I have made the following payments, viz:		
Coupons Nos. 7, 8 and 9, 1st Mortgage Bonds, payable in New York, with exchange	$61,800 00	
Coupons 1, 2 and 3; 2d Mortgage Bonds payable in San Francisco	43,900 00	
	$105,700 00	
And have redeemed 39 2d Mortgage B'ds of $1,000 each for	33,116 81	
1859. December 31, balance on hand, in cash	$12,858.30	
Drafts uncollected	1,390.88	
	13,749 18	
		$152,565 99

—which with the accrued surplus earnings, has been applied to payment of coupons No. 4 of 2d Mortgage Bonds, $16,450 due 1st February, 1860.

Excepting a suit before the Supreme Court (for the destruction of a horse), the trust has no debt.

The Central Railroad Company have finished the grading to Lincoln, and the rails are now being laid out of Folsom. Every assurance is given, the whole 18½ miles will soon be opened to traffic.

The present position of the company is—

Capital stock of the company		$800,000
Less amount not issued		14,950
Capital stock		$785,950
First mortgage 10 per cent. bonds payable in 1875		400,000
Second mortgage redemption 10 per cent. bonds	$368,000	
Less redeemed	39,000	
		329,000
		$1,514,950
Showing a reduction since my last report, of capital stock	$5,150	
Second mortgage bonds	27,000	
		32,150

By the comparative statement of the business of the road for the past four years (as per table annexed), you will be gratified to observe the steady increase of the traffic, which belongs exclusively to our line of road, and which must be much increased by the several connections now proposed to be built.

This road—the pioneer road of California—has received no aid either from the Federal, State, County or City Governments; has been built entirely by individual enterprise and capital; and you have satisfactorily demonstrated what might be done, if the railroad system was fostered by the State and counties.

Since the commencement of this road, more than $1,400,000 have been disbursed for labor alone, in this county, adding so much to the circulating capital of the county. Besides this, the road has opened an entirely new business, giving employment to a large number of persons, and which could never have been undertaken without it.

Hoping each succeeding Report may be as favorable as the present, I have the honor to be, very respectfully, your most obedient servant.

J. Mora Moss, Trustee.

Sacramento, 14th February, 1860.

EXHIBIT OF THE RECEIPTS AND EXPENDITURES FOR THE FOLLOWING YEAR.

Years.	Earnings. Car.	Stage.	Freight.	Total Earnings.	Current Expenses.	Earnings over Current Expenses.	Construction Expenses.	Net.
1856	$93,951 11	$39,158 86	$40,234 14	$173,343 61	$92,336 23	$81,097 88	$23,164 15	$59,933 33

Journal of Insurance Law.

When an Agreement to Insure is Binding.

A rather interesting case has recently been decided in the Supreme Court of the State of New York, involving the rights and obligations of parties to the contract of Insurance. The facts out of which the controversy arose were peculiar. The plaintiff resided at Hale's Eddy, a town situated on the New York and Erie Railroad in the State of New York. The defendant's chief place of business was at Athens, in the State of Pennsylvania; and the defendant's agent resided at Hancock, N. Y. The agent of the company called at the house of the plaintiff on the 28th of March, 1857, and proposed to insure his house and furniture in the defendant's company. The proposition was accepted, a written application was made and signed by the plaintiff, and a receipt given, acknowledging the payment of the premium. The premium however was not actually paid at the time, but it was agreed that the plaintiff might send it to the agent at his convenience. The plaintiff was told that his contract of insurance was complete from the date of the receipt, and that his policy would soon be ready. The receipt was dated on the 28th March, 1857; the house was burned on the 7th of April following, and the furniture wholly or partially destroyed. The premium was sent to the agent immediately after the fire, and he accepted the money, not knowing of the fire. The company made out and sent a policy to the agent, but having heard of the destruction of the house, directed the agent not to deliver it to the plaintiff, but to refund the premium. The agent declined to deliver the policy, and tendered the premium to the plaintiff, which the plaintiff declined to receive.

The case we refer to is Whitaker *vs.* The Farmers' Union Insurance Co. Upon the facts we have narrated, the plaintiff brought his action to enforce the specific performance of the contract of insurance. The cause was tried in April, 1858, before Justice Campbell, who found the above facts; and also that the plaintiff had no knowledge of the specific powers, given to the agent by the defendant; that there was no fraud or concealment on the part of the plaintiff, and that he was entitled to a policy on his house and furniture, to take effect from the said 28th of March, at noon. The Judge also found as a matter of law, based on the above facts, that the plaintiff was entitled to a specific performance of the agreement to insure his property, as claimed in the complaint, and to recover the damages sustained by him.

From this decision of the Justice at Special Term, the defendant appealed to the General Term where the case was fully argued. The opinion of the General Term was as follows:

Balcom, J.—The plaintiff's application for insurance was dated the 28th day of March, 1857, and the agreement to insure was made on that day; but the $36 50 premium agreed to be paid for the policy, was not then paid, although the receipt taken by the plaintiff of the defendant's agent states that it was then paid. The receipt states that the policy was to take effect on the day above mentioned, at noon. The property that the defendant agreed to insure was a house and the furniture in it. The same burned in the night of the 7th of April, 1857. The plaintiff, by his agent Hotchkiss, paid the defendant's agent the premium for the insurance on the 8th of April, 1857, without disclosing the fact that the house and furniture had been burned; and the defendant's agent, in ignorance of that fact, then sent the plaintiff's application for insurance, and the $36 50 premium to the defendant, and the defendant immediately forwarded a policy in due form in accordance with the application to its agent, for the plaintiff. The policy insured the house and furniture from noon of the 28th of March, 1857. The defendant's agent learned of the burning of the house and furniture before he received the policy, and refused to deliver it to the plaintiff. He returned it to the defendant and tendered back the premium to the plaintiff, who refused to take it. I have no doubt but that the policy would have been delivered to the plaintiff, and been regarded by the defendant as binding from noon of March 28, 1857, if the house and furniture had not been burned on the night of the 7th of April. And had it been delivered, it would have been valid from the time it was made to take effect. The defendant should not be permitted to say the policy would have been good from the 28th of March, if no fire had occurred, but is void because there was a fire, on the 7th of April of that year, and be allowed to repudiate its agreement to insure. When the defendant accepted the premium, and forwarded the policy to its agent, the agreement to insure was complete and ratified as of the 28th of March, 1857, and the policy became the property of the plaintiff.

The Justice before whom the action was tried has found that there was no fraud or concealment on the part of the plaintiff; and I think the plaintiff was under no legal or moral obligation to inform the defendant or its agent of the fire, before or at the time the premium was paid; for the agent had received the application for the insurance and given the plaintiff credit for the premium, according to the finding of the Judge upon the evidence. The plaintiff was entitled to have his application for insurance acted upon by the defendant, after the fire, in precisely the same manner that it would have been if no fire had occurred.

One of the conditions of the policy issued by the defendant for the plaintiff was, that no insurance should be considered as binding, until the *actual payment of the premium*, and for this reason the defendant's counsel insists that the agreement to insure, made by the agent of the defendant, was invalid. Now granting that the defendant may have refused to fulfil the agreement on that ground, (as to which I will express no opinion,) it did not do so, but ratified it by accepting the premium and issuing the policy, which insured the house and furniture from the time the agreement was made. And, as has already been seen, the plaintiff was not bound to inform the defendant or its agent that his house and furniture had been burned; and that an agreement to insure from a time past is valid. It follows that the defendant was properly adjudged liable to specifically perform the agreement to insure by delivering the policy to the plaintiff, and to pay the damages the plaintiff sustained by reason of the fire. The defendant's motion for a new trial should therefore be denied.

New Orleans and Jackson Railroad.

The earnings of this road for the first five months of the commercial years of 1858-9 and 1859-60, commencing on the 1st of September, were:

	1858 and 1859.		1859 and 1860.	
	Pass'g'r.	Freight.	Pass'ger.	Freight.
September ..	$10,945	$32,518	$25,832	$41,068
October	10,137	71,285	29,329	71,861
November ..	22,502	74,406	28,662	112,170
December ..	33,802	74,852	57,890	102,366
January	39,096	56,407	50,914	62,655
	$115,582	309,468	192,659	390,120
		115,582		192,659
Mails		16,333		26,000
Total for five months.	$441,383			$608,779
				441,338
				$167,896

The increase for the last five months over the corresponding time last year is a fraction over 37 per cent.

Commerce of San Salvador, 1859.

The official statistics for the year ending 30th September, 1859, state the importations during the year at $1,306,378, being an increase over 1858 of $220,959, and the exports at $1,991,650, which exceeds those of the previous year by $994,908. This great increase in the exports is owing to the establishment of steam communication between Panama and the Central America States.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, March 31, 1860.

Michigan Southern Railroad.

The President of this road, Mr. GEORGE BLISS has just published a *card* touching his relations to this company in which he makes a very singular and contemptible exhibition of himself. His motive is simply a personal one—to glorify himself. His card is full of self-laudation, and of insinuations of the malfeasances of others, without any direct or tangible charges. This is all very different from his annual statement made a year since when he showed himself as secretive as he is now voluble. Everything was full of encouragement for the stock and bondholders. In a short time, portions of the road were forcibly taken possession of by the unpaid employees, and held till their claims were adjusted. The injury which this *coup d' etat* did to the company was immense; yet it was impending at the very time he made his report. If all of Mr. Bliss' insinuations are true, he is certainly very much wanting in manliness and in his duty to the company not to present them in shape of direct charges. As it is, he goes out of the company in a very sneakish manner, himself bearing a large portion of the odium resulting from the unfortunate condition of the company.

Men of a very different calibre, mentally and physically, and possessing a much higher degree of moral courage are wanted for the resurrection of our railroads.

Maine Railroad Reports.

It has been said by some one wiser than his fellows, that speech was given to man to enable him to conceal his thoughts. We are inclined to think also that railroad reports, at least so far as those of Maine are concerned, are concocted for the single purpose of concealing facts; for never in any State or country, in past times or in the present, have such abominable and unsatisfactory documents been palmed on a confiding public, or presented to a Legislature, as those to which we now call attention.

It is not our province to dictate as to what form such reports ought to assume, nor as to their contents. They ought, however, to fairly state the real standing of the corporations reporting. In Massachusetts, New Hampshire, Vermont, Connecticut, New York, Pennsylvania, Tennessee and Missouri, we have such as are commendable, if not complete. To these we refer the Legislature of Maine for examples—patterns we may say, from which all legislators may copy with advantage.

But the Maine reports, as at present published, are decidedly objectionable. Though ostensibly given in the best form—tabular—for comparison, there is no possibility of comparing a single series of facts contained in them. We find the funded debts mixed up with the floating; there is no statement of expenditures or net earnings; there are no separate statements of the cost of roads and their equipment, nor detail in anything, and where the columns ought to be full in the few specifications set forth, immense gaps occur, many companies not deigning to supply the information demanded by law. This want of uniformity and completeness is unexcusable, and ought to be remedied by compulsion.

Such are the reports sent by the astute Legislature of Maine to the world, as the reflex of the material and financial condition of the railroad companies of a State that boasts of having in its schools a larger ratio of its population than any other community in the world. If arithmetic is taught in these schools it is apparently taught to little purpose, as there appears but a very small modicum of that essential science in the productions of their quondam scholars; or it may be that they are loth to dispense too large a share of their acquisitions to their fellows; or that they are not over anxious to enlighten the blissful ignorance in relation to their own affairs which is at yet so prevalent. Possibly the latter category is the truth, and in that case we may give credit to the men of Maine both for arithmetic and cunning.

We even think that Captain Galton would meet with some slight complexity in these reports and ask for explanations.

But to be serious over a serious matter. Millions are now invested in American railroads, and but few families exist which are not more or less interested in their welfare. Is it not proper that they should have a "certain" knowledge as to the condition of their investments? And yet here we have year after year lame reports of just what is not wanted. These Maine reports indeed have become a scandal. They, moreover, provoke suspicion, and are not what men having an ordinary amount of self-respect would return. It therefore behooves both the railroad companies of the State of Maine and the legislators thereof to proceed at once to a thorough reform in this matter of reporting, and to give us annually a honest, fair and open response to the questions which railroad common sense propounds to the least intelligent of their class. Let their statements be so made that their constituents, the share and bondholders, who entrust them with their fortunes and welfare, shall not be left to the mercy of unprincipled and dishonest speculators, or despoiled of their property, through ignorance of its real value. Reports ought to be made with accuracy, and be as brief as the subject will permit of.

These remarks may, no doubt, be usefully applied elsewhere than to the hide on which they now fall. New Jersey is a case in point, and may profit by its inclusion in the same category with its sister State.

We will not, however, pursue the subject further. *Verbum sat*; and we hope that this, our protest against the present state of things, may be a sufficient hint to all concerned that the time has come for a thorough reform in this matter of reporting, and that the public, especially that class which trusts its money to incorporated companies, is thoroughly aroused as to the necessity of full periodic statements of the precise condition and status of their investments.

In another part of this week's issue of the JOURNAL we have inserted a table, compiled from the Maine report for 1859, exhibiting the only specifications in relation to the railroads of that State that are available. All the other matters reported on are chaotic, blundering and worthless. From this bald tabulation our readers may form

some slight opinion as to the necessity of the remarks we have thought proper to indulge in.

New Jersey Railroad Company.

Our attention has been called to an error in the table relating to the railroads of New Jersey published in our last week's issue. In that statement we gave the floating debt of the New Jersey Railroad Company at $500,218, whereas this amount is actual surplus earnings, placed to the credit of profit and loss in the account of the treasurer. This error arose from the statements published by the State authorities, which do not distinguish between the accounts of a treasurer *per se* and those of a company's as a corporate body.

Valuation of Property in Oregon.

The total valuation of taxable property in Oregon in 1859 was $24,184,809, against $22,824,118 in 1858. Taxes 1859, $48,368; 1858, $22,824. Taxes collected from Chinamen, $8,978, of which the State received about $1,349. This added to above, gives $49,717 as the total revenues of the State. The county of Multnomah shows the highest valuation, $2,754,590, and Tillamook the lowest, $29,774.

Railroad Business of Chicago, 1859.

The following list embraces all the trunk roads which centre in Chicago, with their several branches and extensions—

	Miles.
Chicago and Milwaukee	85
Kenosha and Rockford	48
Racine and Mississippi	86
La Crosse and Milwaukee	200
Chicago and North Western	138
Milwaukee and Mississippi	192
Galena and Chicago Union	121
Fox River Valley	34
Wisconsin Central	8
Beloit Branch	20
Beloit and Madison	17
Mineral Point	32
Dubuque and Pacific	70
Galena (Fulton) Air Line	136
Chicago, Iowa and Nebraska	81
Chicago, Burlington and Quincy	210
Burlington and Missouri	70
Quincy and Chicago	100
Hannibal and St. Joseph	207
Illinois River	33
Chicago and Rock Island	182
Mississippi and Missouri, 1st Division	61
" " " 2d "	40
" " " 3d "	13
Peoria and Bureau Valley	46
Peoria and Oquawka	143
Chicago, Alton and St. Louis	284
Illinois Central	704
Pittsburg, Ft. Wayne and Chicago	467
Michigan Southern and Northern Indiana	242
Monroe Branch	30
Detroit Branch	41
Cincinnati, Peru and Chicago	28
Michigan Central	282
New Albany and Salem	284
11 trunk and 20 branch and extension lines.	4,736

This table shows an increase of 167 miles of completed road during the past year. The increase is less than for several years past, but it is all the stringency of the times would warrant. The completion of the Iowa roads to the Missouri is the great work next to be accomplished, and it is sincerely to be hoped that very considerable progress will be made westward during the coming year.

The following table shows the earnings of all the railways tributary to Chicago for the year 1859.

	Passengers.	Freight.	Mail & Misc.	Total.
Chicago and Milwaukee	$131,810 35	$40,994 29	$10,295 77	$183,100 41
Milwaukee and Mississippi	210,973 05	512,318 25	23,207 49	746,498 78
Chicago and North Western	162,569 14	211,954 66	15,314 21	393,838 01
Galena and Chicago Union	396,067 86	915,149 54	53,792 26	1,364,009 66
Fox River Valley	8,385 28	13,827 85	2,104 27	24,307 35
Mineral Point	12,837 99	42,331 47	2,250 78	57,420 24
Dubuque and Pacific	24,688 48	30,688 98	2,390 00	57,767 46
Chicago, Iowa and Nebraska	31,599 88	75,699 59	5,473 97	112,773 44
Chicago, Burlington and Quincy	404,799 09	827,751 58	34,432 29	1,266,982 96
Burlington and Missouri	60,688 98	73,005 49	5,474 58	139,169 05
Quincy and Chicago	130,024 88	151,955 69	10,562 85	292,543 42
Hannibal and St. Joseph	385,254 43	296,117 68	34,003 50	715,381 61
Chicago and Rock Island	368,338 34	279,035 64	36,736 79	984,110 77
Mississippi and Missouri	69,529 13	98,259 76	5,485 04	173,323 93
Chicago, Alton and St. Louis			Estimated.	900,000 00
Illinois Central	817,411 90	1,107,019 10	188,750 92	2,107,381 92
Pittsburg, Fort Wayne and Chicago	794,921 80	964,336 18	205,863 25	1,965,121 18
Michigan Southern and Northern Indiana	718,634 06	895,438 70	124,079 54	1,738,149 30
Michigan Central	824,988 05	864,406 90	67,015 85	1,756,420 80
				$14,978,300 29

The earnings of the ten trunk roads for the past three years comparatively have been as follows:

	1856.	1857.
Chicago and Milw.	$650,000 00	$522,731 92
Chicago and N. W'n.	137,303 67	429,305 39
Gal. and Chic. Union	2,456,044 80	2,117,904 97
Chic., Burl. and Q.	1,627,029 61	1,899,586 49
Chicago and Rock I.	1,751,704 60	1,681,101 57
Chic., Alton & St. L.	1,000,000 00	998,309 48
Illinois Central	2,269,533 67	2,293,964 57
Pittsb., Ft.W. & Ch.	1,478,428 76	1,652,727 95
Mich. S. and N. Ind.	3,114,786 06	2,186,124 97
Michigan Central	3,128,154 10	2,656,471 36
Total	$17,812,957 27	$16,428,228 66

	1858.	1859.
Chicago and Milw.	$204,186 15	$183,100 41
Chicago and N. W'n.	390,319 68	393,838 01
Gal. and Chic. Union	1,547,561 23	1,364,009 67
Chic., Burl. and Q.	1,600,709 64	1,266,982 96
Chicago and Rock I.	981,789 00	984,110 77
Chic., Alton & St. L.	867,288 52	900,000 00
Illinois Central	1,976,578 52	2,107,381 95
Pittsb., Ft.W. & Ch.	1,567,780 18	1,965,121 18
Mich. S. and N. Ind.	2,039,346 97	1,738,149 30
Michigan Central	2,016,185 85	1,756,420 80
Total	$13,191,736 74	$12,659,115 01

This statement shows a falling off in receipts in these ten lines of $3,236,491 92 in 1858, and of $3,769,113 65 in 1859, from those of 1857, and the total decrease from 1856 was $5,153,841 26. In the last named year the aggregate earnings amounted to $17,812,957 37. The decrease from 1858 to 1859 was only $432,621 73; and hence it may be inferred that the business depression of the West has reached its lowest point. With fair crops during the coming season an advance in receipts may be confidently anticipated, and otherwise all the signs of the times seem to indicate an early return of reasonable prosperity.

Hudson River Cement Company.

We take great pleasure in directing the attention of our readers to the advertisement of this company, which will be found in its appropriate place in our advertising columns. By reference thereto it will be seen that they have for sale *Rosendale Hydraulic Cement, Calcined Plaster, Marble Dust* and *Land Plaster*. The weight and quality of each article is guaranteed. The works of this company are located at Jersey City, New Jersey, opposite this city, immediately upon the river, which enables them to ship directly from their own docks to the vessel, thus avoiding the necessity for re-handling. Every barrel is made expressly for the purpose—is well made—well papered—made of full size—and warranted to contain *three hundred pounds of cement*. These things are of consequence, and should be taken into consideration by purchasers. The nature of the article requires that it should be kept perfectly dry, until moistened for immediate use. Frequent handling of the barrels has a tendency to loosen the parts of which they are composed, and thus expose their contents to the action of the weather. The weight is also an item—and a large one, too, where an extensive order is given. Purchasers may rely upon being fairly dealt with at this establishment. It is only necessary to send the order *properly directed* to insure its immediate execution. Address HUDSON RIVER CEMENT COMPANY, or J. H. BUTTS, Secretary, Jersey City, N. J.

Taxable Property in Indiana, 1859.

The report of the State Auditor for 1859 shows a large increase in the valuation of the taxable property in this State in comparison with 1858. The aggregates for the two years are as follows:

Total valuation in 1859	$435,368,862
" " 1858	318,204,964
Increase 1859 over 1858	$117,163,898
Lands assessed for taxes	22,149,393 acres.
Average value of lands, etc.	$12.55 per acre.
Miles of railroad assessed	1,749,24 miles.
Valuation of railroads	$12,951,405

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 28th March, 1860, were as follows:

Cincinnati and Indianapolis Railroad.

The annual report of this company for the fiscal year ending December 31, 1859, has been published. From it we learn that the receipts on account of transportation during the year were:

From passengers	$161,754 45
" freights	235,645 05
" mail	11,100 00
" express	6,260 00
Total	$414,759 50
Total expenditures	213,304 79
	$201,454 71
To balance of interest acct.	$93,296 27
To balance of taxes	6,708 52
	100,004 79
	$101,449 92

EXTRAORDINARY REPAIRS.

Re-laying track	$6,911 50	
Re-building passenger cars	4,923 00	
Re-building freight cars	3,252 00	
		15,086 50
Balance credited to surplus acct.		$86,363 42

The following is a statement of the monthly receipts for 1859, from all sources:

	Passenger.	Freight.	Total.
January	$13,718 07	$15,221 33	$28,939 40
February	10,776 30	15,406 98	26,183 28
March	16,047 78	20,147 51	26,195 29
April	12,650 14	15,560 65	28,110 79
May	12,808 59	15,285 58	28,093 87
June	11,436 40	15,852 28	27,288 68
July	11,167 29	14,046 61	25,313 90
August	14,018 91	18,646 13	32,664 04
September	17,042 28	19,888 51	36,930 79
October	15,641 59	25,233 48	40,977 07
November	14,027 68	28,201 55	42,229 23
December	12,417 42	32,055 74	44,473 16
Total	$161,754 45	$235,645 05	$397,399 50
Mail			11,100 00
Express			6,260 00
Total			$414,759 50

The following is a comparative statement of the receipts from passengers and freight for the past five years:

	Passengers.	Freight.	Total.
1855	$210,258 33	$194,751 11	$405,009 44
1856	279,008 52	283,942 65	562,951 17
1857	232,080 50	294,370 29	476,400 70
1858	172,837 65	259,724 87	432,562 52
1859	161,754 45	235,645 05	397,399 50

The above table does not include receipts from mail and express.

The following statement will show the receipts and expenses of the road for the past four years:

	Receipts.	Expenses.	Net receipts.
1856	$579,950 57	$287,098 04	$292,861 58
1857	491,743 18	246,131 20	245,624 98
1858	448,885 00	218,023 79	230,861 21
1859	414,759 50	213,304 79	201,454 71

The following is a comparative statement of the number of way and through passengers carried over the road during the past five years:

	Way.	Through.	Total.
1855	79,598	48,288	127,886
1856	90,633	75,673	166,306
1857	86,255	57,203	143,458
1858	79,848	38,380	118,728
1859	76,479	34,718	111,197

The following is a comparative statement of the number of tons of local and through freight transported over the road during the past four years:

	Local.	Through.	Total.
1856	85,751	45,490	131,241
1857	68,188	36,638	104,826
1858	85,401	35,644	121,045
1859	79,227	35,044	114,271

The receipts from passenger traffic for the year show a falling off from the previous year of $10,382.05, of which $5,351.35 was from local, $5,030.70 from through travel. The decrease of receipts from passengers to and from foreign roads, was, however, but $818.78—a very gratifying result, as it shows that the loss was local. The local tonnage of the road for the year shows a decrease of 6,774 tons, and the through tonnage a decrease of but 600 tons. The President in his report says:

The earnings for the first ten months of the year were unsatisfactory, and greatly disappointed the confident expectations of its managers and friends. Many persons began to doubt the value of the property and the ability of the road to do much more than earn the interest upon its bonded debt, and maintain the present condition of its track and equipment. The estimated earnings of the road for the year were at least $500,000, but the actual earnings were but $414,759.50. Our estimate of the traffic of the road was based upon a mistaken idea of the amount of produce in the country, and the probable trade of the city of Cincinnati, and our mistake was the common error into which not only the managers of our connecting roads, north and west, but also the merchants and manufacturers of this city were led. There has not been a year since the opening of the road in which the surplus products of the country have been as light; nor one in which our merchants have had as unsatisfactory a trade with Indiana and Central Illinois. * * Early in the year nearly every flouring mill upon the line of the road, and the distilleries at its river terminus which are our largest consumers, were either closed or running to but a fraction of their capacity, and so continued until November. Another cause unfavorably affecting the receipts of the road, has been the low rates of freight between the Atlantic cities and all points at the West. * *

The expenditures of the company during the year on account of construction and for renewals, have been large—heavier than was anticipated or promised at the date of my last report. The necessity for many of them was not then apparent, and the expediency of others not foreseen. In this respect, as in the earnings of the road, there has been disappointment. * * * *

Eleven high truss bridges, varying in length from 100 to 334 feet, have been rebuilt at a cost of $35,469.69, and four low truss bridges at a cost of $5,500. Only one important bridge remains to be rebuilt the present year. Nearly all of the old bridges rested upon wooden abutments, and in constructing the new ones heavy masonry has been substituted. The amount expended upon masonry for bridges and culverts exceeds $25,000. The outlay has been heavy, but the work is permanent, and the safety of the trains guaranteed.

A new track to the stone quarries has been constructed during the year at an expense of $10,000. There has also been expended during the year about $7,000 for side-track at Indianapolis and way stations, the principal outlay being for iron. A large water station has been constructed at Shelbyville, and five wood sheds along the line, at an aggregate cost of $4,389.50. Depots have been built at Prescott and Waldron, and a commodious depot and eating house at Morris. Also, a house for the shelter of all passenger cars at Indianapolis. Nearly all the depots and sheds were built under contract, requiring the contractors, in lieu of cash, to take the bonds of 1858 at 80 cents on the dollar.

The sum of $3,777.59 has been expended for an independent telegraph wire and apparatus between Cincinnati and Indianapolis.

The equipment of the road has been increased by the purchase of 10 box cars at an average cost of $550. The material for a large number of platform cars, and additional stationary machinery for the shops at Indianapolis, have also been purchased.

The number of 10 per cent. bonds paid and canceled during the year was $30,100, and the number of 7 per cent. bonds retired from the proceeds of real estate and bills receivable was $14,000—making a total of $44,100.

The number of real estate 10 per cent. bonds due in Dec., 1858, was exchanged for the 7 per cent. "bonds of 1858," was $178,500, and $3,000 more are to be exchanged immediately. The bonds of 1858 have been taken in exchange at the rate of 85 per cent., the difference of 15 per cent., amounting to $26,775, have been paid in cash. A portion of this amount was paid late in December, 1858. This item, together with the discount on all the bonds sold during the year, has been charged to our surplus account.

The real estate not required by the company for right of way, depot grounds, &c., together with bills receivable from lands heretofore sold, has gone into a trust fund for the redemption of the "bonds of 1858," which were taken by the holders of the R. E. 10 per cent. bonds, maturing in December, 1858. This fund amounts to $215,906.37, and will doubtless retire the whole number of bonds taken in exchange within the next five years.

The floating debt of the company is about the same as at the date of my last report. This is owing to the heavy expenditures to which reference has already been made. Had the earnings of the road been equal to our expectation, this debt would not have exceeded $60,000 at the close of the year.

An effort was made a year ago by the sale of bonds, to reduce the debt of the company to a small balance, and for this purpose about $150,000 of the bonds of 1858 were agreed to be taken at 80 cents on the dollar. From this subscription about $100,000 in cash has already been realized, and a large proportion of the balance will doubtless be settled by a subscriber who is a creditor of the company.

The President estimates that the disbursements on account of construction for the year in masonry and bridges, containing the fencing of the road, in depots and freight houses, and in the employment of a construction train for four months in distributing ballast, will amount to $25,000, a large portion of which will be payable in the bonds of the company.

During the year nearly 40,000 new ties have been put into the track, and it is estimated that 18,000 more will be required in 1860.

The following, from the Treasurer's report,

shows the liabilities and assets of the company at the close of the year:

LIABILITIES.

Delaware, Lackawanna and Western R. R.

At a meeting of the Directors of this company, held in this city on the 24th inst., the interest dividend for the past three years which was made some time since, was directed to be paid in stock at par. The following preamble and resolution was adopted unanimously:

Whereas, By a resolution adopted by the stockholders of the Delaware, Lackawanna and Western Railroad Company at their annual meeting held on the 26th day of January, 1858, the President and Managers were prohibited from increasing the capital stock of said company for any purpose other than the fulfilment of their existing contracts without the assent of three-fourths of the stockholders being first had and obtained. And

Whereas, The interest which the said company are by law authorized to pay upon its stock has not been paid for the last three years, the means for the payment thereof having been expended in the construction of the road, and in purchasing equipments therefor, and in liquidating liabilities for those purposes incurred. Now, therefore,

Resolved, That the President and Board of Managers of this company be and are hereby authorized to issue new stock at par, to such an amount as shall be sufficient to pay the interest from the first day of January, 1857, to the first day of January, 1860, at the rate of 6 per cent. per annum upon the whole amount of capital stock heretofore issued, and to pay the same on and after the 15th of May to the holders of the said stock as it appears that they were thereto respectively entitled on the 29th day of February, 1860, that being the time the transfer books were closed in accordance with a resolution of the Board of Managers; provided, however, that all sums of interest less than a full share of stock, to cost $50, shall be settled in full by the payment of 75 per cent. thereof in cash.

Cincinnati and Dayton Short Line Railroad.

The following gentlemen were elected, on the 19th inst., Directors for the ensuing year:

W. M. Bateman, B. E. Dale, Charles Rule, Arnd Kattenhorn, Wm. Sellew, Samuel Beresford, John G. Jones, Wm. Loder, Samuel H. Goodin, Miles Greenwood, S. D. Grafiin, David Linton, James Goodin.

St. Louis, Alton and Chicago Railroad.

Col. R. B. Mason, the efficient Superintendent and Chief Engineer of this road, is pushing ahead and getting it in good running order. He intends to make it one of the best in the State of Illinois, and is using means to this end. The Receivers have contracted for six first class locomotives of Messrs. Richard Norris & Son's make, to be put on the road early in April. They are designed for high speed, and it is intended to perform the trip with only one change of engines between Chicago and St. Louis, in about twelve hours. The present schedule time is sixteen hours. Already about 120,000 new ties have been delivered along the route, which, with the 400 tons of iron delivered in part, and the rest deliverable in a short time, will suffice to give us a first class straight road to St. Louis before the summer travel sets in. A large force is now at work repairing the track.—*Western R. R. Gazette.*

Increase	$370,550 92

Petersburg Railroad.

The fiscal year of this company closed with December. We have the report of the directors, giving in detail the operations of the road during the year, and the condition of the company's affairs at its close. The improvements which were made within the year, and the condition of the road at the date of the report are also noted. The business of the company during the year was prosperous in all its branches. The following comparative table exhibits the receipts from freights and passengers during the past five years —the receipts of 1855 embracing those of the Greenville Company:

	Freight.	Passengers.
1855	$149,534 07	$106,176 56
1856	140,296 76	129,597 44
1857	135,267 16	128,259 32
1858	164,956 02	118,602 44
1859	175,169 37	129,606 68

—by which it will be seen that the receipts from both freight and travel exceeded those of any former year.

The following table shows the quantity of each of several leading articles of inward freight during the last five years, made up from January 1st to December 31st of each year:

	Bales of Cotton.	Hhds. of Tobacco.	Bushels of Grain.	Barrels of Flour.	Boxes of Tobacco.
1855	14,812	11,846	307,534	4,057	12,371
1856	11,834	11,593	260,210	6,436	931
1857	10,632	10,300	242,447	3,892	361
1858	26,339	12,391	299,528	5,680	749
1859	23,377	14,359	299,088	3,443	4,502

The progressive improvement of the country in population and production, the opening of new lines of communication, the advance of Petersburg and Richmond in trade and population, and the improved navigation of the Appomattox river, justify the anticipation that this branch of business will be fully maintained in future years, notwithstanding any competition that is likely to arise; the operation of causes of this character having heretofore more than counterbalanced the effect of rival improvements in diverting business in other directions.

As was anticipated, the opening of the great line of travel via Lynchburg, Chattanooga, etc., had the effect of diverting from the Atlantic line, of which this road forms a part, a considerable portion of the Southern and Western travel. This diversion, however, was not so great in point of numbers as was anticipated; and the first of the foregoing tables shows that notwithstanding the reduction of numbers, there has been no falling off in the revenue of the company from travel. It is also reasonable to suppose that a still further falling off will be occasioned by the opening of the Lynchburg extension of the Orange and Alexandria, and the Mississippi Central Railroads. But these losses will be in a great measure retrieved by the influence of other improvements which are in progress, and especially of the Florida Railroad, which will soon be completed, and the lines of steamers on the Gulf with which it will connect.

The line has been remarkably exempt from serious accidents. During the entire period since the road commenced operations, now more than 25 years, not a single passenger has been killed or seriously injured upon it.

It has been the policy of the company to improve the track from year to year by relaying the worst portions of it with new iron. About 4½ miles of the main track were relaid in 1859, making 11½ miles relaid during the past four years. The report says:

The Petersburg Railroad was opened to Blakely on the north bank of the Roanoke in the summer of 1834. Since that time, besides the extinguishment of a large debt for construction and equipment, and the payment of expenses, the road has been extended, at a heavy expense, to Weldon, on the other side of the Roanoke; the entire main track has been twice relaid, once with heavy flat rail, and once with heavy U rail; the Gaston branch of 18 miles has been relaid with T rail, and entirely reconstructed; more than one-sixth of the main track has been relaid for the third time; depots, warehouses, shops, &c., have been built, and dividends to the amount of nearly one million of dollars have been paid in money. All this has been done out of the clear profits of the company, with the exception of about $100,000, represented by the bonds now outstanding. More than half of this amount could now be paid off by the reserved fund in hand, if the holders of the bonds would consent to receive it. Thus this road has not only contributed immensely to the business and prosperity of Petersburg, but has vindicated the wisdom of its projectors as a successful and profitable enterprise.

The earnings of the road during the last and previous fiscal year were as follows, viz:

	1858.	1859.
From Freight	$164,956 02	$175,169 37
" Passengers	118,602 44	129,606 68
" Mails, exp's, etc	27,430 30	24,259 03
	$310,988 76	$329,035 08

The expenses for 1859 are thus stated:

Running account	$60,964 88	
Depot "	25,578 76	
Maintenance of way	33,105 90	
General management	10,835 28	
Loss and damage	1,296 12	
Stores	5,078 63	
Construction	401 00	
	$137,260 56	
Add amounts outstanding.	31,596 44	
	$168,767 00	
Less increased value of company's property	36,598 55	
		132,164 58
Leaving as actual profit		$196,870 50

—or nearly 20 per cent. upon the whole capital and indebtedness.

The above increased value of the company's property is due to the permanent improvements which have been made, the cost of which is included in the maintenance of way, depot and other accounts.

No addition was made to the number of locomotives in 1859, but a new one will be required the coming year. The additions to cars over and above those rendered unfit for service are: one first-class passenger car, two baggage cars, and four box freight cars. The present equipment of the road consists of: 14 locomotives; 9 first-class and 5 second-class passenger cars, 5 baggage and mail cars, 83 box and 33 flat freight cars, 14 dump, pole and crank cars.

The receipts into the treasury from all sources during the year, (including $53,718 75 from previous year) were $547,588 78; and the disbursements, $507,085 19—leaving a balance of $40,503 59.

The following statement shows that the debt of the company on the 1st of January last, exclusive of hiring bonds, etc., consisted of 7 per cent. coupon bonds, amounting to $112,500, and the balance of the 6 per cent. bonds issued for dividends in July, 1854, amounting to $4,976. A part of the last amount has since been paid, and the whole of it would have been if the parties had been willing to receive it. One of the $500, 7 per cent. bonds, has also been redeemed.

The liabilities of the company are as follows:

Capital stock, 8,832 shares *a* $100	$883,200
7 per cent. coupon bonds, due '63–'72	102,500
Scrip dividends of 1854, due July 1, '64.	4,976
Unpaid dividends	831
Balances due connecting roads	8,187
Charges on transporta'n, sundry accts	13,892
Hiring bonds unpaid Jan. 1, 1860	17,614
Excess of assets over liabilities	389,090
Total liabilities	$1,420,291

And the assets as follows:

Railroad and appurtenances	$1,024,300
14 locomotives	88,800
19 passenger and baggage cars	82,000
83 box freight cars	50,850
33 flat " "	18,485
Other cars, etc	6,759
Machinery, tools and materials in carpenter's shop	6,322
Stationery, machinery and tools	7,692
Materials in metal	10,986
Stores	2,479
Wood, lumber, cross ties and bricks	7,981
Office furniture and fixtures	3,200
Due on earnings account	6,668
Old balances	6,278
Bills receivable	67,042
Savings' Banks	20,000
Due from P. O. Department	19,675
Cash in banks	40,504
Total assets	$1,420,291

The office of this company is at Petersburg, Va. The officers are:

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. B. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 43 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

SALISBURY IRON CAR WHEELS,
WROUGHT IRON BOLTS, NUTS AND WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, President, Seymour, Conn.
WM. H. MARSHALL, Treasurer, No. 5 Gold st., N.Y.

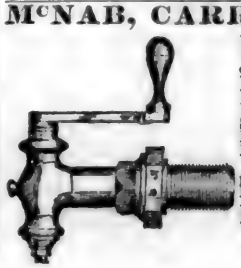
STEEL CAR SPRINGS,

MANUFACTURED

BY THE

PATENTEE,

CARLOS FRENCH,



SEYMOUR, CONN.

THESE **SPRINGS** are now in use on many of the **leading Railroads** East, South and West.

Samples can be examined and Price Lists obtained at

No. 5 Gold st., NEW YORK.

McNAB, CARR & HARLIN,

MANUFACTURERS of Steam Engine Builders' and Plumbers' **BRASS WORK**, such as Globe Valves, Safety Valves, Pump Valves, Whistles, Oil Cups, Steam and Water Gauges, Bibbs, Stops, Basin Cocks, Hose Pipes and Couplings, etc.

All parties interested will please send for Catalogue and Price List. Address

McNAB, CARR & HARLIN,

16 John st., NEW YORK.

PHILIP S. JUSTICE,

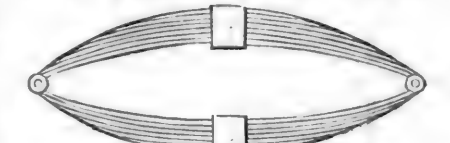
21 North Fifth St., Phila. 54 Cliff St., New York.

152 Congress Street, Boston.

English Railway Springs,

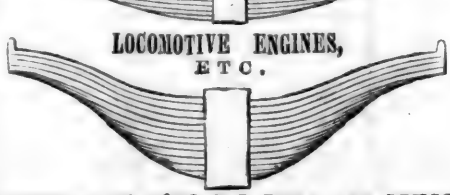
MANUFACTURED OF

Best Double Faggotted and Improved Cast-Steel.



EACH SPRING TESTED.

FOR FREIGHT



AND PASSENGER CARS,

LOCOMOTIVE ENGINES,

ETC.

EXTRA CAST STEEL FOR TOOLS AND DRILLS, "CONCENTRIC" SOFT CORE TAP STEEL, (warranted not to crack in hardening,) best double Faggotted and Cast SPRING STEEL, ribbed and plain; Machinists' Files, "Crescent" Faggotted Axles, Wrought Locomotive and Passenger CAR WHEELS, Homogeneous Metal, etc. Manufactured by

CHARLES CAMMELL & CO.,

"Cyclops" Steel Works, Sheffield.

THE CHALLENGE CUSHION! SUPERIOR TO ALL OTHERS

WINANT'S

EXCELSIOR BILLIARD CUSHION

PATENTED

AUG. 10TH 1858.

71 GOLD ST. N.Y.

FOR CORRECTNESS, DURABILITY, AND ELASTICITY.

Victoria Bridge.

(Continued from p. 263.)

Mr. Brunel in further discussing the subject of *Wooden Ice Breakers*, as used in America, to which I have before referred, says: "But in taking these as precedents, the question arises what has been the degree of success?" And then he asks, "Have we the means of judging, whether, if 50 of these were exposed to the action of the St. Lawrence, one or two would not be carried away every ten years; and what would be the result of *such* an average in the present case, where there are 24 piers?" And he solves the problem by the answer "that the probability would be that *one* or *two* bridge piers at the *least* would be carried away, or interrupted, on the average *two* or *three* times every 20 years." That is to say—if one pier out of 50 is carried away in five years, three would be carried away, out of 24, in ten years! This is new rule of proportion in "*probabilities*" which I confess I do not understand; but it seems to me quite evident that it was the rule applied generally in determining the dimensions and character of the various parts of the Victoria Bridge. On the other hand, he says that "the *same average* would give a probability of a hundred years duration in a single ice breaker." Now it seems to me that if out of 25 piers one is carried away every ten years, the "probability" in the case of a single pier is, that it would be carried away once in 250 years. This calculation of "probabilities," however, is out of place, even if correct, for the grand object is not to run *any risk whatever*. But in arriving at safety, it by no means follows that we should incur an excessive cost, and the question is not merely how to avoid risk, but how to avoid it at the lowest cost. It requires no skill to avoid risk *regardless* of cost. And if the only condition to be fulfilled is this, there would be no necessity for engineers. Anybody can accomplish it.

A great proportion of American bridge piers are constructed on foundations of *crib work*, filled with stone, where any serious depth of water is encountered; and such expedients have been uniformly successful. Mr. Liddell mentions an instance, with which I am familiar, of the bridge across the Richelieu River at Chambly, about 15 miles from Montreal. The river is about 1,000 feet wide, the current very strong, and the ice heavy. The piers of this bridge are of ashler face, with rubble filling, and are laid on a foundation of wooden cribs; yet they have withstood the action of ice for 20 years. The bridge on the Grand Trunk Railway, across the same river at St. Hilaire, built in 1847, by Mr. A. C. Morton, is about the same length, with similar piers, built on crib work of timber. These piers have not failed, although subjected to severe floods and heavy ice, and within the past three years the Grand Trunk Company have erected an *iron tube* on them. As Mr. Liddell says: "There is no appreciable risk run in adopting what has been uniformally successful." I believe, however, neither Mr. Stephenson nor Mr. Ross in their reports condemned Mr. Keefer's plan of cribs on account of any "probability" of their failing. The former, as before stated, merely argued that they would cost more than the ashler *cutwaters*, while the latter says: "You will also perceive that these *quarter acre islands* would occupy 25 per cent. of the water breadth of the river, one of the most prominent reasons for their abandonment *when first considered*." Now Mr. Keefer's plan contemplated 22 openings of 240 feet clear between the cribs, and one of 340, making a total clear width of water way of 5,620 feet at summer level. At the same level, the Victoria bridge has 24 openings of about 238 feet each, and one of about 324 feet, making a total of 6,036 feet. Then 416 feet, or less than seven per cent., difference in water way, which could have been more than supplied by the substitution of two more spans, at a far less cost per foot than Mr. Stephenson's embanked approaches was; therefore it seems the prominent reason why these cribs were abandoned.

Mr. Liddell says in relation to this: "Now considering that since the contract was made, a reduction in water way has been made to the extent of 1,332 feet, or three times the difference between the water way proposed by Mr. Keefer and that now adopted; this allusion to the *proportion* occupied by *these quarter acre islands*, does not bear examination."

Besides this, it seems not to have occurred to Mr. Ross that in the adoption of tubes, or other plans of superstructure, having no arches running down on the sides of the piers, narrower cribs might be used; and that a reduction of their width from 60 to 40 feet each, which would be perfectly admissible, would have more than supplied the 7 per cent. deficiency of water way.

The discussion upon the philosophy of "probabilities," between Mr. Liddell and Mr. Brunel, is interesting, and I may be pardoned for giving other portions of it.

Mr. Brunel says: "Engineering difficulties are very generally regarded as mere questions of expense; and assuming that a difficulty is to be overcome, and that judicious means are devised for the purpose, the execution or application of these means, may, generally speaking, be treated as a question of cost, *merely*; and if the required cost is incurred, the difficulty is assumed to be overcome, but this is not strictly true in practice. Very few of the great difficulties in engineering, resulting from natural causes, can be overcome, or the result rendered *positively certain*. * * * Success is at best but a question of *degree*, and what is called certainty, a mere question of probabilities. * * * While this is a strong argument against incurring excessive cost, it is also necessary to bear it in mind when considering plans *which have been found hitherto to succeed*."

It is necessary, he says, to ascertain "the *de-*

gree of that success," and the value "of the risk running" in these examples. Mr. Liddell in reply to this somewhat abstruse philosophy, remarks:

"With all due deference, I venture to examine the reasoning in these paragraphs as Mr. Brunel applies the principles they contain to determine the plan and dimensions of the piers of the Victoria bridge. * * So that Mr. Brunel deems it a mere calculation of 'probabilities' as to when the Eddystone Bell Rock and Skeddyvore Light houses are to be carried away—when the Thames Tunnel is to burst up—when the railway over Chat Moss is to sink—when the Menai Suspension bridge is to be destroyed—when the Britannia bridge—the Suspension bridge at Pesth—the Acqueduct at Roquefavour, and other triumphs of engineering skill are to be swept away. This is a view of these works which few will share. Mr. Brunel considers risk a strong argument against *incurring excessive cost* in the execution of a work. The assumption is that the difficulty is to be *judiciously overcome*, which precludes the idea of *excessive cost*, so that the argument is *ad captandem*."

Mr. Brunel says—"It is necessary to consider the amount of risk it is wise or profitable to run in the particular case under consideration." To which Mr. Liddell replies that "it would be unwise and unprofitable to run *any risk whatever*;" and he considers Mr. Brunel's views "as at once destitute of practical meaning and most derogatory to the science of engineering. The question really turns on what are the most judicious means of providing against risks."

But to leave the metaphysics of engineering, and return to more practical matters, and to the question whether such an expenditure as was incurred in these foundations was a "judicious means of providing against risks."

Other methods besides wooden cribs suggest themselves, and particularly that of *concrete* laid in *caissons*, a plan extensively adopted for foundations of the most important structures under similar circumstances. This method was suggested by Mr. Liddell as quite applicable to the Victoria bridge piers, but was strenuously opposed by Messrs. Stephenson and Ross, as well as Mr. Brunel. Mr. Liddell says: "The chief point for consideration seems, in fact, to be how to construct this part (the under water portion) in the shortest possible time. For the best manner of accomplishing this object, I advise that the piers up to the ordinary level of water should be formed of rough stone concrete, with cement laid in an iron casing; the upper portion of the piers to be built upon this in the ordinary way. * * My estimate for the 24 piers and two abutments, built in the manner recommended, with ice breakers for each, and for the embankments at each end of the bridge, amounts to £220,000. I have in this estimate adopted prices of work far above the English."

The difference in cost between the two plans is to be obtained by a comparison up to summer level.

As before stated, Mr. Ross's estimate as the cost of the foundations before laying the first stone, was 55 per cent. of the total cost of the piers, *i. e.*, £440,000—leaving the sum of £360,000 as the cost of the masonry, an average of £6 per cubic yard. There can be no great difference in the cost of laying masonry above or below summer level, the foundations first being prepared.

If, therefore, we assume one-third the masonry to be below water, we have £120,000 to be added to the cost of foundations, £440,000, making £560,000 as the cost of the piers below summer level. But if we take the price of two shillings and six pence per foot, which Mr. Ross says is "left for the masonry," and apply this to 40,000 yards, we have the sum of £135,000 only to deduct from the total of £800,000, leaving the cost below summer level, £645,000.

Mr. Brunel in discussing the question of these foundations says in regard to the plan adopted by Mr. Stephenson: "I am convinced that it would, practically, be the least costly in the first construction. * * The form and size of a simple ashler pier can be determined with some degree of certainty, so as to insure what may be *termed safety*. But the form, size, etc., of any combination of piles and stones, or iron plates and concrete, are none of them susceptible of being determined by any calculation from *precedent*. * * Any opinion, therefore, would be little better than *guess-work*." I feel convinced, he says, "that the result would be a much more costly work than a simple ashler pier."

Mr. Brunel, however, gives no figures or calculations, and therefore all the above is merely his *dictum*, having weight just so far as it will stand the ordeal of facts and figures.

To these assertions, Mr. Liddell opposes the following: "Suppose a caisson of wrought iron, fitted *in situ*, and then filled with *beton*, in the usual manner of doing such work. I will take the outer casing at 3,000 superficial feet, to make full allowances for the construction I propose, and the cubic contents at 12,000 cubic yards. The iron made on the average one inch thick, at £36 per ton, would cost £1,944, say £2,000. The *beton* made of the best cement and limestone of the district, would cost about £2 per yard *in situ*, or £2,400. The total cost would not therefore exceed £4,400."

This calculation being made for the deepest piers, and the average depth being only about two-thirds of the pier estimated for, he says: "The average cost of such foundations, for the piers, at the same rates, would therefore be £3,000; and this multiplied by the number of piers (24) is but £72,000. If it is said it is not strong enough, double the thickness of iron; sheath the cutwater in four inch forged bars; tie it all down with Lowmoor iron rods, three inches thick, let four feet into the rock at every 10 feet all around, and when you have multiplied all appliances to a needless superfluity of strength, you shall still not have reached *one fifth* the contract price of the foundations of these piers. I give this illustration to show how little an opinion put forward in the manner of Mr. Brunel's ought to be regarded."

Mr. Liddell proceeds to speak of the reliance to be placed on the use of concrete as demonstrated by the practice of engineers and architects in England, France and Germany, and broadly asserts that "a man who can deny the efficiency of concrete, must either be ignorant on the subject, or must wilfully shut his eyes to the facts. * * * There is *nothing more certain* than that such a construction as I have suggested would stand as well as the foundations recommended by others; *nothing more certain* than that they would stand *better*. Their specific gravity would be greater; their strength would be greater; their form to break the ice could be made the best possible, and the material exposed is harder and less destructible by abrasion than stone. Wrought iron in such position, of the least thickness proposed, would last for a century; and then, nature would have come in to assist the engineer, by rendering the concrete as hard and unchangeable as the rock on which it was founded."

Mr. Brunel mentions a case where concrete by being badly proportioned and mixed had failed, as an argument against its use. But as this simply proves that *poor* concrete should not be used, and as no engineer would think of recommending any but the *best* for such purposes, the case has no bearing. It is sufficient to say that its use is co-extensive with the construction of submarine works for a century past, and its service proves how groundless are Mr. Brunel's objections on this score. *Good* concrete like a solid ledge can only be broken by blasting. That a skilful use of concrete in iron caissons, in this instance, would have reduced the cost of these foundations £100,000, admits of no more doubt than the fact of its successful endurance of the most severe tests in numberless instances.

Upon the question of a "judicious means" of carrying the required load across the openings between the piers of the Victoria Bridge we might apply some of Mr. Brunel's philosophy, and if we bear in mind, that "success is but a question of degree;" and that "while this is a strong argument against incurring excessive cost, we must in adopting any particular plan, ascertain the degree of *success* which has attended its use," we might be excused for not adopting the tube, a plan of which there are but few examples, and those so recent that it would be premature to adopt conclusions, the object of which is to arrive at the nice point in the scale of probabilities to which this reasoning would bring us. For of all the plans of superstructure which could be suggested for performing the required service, less could be known by *precedent* of the tube, than any other. That the tubular system *may* fulfill certain conditions which no other plan can meet, and that in the case of the Britannia bridge it may have been precisely what the circumstances called for, is no sort of argument in favor of its applicability to positions where no such conditions exist. The structure which may be perfectly appropriate in one case, may be entirely inappropriate in another; and to say, as Mr. Stephenson says in his report, that the tube originated in meeting conditions that no other plan could meet, has nothing to do with the question as to the most "judicious" plan for spanning openings of 242 feet, each, in the Victoria Bridge. This is not a very long span. It was no new engineering task to be performed. It was not one involving any "degree of risk," for it had been accomplished repeatedly, and the "degree of success" was not a *fraction*, but a unit. It had not only been accomplished with open iron trusses but in wood. Its perfectly feasible and perfectly safe accomplishment by several well known plans had been demonstrated practically, in many instances, and hence there was no risk whatever in applying the same plans to the openings of this bridge. It was simply a question of first cost and maintenance; for if the sufficiency in strength be admitted, the questions of cost and maintenance

are the only elements involved in determining what would be a "judicious expenditure."

It was not by any means necessary that the superstructure should be measured by the magnitude of the piers that sustained it, or the abutments which connected it with the approaches.

The ice phenomena were not elements in the calculation at all, but the span of 242 feet of the Victoria bridge had no greater duty to perform than if it had been constructed over the most limpid brook in a climate of perpetual summer. The fact of its spanning a portion of a great river in which the most terrific phenomena occur, involved no greater necessity of extraordinary and special features than if it spanned the shallowest and most quiet puddle, or an equal space of dry land at an elevation of a foot above the surface. Yet the superstructure of this bridge involving the fulfillment of no unusual conditions cost more per lineal foot than any other beam of the same span designed for similar purposes, in the world.

(To be continued.)

City Railroads in St. Louis.

St. Louis has entered upon the experiment of City Passenger Railroads, and has already four separate lines in operation. We glean the following financial statements of the several companies from late reports to the Common Council.

The "*St. Louis Railroad Company*," opened the completed portion of their road in September, 1859. The cost to the 1st of March, 1860, was as follows:

Construction of roadway	$212,837
Cost of equipment	73,769
" real estate	12,000
Total cost	$298,604

The total earnings of the road from the 1st September, 1859, to 1st March, 1860, six months, were | $53,619
And the expenditures | 48,120
Applicable to taxes, dividends, interest, etc. | $5,499

The "*Citizens' Railway Company*" state the cost incurred on account of their road to the 31st December, 1859, as follows:

Real estate	$13,311
Rolling stock	19,518
Running stock	19,212
Stable construction	3,084
Road construction	62,312
Total cost	$117,437

This road was opened for traffic on the 15th August, 1859. From this date to 31st Dec., the total receipts amounted to | $33,043
And the expenditures to | 26,873
Leaving for taxes, dividends, etc | $6,150

The receipts for January were $4,089, and for February, $4,091—making a total of $41,223. The running expenses for January were $5,698, and for February $1,728—making a total of 37,319. Earnings less expenses for first six months of running, $3,903.

The "*People's Railway Company*" commenced running in September, 1859, and to the 25th February, 1860, earned in gross $23,071, and disbursed on account of operations $21,864—leaving for dividends, etc., $1,207 as the result of nearly six months operations wherewith to pay interest, taxes and dividends. The cost of the road of this company at the date above referred to was as follows:

Cost of roadway	$45 214
" equipment, harness, etc	1,839
" cars	15,011
" horses	11,139
" buildings, shops, stables, etc	5,650
" omnibus and wagons, etc	2,680
Expenses of agencies, etc	2,251
Total	$83,875

The "*Missouri Railroad Company*" states its condition on the 1st January as follows:

Receipts.		*Expenditures.*	
Stock paid in	$66,770	Construction & equipment	$76 674
Earnings	27,639	Operat'g exp.	21,518
Debts due	3,783		
Total	$98,192	Total	$98,192

The above shows a surplus of earnings over operating expenses for the period of six months from the 2nd July, 1859, on which day the cars commenced running, of $6,121—a sum applicable to interest, dividends, depreciation, etc.

These exhibits are certainly not favorable. The income is inadequate, Probably, however, the next year may add up stronger figures, and the results prove remunerative to the stockholders. At any rate these enterprises must pay indirectly in the increased value of distant properties and the greater facilities they will afford to city locomotion.

New Orleans, Jackson and Great Northern Railroad.

We learn that a contract for the completion of that portion of this road lying between Aberdeen and the Mobile and Ohio Railroad has been closed with Messrs. Barker, McAllister & Brother, to be completed within 18 months. That portion of the road, also, extending 26 miles north from Cocke, Bradford & Co.'s contract has been let to Wesson, Hazlehurst & Co. The 26 miles taken by Messrs. Cocke, Bradford & Co. are nearly finished, and will be ready for the iron by the 1st of April. Other portions of the road between this point and Canton are being contracted for, and the prospects are, that the entire road will soon be in course of construction.

Northern Central Railroad.

The Annual Report of this company for 1859, embraces the statements of the President, General Superintendent, Master of Machinery and Supervisor. Taken together these several reports set forth a most extraordinary condition of matters relating to the company's affairs.

The President is brief in his statements, but to the point. He says that "when the present board assumed the direction of affairs they found a large portion of the road between Baltimore and Bridgeport in a dilapidated and unsafe condition, and the financial affairs of the company equally deplorable." The engagements of the company, however, were met by an unexpected increase ($114,155) in the revenue which enabled the company to expend beyond the ordinary disbursements, considerable amounts in renewals and in the purchase of additional rolling stock. Much, still remained to be effected to place the road in a safe condition for travel.

To the General Superintendent the task of a detailed exposition is left. After a cursory review of the past, this officer boldly states what was the condition of the road on his accession to office. "The condition of the Northern Central road," he says, "then appears to have been this: that the portion below Bridgeport had been worn out, and that between Bridgeport and Sunbury had never been finished. Moreover there was a great want of rolling stock, there being neither a sufficient number of passenger cars, freight cars nor locomotives, and many of those that were upon the road were greatly out of repair." In another part of his report he states that the wonder is not "that the trains sometimes got off the track, but that they ever made a trip without doing so."

These denouncements do not belong to that portion of the road between Bridgeport and Sunbury which is new, and as the Superintendent declares well constructed, but as yet deficient in many respects.

During the past year, however, every effort at improvement has been made, large sums have been expended in making the road safe, and a comparative perfection has been attained.

Notwithstanding the condition of the road, however, no serious accident occurred to any of the 354,919 passengers who passed over it. This result is due to the strict supervision of the present officers and the good conduct of their subordinates. Very few accidents of any kind occurred above Bridgeport. Those occurring below that station "were owing," says the superintendent, "principally to the bad condition of the road, causing the engines and cars to leave the track or in some manner to give way."

The business of the road as reported for the year has been unexpectedly large. The amount of freight carried was 959,758,685 pounds, being an increase of 197,001,032 pounds over that of the previous year. The total carried on all the roads operated by the company (including the Wrightsville, York and Gettysburg, and the Sunbury and Erie roads) was 1,114,314,900 pounds. In the above amount of freight is included 222,531 tons of coal, being an increase of 57,378 tons over the quantity transported in 1858. Of this amount 86,637 tons were manifested at Sunbury, 80,810 tons at Trevorton, 41,935 tons at Millersburg, 7,977 tons at Dauphin and 5,172 tons at Wrightsville. About 100,000 tons were carried through to the city of Baltimore.

The number of passengers carried on the main line was 254,160, on the Wrightsville line 26,647, and on the Sunbury line 74,112—total 354,919, being an increase of 71,273 over the year previous.

The total revenue was $929,528, and the total expenses $588,941:—net receipts, $340,993. From the expenses, however, ought to be deducted $34,253 expended for construction and $104,557 for extraordinary repairs, which would leave a net revenue of $479,396.

During the year the Canton Division has been finished, and also the telegraph from Sunbury to Baltimore. The cost of the latter was $10,812.

The rolling stock has been increased during the year by the purchase of four locomotives, sixty-five house freight cars, ninety-five gondola cars and two passenger cars; and five old locomotives and 22 lime cars have been sold. The rolling stock now on hand consists of 41 locomotives and cars as follows—*eight-wheel:* 265 house freight, 146 gondola, 8 stock, 8 baggage and 31 passenger; *six-wheel:* 4 house freight, 61 lumber, 13 wood, 9 stone; *four-wheel:* 57 house freight, 156 lumber, 140 lime, 18 wood, 2 powder, 785 coal, 10 dumping and 32 ore.

The Treasurer's accounts giving a statement of the company's operations for the year and its financial condition on the 1st January, 1860, are as follows:

Revenue Account for 1859.

Receipts:—		
Passenger earnings		$252,096
Freight "		646,768
Mail "		29,363
Miscellaneous receipts		1,301
		$929,528
Less earnings of W. Y. & G. R. R. from 1st October to 31st December		6,199
Total earnings N. C. R. R. Co.		$923,329
Disbursements:—		
Transportation expenses		$272,781
Repairs of machinery		136,425
" road		159,033
General expenses		20,773
		$589,012
Less expenses charged W. Y. & G. R. R. Co. 1st Oct. to 31st Dec., 1859, as per contract		6,676
Working expenses, 63.06 per cent.		$582,336
Net revenue		340,993
Total		$923,329

Profit and Loss Account for 1859.

Interest on loans		$278,238
Dividend of $1.25 per share on 6,341 sh. W. Y. & G. stock		7,926
Sinking fund appropriation for year ending 30 Sept., 1859	$7,926	
Interest on S. F. investment	2,280	
Int. on uninvested appropriation.	18	
		10,224
Int. 6 per cent. on $62,000 W. Y. & G. bonds	$3,720	
Int. 6 per cent. on $31,513 W. Y. & G. debt	1,418	
		5,138
Accidents 6th March and 4th July, 1854,		3,073
Old claim		7
Interest account	$5,400	
Exchange	427	
		5,827
Balance unappropriated		41,914
Total		$352,947
Balance from revenue account		$340,993
Interest on $62,000 W. Y. & G. R. R. Co.'s bonds to 30th Sept. 1859		3,720
Int. on $31,513 W. Y. & G. R. R. Co.'s debt, to 30th Sept., 1859		1,418
Due on 3,173 shares W. Y. & G. R. R. Co.'s stock, to 30th Sept., 1859		3,966
Interest accrued on Sinking Fund for Loan No. 7, $2,500,000		2,850
Total		$352,947
Balances at credit 31st December 1859:		
Balance as above		$41,914
Balance 31st December, 1858		370,250
Total now at credit		$412,164

The earnings of the Northern Central Railroad and the roads operated by the company in 1858 and 1859 have been comparatively as follows:—

	1858.	1859.
Northern Central	$770,479	$864,494
Wr., York and Gettysburg	27,946	26,700
Westminster Branch	27	.....
Sunbury and Erie	12,151	37,033
Miscellaneous	4,769	1,301
Total	$815,373	$929 528
		815,373
Increase in 1859 over 1858		$114,155

Board of Directors and Officers, 1860.

President—John S. Gittings.

Directors on the part of the City—Chas. George Ridgely and A. Fuller Crane.

Directors on the part of the Stockholders—James Frazier, Peter Mowell, William T. Walters, Adam Denmead, John Merryman, Aaron Hoffman, Simon Cameron, Amos E. Kapp, William Colder, J., Alexander Small, Jacob S. Haldeman, William Cameron.

Secretary—Robert S. Hollins.

Treasurer—John S. Leib.

Chief Engin'r and Gen. Sup't—A. B. Warford.

Steam Engineering in 1859.

(Continued from p. 236.)

In the preceding paper, the attention of the engineering reader was directed to the prevalent defects in the conveyance of steam through the pipes and cylinders; and it must be confessed that among practical men the most lamentable ignorance exists, and for the simple reason, that the evils referred to are not immediately evident. The cylinder and the steam therein make up their own accounts, and very few take the trouble to investigate the balance.

A fall of three or four inches in the vacuum is sufficient to alarm the most indifferent engineer, but a loss of 30 per cent. by condensation is not worth consideration.

Does the use of superheated steam economize the fuel? The answer to this question must be in the affirmative; facts are stubborn things, and we have just now ample proof that the economy arising from superheating steam is a fact.

Then, whence does this great economy of 20 and 30 per cent. arise? Is there some new and mysterious property given to the steam in the process of superheating? or can the improvement resulting be accounted for in an ordinary and common-sense way? We believe it can.

The result arising from the use of the superheated steam reflect severely and most justly on the positive ignorance of steam engineers. How is it that there is sufficient *waste* heat from the boiler furnace in the present boilers, to supply the additional heat to the steam? We excuse an answer, as there are so many other considerations intermixed with the question. One thing is quite certain, that if the exact *cause* of the economy is not understood, steamship owners, at least, appreciate the *result*.

As far as can be judged from the best information and the most reliable experiments on the effects of supplying steam with heat in addition to that acquired in its generation, there is reason to believe that the practical effect of such addition, is simply to prevent the condensation in pipes and cylinders before referred to.

There are two facts connected with superheated steam that deserve especial attention.

The first is that steam, having a temperature due to its pressure, may, whilst in contact with the water, have an additional temperature of say 100° given it, so that the steam in contact with the superheated flue may be 350°, whilst the steam and water below it are only 250°.

The second fact is that superheating steam appears to have little or no effect on its pressure; thus we have seen steam of 250° superheated to 360°, with little or no difference in the pressure—indicating that superheating isolated steam does not, *per se*, give much increased power. The question that engineers have to decide is whether the fuel is best consumed in superheating, or generating steam.

Strictly speaking, we have no right to say so much on this subject, as it is at the present time quite an exceptional one; but we hail it as an omen of better times, and a great blessing to steam engineers, tending to make them more reflective.

Steam jackets or casings around the cylinders of steam engines are also recommended to counteract the premature condensation of the working steam. With few exceptions their adoption has given increased duty for a given consumption of fuel; and, in fact, if there is a loss of 20 or 30 per cent. by premature condensation—a fact we believe fully proved—it is quite certain that a casing about the cylinder, must of necessity prevent this loss. The question then remains as to the cost of supplying these casings; and here we undoubtedly require more definite and reliable information. Steam casings being the exception, and not the rule, experimenters have been few and far between; and unless special arrangements are made, it is difficult to estimate the relative values of the power lost by condensation in the casing, and the power gained by preventing condensation in the cylinder.

The amount of steam condensed in the casings is stated variously from 3 to 12½ per cent. of the total steam generated; in no case has it been found to exceed 12½; indeed, the average may be taken at much below that amount.

If, therefore, as has been proved beyond a doubt, the condensation in the cylinder amounts often to 30, and that in the jacket we will say to 10 per cent., the result is a saving of 20 per cent.

Again, in the cylinder the per centage of condensation increases so rapidly with the increase of expansion, that the economy due to the increased expansion is almost neutralized; hence it is that we have never derived, and never can derive, from expansion in non-heated cylinders, the results that may be always obtained when the normal temperature of the working steam is maintained.

In steam-casings the condensation is practically uniform at all rates of expansion, and is almost uniform in point of time. Not so the working steam; it makes all the difference whether 3 lbs. or 6 lbs. weight of steam is used per stroke; in the first case (in general terms) the condensation is 30, and in the second only 15 per cent.

With those who deny that steam-casings are economical, the reason almost universally given for that denial is, that it does not matter whether the condensation takes place in the casing or in the cylinder, as the *amount* is the same in both cases. This is only a rough and ready way of burking a subject not understood.

If practice indicates opinion, steam-jackets have little to hope for from the present race of engineers. Nevertheless there are a few who at least will fairly set the question at rest by experiment before they form a decided judgment thereon.

Where money is plentiful it is freely spent, and the same may be said of fuel,—with this difference—that, in the former case, a man does get something which he considers the value of his money, whilst with fuel we spend a shilling and obtain two pence as returned value.

It is quite unnecessary, even in 1859, to take any trouble to prove that 1 lb. of steam expanded in the cylinder will give out a greater power than 1 lb. not expanded; and that the power obtainable from 1 lb. of steam increases in a certain ratio with the expansion.

This remark brings us to the second point of our present subject—the *use* we make of steam in a steam engine.

It must be admitted that the expansive property of steam has been generally appreciated, and of all improvements tending to economy, has had the most supporters; and yet even this most important branch of steam engineering is neglected by the bulk of those who supply and use steam power. Is it not a fact that, on land and sea, an efficient expansion valve gear is the exception, and not the rule?

Pumping, water-works, and some other large land engines, are often fitted with arrangements for expanding to any extent; but take the thousands of small engines from 6 to 60-horse power, and, as a general rule, they have no expansion gear.

In marine engines the neglect on this point is perfectly unaccountable, and most discreditable. When an attempt is made to expand, how is it done? Why, generally, either by the link-motion, which is quite useless for large cylinders, if an expansion of four times is required; or by the cam and throttle, the latter often placed some distance from the main slide, with all the disadvantages of such an arrangement.

The introduction of the link-motion is one of the few solid improvements of the present day; for, although it can only be considered as a step in the right direction, it has been invaluable as a mechanical arrangement, and has been *one* of, if not *the* chief cause of so much more attention to the economy of expanded steam. The marine engineer must regard the link, as a reversing gear, almost with positive affection; so handy, so certain, and, at the same time, such a fair apology, as the times go, for an expansion gear.

But the link will not enable us to expand the steam six, seven, eight, and nine times.

Before the introduction of double-ported valves in marine engines, perhaps no cut-off could be more effectual than the additional slab slide on the back of the main slide, and worked by a separate eccentric, arranged with a segment to alter the expansion at pleasure; and this plan is increasingly adopted in land engines as simple and effective. We only mention it as a plan perhaps more generally approved than any other.

With the prospect of increased pressure and increased economy, a simple and effective expansion is a great desideratum. It is quite beyond the purpose of these remarks to do more than point out the want.

The naked truth is, that the mass of steam engines are *not* fitted with expansion gear, and the owners of such are spending a shilling where six pence would more than suffice; the old story.

The link motion is better adapted for locomotives than any other description of steam engine, but yet it does not fulfil the conditions necessary for the most profitable expansion of 150 lbs. steam.

Notwithstanding the convincing arguments of those who uphold that low pressure is more economical than high pressure steam, it is to be feared the tendency of the age is to go up the pressure scale as rapidly as vessels can be invented adapted for such increased pressure; and we have a conviction not easily removed that this tendency is a progressive one. A few years ago, 10 lbs. per square inch was a high pressure for marine boilers; now 20 lbs. is the usual pressure in new contracts, whilst 25 and 30 lbs. are not uncommon; either, therefore, the low pressure advocates must be in error, perhaps through not having clearly ascertained the value of some x y in their calculations, or—sad alternative—our progress is retrogressive.

As far as our judgment and experience can be relied on, we hold the opinion that the full economy obtainable from steam as a motive power can only be realized by employing the highest pressure of steam compatible with safety; and we also believe this opinion is held so strongly by our first engineers, that it will be exemplified in their practice to such an extent as improvements in the generators will permit.

The very method of designing engines prohibits much benefit from expansion. The diameter and length of cylinder is *first* decided on, and then a boiler is designed to fill that cylinder at least half full per half stroke; and, as the boilers weaken by age, the pressure and expansion are reduced together, so that a disgraceful beginning has a miserable end.

This defect in designing is very frequent with marine engines, for, in consequence of salt incrustation, a reduction of the pressure is more certain, and occurs earlier, than in land engines.

The generator should be the starting point of design; there should be no difficulty with a thoughtful and observant engineer in ascertaining what quantity of steam can be supplied, of a given pressure, with a fixed rate of combustion, and a fixed ratio between it and the heating surface. Having fixed his ratio of supply, he can, with the most undeviating certainty, decide on his revolutions, rate of expansion, capacity of cylinder, and actual power required. But no; this, the most easy, most rational process, is considered the most difficult, and your practical man tells you that to get a certain speed out of a ship, "if you have a 50-inch cylinder, you will do it." Do it? yes, as many an unfortunate ship-owner has been "done."

Before leaving this part of the subject, it may be as well to allude to the advantages alleged to be derived from the combination of a high and low pressure cylinder; and it must be admitted that such engines have been more economical than ordinary single cylinder engines. But why is this so? Is it in consequence of the two-cylinder arrangement? This has never been proved. The reason we believe to be simply this—that all double cylinders are necessarily, by their very construction, *expansion* engines; whereas the cases are rare in which the single cylinder is fitted to carry out the expansion to an equal extent. With an equal amount of expansion, the single cylinder should be the most economical; at the same time, the double cylinder arrangement, although more complicated, has the most even motioned during high expansion.

We have purposely avoided any theorizing as to the realized increased duty from various rates of expansion, as such information can be obtained from many sources. By a proper use of the expansive property of steam alone, we can effect a certain saving of at least one-half of the present cost of steam power.

Our next and last subject is connected with the disposal of the steam.

In locomotives and non-condensing engines the waste occasioned by the escaping steam will be in inverse proportion to the rate of expansion, and the abstraction of heat to raise the temperature of the feed-water. With reference to the latter, a saving of from 10 to 15 per cent. may always be obtained by passing the exhaust through or over the feed-water; but even this simple arrangement is often neglected—indeed, it is so in the majority of cases.

In condensing engines it is of great importance to reduce to a minimum the units of heat passed into the condenser; and here again we recognize the importance of extreme expansion and no premature condensation. Any defect that allows 2 lbs. of steam to do only the work of 1 lb. is not only a first loss in itself, but ultimately it injures the efficiency of the condenser by admitting into it nearly the total heat contained in 2 lbs. of steam, instead of only that contained in 1 lb. Hence, it is a proved fact, that with superheated steam or steam jackets, much less water is required to condense a horse-power of steam.

In speaking of steam generation, we called attention to the apparent necessity of the loss arising from the escape of the heated gases requisite for a draft; and now, in concluding our remarks on the disposal of the steam, we have to confess that the discharge of a large mass of heated water appears an unavoidable loss; we take only some 4 per cent. of it to feed the boiler, and the remaining 96 per cent. is wasted. The temperature of the feed-water thus supplied, averaging 100°, *may* always be raised to 200° or more, by abstracting the heat from the brine, discharge, or scum, but it *is not*.

With steam of 20 lbs., a vacuum of 10 or 12 lbs. is an important addition, but it is questionable whether the addition of 10 lbs. to a pressure of 150 will repay the cost of fitting and working the air pumps; all will depend upon the extent of expansion.

And now a word about surface condensation, and the advantages to be derived from its introduction into steamships.

It would be difficult to overrate those advantages. A saving of at least 20 per cent. of fuel—clean pumps—small air-pumps—regularity of feed—and, above all, the consequent introduction of high pressure steam.

It is matter of surprise and regret that such authorities as Mr. J. Scott Russell and Mr. Bourne should inform the young engineer that surface condensation is not sufficiently rapid. This is a bug-bear that has haunted many, and tended to repress an improvement that *will not* be repressed. It is not for us to say how or when surface condensation will be generally introduced; we can only put, on the one side, the many advantages its introduction creates, and, on the other, the trifling mechanical difficulties to be overcome, to effect its adoption. And who will question the result?

Next month we shall allude to the mechanism of the steam engine; and, in the following number, concludes the series with a *resume* of the whole points touched upon.

(To be continued.)

Ogdensburg Railroad Bonds.

The time of payment of coupons on the Ogdensburg 1st mortgage bonds has been changed from April and Oct. to Jan. and July, and the bonds are to be extended for 10 years from 1st July, 1859.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, April 7, 1860.

Michigan Southern Railroad.

A statement just issued by the Michigan Southern Railroad Company, shows the condition of the road on the 1st of March.

The capital stock (common, 61,146 shares; guaranteed, 28,936 shar.) represent'g.		$9,018,200 00
The bonded debt		9,531,000 00
The floating debt (includ. pay-rolls)		1,086,793 60
Total		$19,635,993 60
The floating debt in Nov., 1857, was.		$2,415,527 00
The floating debt in March, 1859, was		1,244,774 00
This debt, proper, March 1, 1860, was	$685,588 51	
(Of which $408,204 is secured.)		
Add pay rolls and vouchers for last two mos., and conting'cies, less cash in agent's hands.	140,169 38	
Making	$825,867 89	
Add coup. unpaid Feb. 29, 1860	261,025 71	
Total, March 1, 1860		1,086,793 60
The receipts of the year from all sources were		$1,834,421 00
Operating expenses, including taxes	$1,105,234 59	
Treasurer's office and Eastern expenses	20,693 36	
		1,125,927 95
Net surplus		$708,493 14
The interest account for the year is		748,556 76
Deficiency		$40,063 62
Add the year's appropriations due sinking fund		32,935 00
Total deficiency		$72,998 62
The past year the earnings have been reduced		$185,603 87
Expenses were reduced		116,356 56
Net decrease		$68,646 51

Accompanying this statement is a circular, signed by Mr. Bliss, President of the road, warning the stockholders against "certain outside parties, professing to be dissatisfied with the course of the directors, and who have combined to change the direction by installing themselves and their friends with control of the road. One object avowed by these parties is to *raze* the stock and bonds to a reduced aggregate." To all this, the New York *Times* well replies that the effect of the new movement has been to advance the market value of the share capital and bonds of the road from *five* to *seven* millions of dollars, showing the public estimate of the value of the proposed change, compared with the past policy of the company. The greater part of the advance is undoubtedly due to a hope that the proposed change will inaugurate a more successful policy.

Albany Vermont Railroad.

This road, which extends from Albany to Eagle Bridge, 31½ miles long, was purchased on the 4th inst. by several parties, chiefly residents of Troy, who will forthwith organize a new company. The price was $307,000; original cost, $2,600,000.

An Invention to Save the Oil Used in Lubricating Car Axles.

The immense amount of oil used in lubricating the rolling stock of railroads, makes it an object of no small importance to save it, and it affords a tempting field in which to test the skill of the inventor. The journal box, which is the subject of this article, may not be successful, it has yet to stand the test of thorough trial; but, nevertheless, it may serve to awaken thought and attract attention in other quarters, which will ultimately be of service.

The invention consists of a box in which the shaft is intended to rest; but instead of resting upon a smooth stationary iron surface, the shaft rests upon a number of rollers which entirely encircle it, and as the shaft moves, chase each other around it. The principle is that of moving a heavy body upon a plane by placing it upon rollers instead of attempting to slide it. Between the larger rollers, upon which the weight of the shaft rests, there are intermediate and smaller rollers, which perform the office of keeping the rollers in their proper position. As the axle revolves, all the rollers travel with it in a given direction, and as all roll, and in no case slide, it is maintained that there is no friction, and no oil is necessary for lubrication. The lateral or end thrust of the car axle is received upon three globes, placed in a cup fitted for that purpose, between the "box cap" and the end of the axle. In turning curves the lateral pressure is thus greatly reduced. We understand that this box is being placed upon some of our city railroads for trial.

Illinois Central Railroad.

We published a week or two since a brief synopsis of the report of the directors of this road to the stockholders, for the year 1859. We have now detailed reports of the heads of the several departments with full statements and tabulated results of the operations of the year. These are accompanied also by the reports of the trustees under the mortgages. These various documents are too voluminous for our columns, but we condense from them such portions as are of general interest, and to such an extent as may be necessary to an understanding of the general condition and prospects of this road.

The General Statement is as follows:

		Dr.
Permanent expenditures		$24,166,782 19
Interest account	$5,293,170 29	
Less avails of interest fund	564,966 81	4,728,203 48
Working stock and supplies		429,954 40
Trustees free land bonds defaced		550,000 00
Loss on issue of 970,000 debenture bonds due July 1st, 1861		145,262 50
		$30,020,202 57
		Cr.
Share capital paid		$11,117,090 00
Construction bonds		15,387,902 06
Free land bonds		2,079,876 61
Optional right bonds		61,000 00
Debentures due July 1st, 1861		683,970 00
Net floating liabilities		675,601 00
Trustees Peoria and Oquawka Railroad bonds		20,000 00
Free land interest fund		44,761 96
		$30,020,202 57

Of the 255,000 shares authorized, 175,000 have been issued. There had been paid on these shares up to Jan. 1st, 1860, as follows:

On	22,333 shares,	$100 per share.	$2,233,300
	3,171 "	70 "	221,970
	149,101 "	60 "	8,946,060
	391 "	40 "	15,640
	4 "	30 "	120
	175,000 shares.	Total.	$11,417,090
Amount carried to interest fund in '51.			300,000
Net balance as shown in general balance above			$11,117,090

Construction bond account stands as follows:

$12,885,000 7 per cent., and $4,115,000 6 per cent., redeemable 1875.	$17,000,000 00
Loss on issue	1,612,097 94
Net amount as shown in the general statement	$15,387,902 06

Of these bonds there had been canceled by proceeds of construction lands and delivered to the trustees up to Jan. 1st, 1859 $927,000
Amount canceled during 1859 391,500

Total canceled to Jan. 1st, 1860	$1,318,500
Balance	15,682,500

Free land bond account stands as follows:

Total issue bearing 7 per cent. but redeemable 1860	$3,000,000 00
Deduct loss on issue	920,123 39
Net amount as shown in general balance	$2,079,876 61

Of these there have been canceled by proceeds of free lands up to Jan. 1st, 1859 $123,000
And during the year to 1st Jan. 1860 59,000
And by payments on full paid stock 550,000

Total	$732,000
Balance	2,268,000

The optional right bonds stand as follows:

Total issue		$2,518,000
Amount canceled	$2,515,000	
Amount rec'd on full paid st'k.	5,000	
		2,520,000
Balance outstanding as shown in the general statement		$61,000
7 per cent. debentures due July 1st 1861, total issue		$970,000
Amount received on full paid stock and $10 instalment		336,030
Amount outstanding as shown in general balance		$633,970

Floating liabilities are stated as follows:

Bills payable in London	$720,000 00
Bills and accounts payable in N. Y.	459,067 80
Do. at Chicago office	431,011 97
	$1,610,079 77

Offsetts by the following assets:

Cash and available assets	$283,699 42
Miscellaneous assets	284,569 98
Bills and accts. receivable at Chicago.	366,208 43
Total offsets	$934,477 83
Net amount of floating liabilities as shown in the general balance	$675,601 94
Permanent expenditures to 1st January, 1859, were	$23,726,240 81
Do. for year 1859	440,541 38
Total to 1st Jan'y, 1860	$24,166,782 19
as shown in General balance sheet.	
Interest account to 1st Jan'y, 1859.	$3,886,733 24
Amount for the year	1,406,437 05
Total 1st Jan'y, 1860	$5,293,170 29
Reduced by net earnings and sales of Interest Fund Lands as shown below	564,966 81
Balance as shown in Gen'l Statem't.	$4,728,203 48

The working stock on hand consists of the following:

Fuel	$133,269 76
Merchandise	24,603 62
Engineering materials	80,139 02
Materials at shops	190,158 73
Stationery	1,783 27
	$429,954 40

The receipts from operation for the year 1859 were:

From Passengers	$811,411 90
" Freight	1,107,019 10
" Extra baggage	2,746 00
" Mails	75,867 49
" Express	22,217 30
" Rents	5,344 85
" Rent of property	65,558 15
" " engines and cars.	16,880 01
" Storage and dockage	336 30
" Freight over Peoria & Oquawka R. R.	7,067 06
Total receipts	$2,114,448 98

Operating expenses:—

General expenses	$74,456 80	
Maintenance of way	437,392 85	
Station expenses	216,627 95	
Maint'nce of machinery.	274,124 25	
Damages	22,905 95	
Train attendance & supplies	141,565 91	
Fuel, oil and waste	235,019 93	
Salaries	66,777 56	
Sundry items	20,708 82	
		1,489,579 52
Net earnings for year 1859		$624,869 46
Deduct charter tax		132,104 46
Net amount carried to interest fund		$492,765 00
Add sales of interest fund lands.		72,201 81
Total carried to interest fund as above,		$564,966 81

LAND DEPARTMENT.

The whole grant was for 2,595,000 acres, appropriated as below:

To secure the payment of—	
$17,000,000 construction bonds	2,000,000 acres.
Interest on do.	250,000 "
$3,000,000 free land bonds	345,000 "
	2,595,000 "

Sales have been made as follows:

Constr'n l'ds, 1859.	21,718.49	acres for	$243,755 73
Free " "	5,020.06	" "	70,177 54
Interest " "	1,324.89	" "	22,927 80
Total, 1859.	28,063.44	" "	$336,861 07
Add advance interest and interest on notes, and town lot sales			78,168 82
Sales to Jan'y 1, 1859, less cancelations in 1859			15,320,807 13
Total sales to 1st Jan'y, 1860			$15,735,837 02
Add purchased lots and lands sold,			53,423 28
			$15,789,260 30

Lands remaining 1st January, 1860:—

Construction lands	1,118,620.75 acres.
Free "	150,777.09 "
Interest "	88,841.61 "
Unsold—total	1,357,739.45 "
Sold "	1,237,260.55 "
Total	2,595,000.00 "

Average receipts per acre for all lands sold, $12.60.

The report of the company is full and explicit upon all matters of interest to the stockholders; everything is given that can help them to a full understanding of the value of the enterprise. So far it is calculated to give entire satisfaction.

There are some features connected with the history of the road encouraging for the future. Its earnings have fluctuated less than any road entering Chicago, while for the present they will exceed largely that of any previous year. In the annexed statement they are given for a period of five years in comparison with several other Chicago roads.

Year.	Illinois Central.	Galena & Chicago.	Chicago & Rock Isl'd.
1855	1,532,118	2,315,786	1,242,906
1856	2,357,203	2,416,343	1,416,304
1857	2,293,965	2,315,787	1,886,196
1858	1,976,578	1,506,710	1,407,841
1859	2,114,448	1,369,144	889,300

	Michigan Southern.	Michigan Central.	Chicago, Burlington & Quincy.
1855	2,595,681	2,215,283	
1856	2,714,848	2,800,442	1 233,024
1857	2,233,745	3,161,887	1,640,428
1858	2,015,749	2,417,915	1,505.166
1859	1,824,431	1,838,129	1,044,573

The earnings of other Chicago roads for the last year, on the average, were about one-half the highest point they reached in 1856 and 1857. Those of the Illinois Central were only 10 per cent. less than for 1856 the highest point reached by that road. Its earnings for the current year will probably exceed those for 1856 by $450,000. The gain for three months of the current year has been $169,096, as follows:

	1859.	1860.	Gain.
January	$132,024	$187,416	$55,392
February	133,183	186,189	53,006
March	152,182	212,880	60,698
	$417,389	$586,485	$169,096

The gain for the three months has been at the rate of 41 per cent. A similar gain for the year will give $2,980,000 as the gross earnings. This point may not be reached. The per centage of increase, however, should be maintained, as a continuous route by railroad is just opened between Chicago and New Orleans, which must add very largely to the earnings of the Illinois Central over last year. This connection was only formed in February last, and has not been appreciably felt in the earnings for the first quarter of the year.

The early recovery in the earnings of the Central shows the rapid development of the country on its route. It is now working into a large *North* and *South* traffic. Its line, with its complement to New Orleans, traverses nearly all the extremes of climate favorable to production, and coincides with the natural routes of commerce. This fact is undoubtedly one of the causes why its traffic has held out so well, while that of most of the Western roads has suffered so severely.

Revenue of Canada.

The public accounts of the Province have been published. They show an increase in the ordinary revenue, and a decrease in the ordinary expenditure, of 1859, as compared with 1858. The figures are:

	1858.	1859.
Expenditure	$8,939,809	$7,806,804
Revenue	5,774,973	7,421,482

It is, of course, unsatisfactory to see that the revenue is not yet less than the expenditure, but the difference in 1859, as compared with 1858, gives ground for satisfaction. The gross expenditure was, in 1859, $11,008,360. The gross income was $10,573,411. The total increase of Provincial liabilities, in 1859, was therefore only $451,979.

Automatic Car Coupling.

The many dangers attending the ordinary method of coupling cars, by stepping in between them and placing the bolt in position by the hand, renders any improvement, which will do away with the necessity of going between the cars very desirable. There have been many contrivances, by which inventors have sought to accomplish this object. Many patents have been granted, nearly all of which have been complicated in construction, unsafe in operation, and always getting out of order. The invention we have in mind was patented by Messrs. Lapham & Burns, May 25th, 1858, and from the simplicity of its construction, and the perfect working of the model which we have inspected, we do not see why it will not prove perfectly successful, when reduced to practical working upon our cars. The whole machinery consists of but three pieces—the common link, a tilting hook, and a crooked weighted lever resting upon a fulcrum. As the link is shoved into the bumper, it strikes the tilting hook, shoving it back and throwing up an arm between the sides of the link, and secures the link firmly against the interior front of the bumper. At this point the crooked weighted lever falls by its own weight, and securely fastens the tilting hook in its position, and the two cars are thus firmly fastened together. When it is desired to uncouple the cars, a chain or rod fastened to the crooked weighted lever is raised, and this relieving the tilting hook, the link is allowed to pull out. This seems to be so simple that it cannot but be successful, and the many lives annually lost will justify the expenses necessary to place them upon all our cars.

The New York Smelting Company.

We take pleasure in noticing the establishment of this Company for the purpose of smelting gold, silver and lead ores, inasmuch as it is the first effort that has been made in this country to divert a large and profitable business hitherto exclusively confined to Europe. There is no reason why the large and valuable product of our vast mineral region should, at additional cost of time, labor and money, be exported to Europe to be converted into metal; and we have no doubt that the facilities offered by this company, will afford an impulse to mining in the United States, which it has as yet been deprived of. Gold ores being principally treated by the amalgamating process, when rich in metal, do not so much require the aid of the smelter; but for silver and lead, when separate or together, or when containing a per centage of gold, the process in use at the Company's Works at Staten Island, is found most efficacious and economical. The ores, we learn, are purchased by assay, or the entire value paid to the proprietor less a charge per pound for smelting. The celebrated Washoe silver ores are being successfully treated in the furnaces, and also lead and silver ores from North Carolina, Vermont, New Hampshire, Newfoundland, New York and Pennsylvania.

It is simply a matter of fact that European smelters are realizing large fortunes in the prosecution of their business; and we can see no reason why the same result should not attend the same enterprise here, when conducted on the same principle, and with equal if not greater facilities, with the added advantage of being nearer the place of production thus saving time, cost of transportation and the onerous charges of the European merchant for wharfage, lighterage, insurance and commissions.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 4th April, 1860, were as follows:

	Th.29.	F.30.	Sat.31.	M.2.	Tu.3.	W.4.

The Schuyler Stock.

Mr. Cowdrey, of this city, has issued a circular requesting an authorization from holders of the spurious stock of the New Haven Company to sell it on their account at not less than $25 per share, payable in cash, or not less than $27.50 per share, payable in the mortgage bonds of the company at par and interest, or not less than $33.33 per share, payable in genuine stock—either of the methods of payment to be at the option of said Cowdrey, and the compensation for this service to be one dollar per share, and 10 per cent. of any excess obtained beyond the per centage named, and the payment to depend upon the success of the negotiation.

Journal of Railroad Law.

LIABILITY OF CONSIGNOR TO CARRIER FOR FREIGHT.

The ever-varying circumstances which, necessarily, attend contracts for the carriage of freight, must, we suppose, always give rise to differences of opinion in honest men's minds as to liability, and lead to more or less litigation. The case, which so far as the principle is concerned, we are about to set forth is one of the many instances of this kind; and we think it will be interesting to our readers, inasmuch as it strongly maintains the security of the carrier for his honestly earned freight.

The plaintiffs, A. & J. W. Jobbitt, ran a canal boat, in 1857, on the canals and lakes of the State of New York, and were common carriers of merchandise. As such carriers, they transported, on their canal boat, some lumber, barley and apples, for the defendants, Goundry & Hurd, from Dresden to Albany. When the plaintiffs received the property on board of their boat, they took a shipping bill, signed by the defendants, which stated that the plaintiffs had received $180 towards the freight, and that the captain of the boat was to deliver the property to J. Dorr, at Albany, and collect the balance of the freight from him at the time of the delivery. One of the plaintiffs gave the defendants a receipt of the property, which contained a statement similar to the one in the shipping bill.

At the time the plaintiffs delivered the goods, which was on the 30th day of November, 1857, Dorr stated that he had no money to pay the freight, but gave to the plaintiffs his check for $146.76, which was the balance of the freight due the plaintiffs. He had, however, no funds in the bank at the time to pay it with. At the time Dorr gave his check to the plaintiffs, he took a receipt, signed by the one who transacted the business, showing that the freight was paid. The defendants had previously advanced money to pay the freight to Dorr; but the plaintiffs did not know that fact. The plaintiffs endorsed and transferred Dorr's check on the day it bore date, but it was not paid; and they were sued on it as endorsers, and then paid it, and took it from the holder. They afterwards brought this action to recover the freight for which they had taken Dorr's check.

The action was defended upon two grounds: 1st. That the plaintiffs should not have delivered the property to Dorr, unless he paid them the freight on it. 2d. That the defendants were not liable to pay the freight to the plaintiffs, because they had advanced the same to Dorr, and the plaintiffs had taken his check therefor.

The jury, by direction of the judge, found a verdict in favor of the plaintiffs for $155.87, which was the amount of the check and interest thereon, subject to the opinion of the court at general term. The following is the opinion:

BALCOM, J.—It was held in Shepard *vs.* Dr. Bernales, that the usual clause in a bill of lading, engaging the master of the ship to deliver the goods to the consignee or his assignees, *he or they paying freight for the goods*, is introduced for the benefit of the master only, and not for the benefit of the consignor, and that therefore the master is not bound to the consignor to withhold the delivery of the goods, unless the consignee or his assigns pay the freight. And it seems to be established that a clause in a bill of lading, which directs the carrier to collect the freight of the con-

signee of the goods, on delivery, does not, in case of the carrier's neglect to collect of him, discharge the consignor's liability to pay the same. It follows that the delivery of the defendant's goods to Dorr, by the plaintiffs, without requiring him to pay the freight thereon, or the neglect or the failure of the plaintiffs to collect such freight of him, does not affect the defendant's liability to them for it; and that such facts constitute no defense to this action.

The defendant's counsel insists that the taking of Dorr's check, by the plaintiffs, when the goods were delivered under the circumstances disclosed by the evidence was a satisfaction of the plaintiff's claim for the freight, as against the defendants. The check did not operate as a satisfaction of the claim, unless the fair inference from the evidence is that the plaintiffs agreed that it should be received as payment of it. And it seems to me to be very clear that the plaintiffs could not have supposed the check was to operate as a payment of the freight, unless the Union Bank should pay it when presented. It is absurd to say that a creditor regards his demand as paid, when he receives a check for it from his debtor, on a bank. I think in ordinary transactions, the creditor has not the least idea that his demand is paid, though he may receipt it as paid, upon receiving the check of the debtor or of a third person, on a bank, for the same. He cannot be supposed to regard the check as a payment, or as a satisfaction of his demand, when the drawer has no funds in the bank to meet, and the bank refuses to honor it. And in this case I am of opinion the evidence does not warrant the conclusion that the plaintiff received Dorr's check, in satisfaction of their claim against the defendants for the freight, whether it should be paid by the bank or not; but that the fair inference from the evidence is that it was not agreed it should so operate unless the bank should pay it on presentation.

I am of opinion, for the foregoing reasons that the plaintiffs are entitled to judgment on the verdict. Decision accordingly for the plaintiff.

Wrightsville, York and Gettysburg R. R.

This road which extends from Wrightsville, opposite Columbia, to York and a junction with the Northern Central Railroad, is about 13 miles long. It is chiefly owned and operated by the Northern Central Railroad Company, and during the past year has entered into a new contract for certain purposes which are detailed in the following summary, the contract to be valid from 1st Oct., 1859, to 1st Oct., 1864. The Northern Central Company agrees to receive all the revenues, and pay all expenses, including $100 each to the President, Secretary and Treasurer of the company, and all outstanding bonds and floating debt, and a dividend of $1 per share on the capital stock; to charge for the use of cars and locomotives 40 cents per mile run by locomotives; to invest the net revenue, not exceeding $6,341—first, in paying the floating debt, and secondly, in paying the bonds, and whenever the amount to be appropriated to the Sinking Fund shall exceed the amount of dividend, say $3,641, being one dollar per share, then the excess shall be appropriated thus: one half to be added to the dividend, and the other half to the sinking fund. The Wrightsville, York and Gettysburg Company agrees to the canceling of all the bonds now invested in the sinking fund, and to cancel annually all future investments for sinking funds, and should the payments (as above) exceed the gross receipts, any deficiency shall be a charge against and must be first deducted from the amount to be invested in the Sinking Fund in succeeding annual settlements.

The revenue account under the contract dated 15th September, 1859, from 1st October to 31st December was as follows:

Receipts—		
From Passengers		$2,552
" Freight		3,485
" Mail		162
		$6,199
Balance carried down		477
		$6,676
Expenses—		
For 6,584 miles run by trains at 40c.		$2,634
Repairs of road		3,967
Salaries		75
		$6,676
Balance brought down		$477

The receipts for the whole year 1859 amounted to $26,700, being $1,246 less than previous year.

The ledger account stood thus on the 30th September, 1859:

Cost of road and and real estate	$400,046
Share capital (6,341 shares)	$317,050
Coupon bonds issued for debt to the late Balt. & Susq. R. R. Co. redeemable 15th Nov., 1867, interest quarterly	52,000
Debt due Northern Central R. R. Co	30,996
	$400,046

In accordance with the contract of Sept., 1859, the bonds of the company amounting to $48,000 invested in the Sinking Fund were canceled and destroyed, and the uninvested balance of $517 due the sinking fund credited to the Company's debt.

Of the total capital of the company, 3,173 shares, or $125,765, are held by the Northern Central Company, and also all the debt, together amounting to $208,761.

Covington and Cincinnati Bridge.

The new Board of Directors chosen by the stockholders, at their annual meeting, held in this city on the 5th ult., consisting of John W. Finnell, President, Miles Greenwood, R. B. Bowler and Rufus King, of Cincinnati, and N. B. Stevens, Amos Shinkle and Jesse Wilcox, of Covington, have completed their organization, and are determined to go energetically to work to secure, if possible, a speedy resumption of the work.

The Board presents the following statement:

Capital Stock		$413,000 00
Amount paid in cash, material and labor on subscription	$259,863 03	
Balance due, payable in cash	61,633 56	
Due payable in material and labor	50,192 20	
13 Covington City bonds.	13,000 00	
Due from City of Covington	28,612 21	
		413,000 00

There has been already expended on the work about $300,000, and it will require, to complete the bridge, in addition to the present available means of the company, about $500,000. Of this sum, it is confidently believed at least one-fifth can be obtained in subscriptions of labor and materials, in contracts yet to be made. If this expectation shall be realized, *there remains but $400,000 to be provided.*

The work already done, has been accomplished under the most favorable circumstances. The foundations were laid during the extreme low water in the fall of 1857. There has not been so favorable a season for such work for the past fifteen years.

The same work, if it could have been built at all, before or after the summer and fall of 1857, would have cost more than twice the sum paid by the company.

But all these advantages will be lost to the early friends and stockholders, if they delay too long the completion of the work. The *interest* on the sum already expended is lost, hence those who have put their money in the adventure are doubly interested in pressing forward the work. The value of real estate in the city of Covington would be enhanced by the bridge, greatly more than the sum now required to complete it.—*Cin. Enquirer*

Railroad Earnings.

Comparative statement of earnings and expenses, for the month of February, 1859 and 1860, of the Buffalo and State Line Railroad:

	1859.	1860.
EARNINGS.		
Passengers	$22,322 56	$23,146 51
Freight	44,632 33	42,899 64
Other sources	1,276 75	1,440 82
Totals	$68,231 64	$67,486 97
Decrease		$744 67
EXPENSES.		
Maintaining road	$6,860 95	$8,013 95
Repairs of machinery	4,006 00	5,266 89
Operating	15,039 66	15,048 43
Total	$25,906 61	$28,329 21

The earnings of the Chicago and Rock Island Railroad for March, 1860, were $76,241
March, 1859 64,774
Increase $11,457

The earnings of the Galena and Chicago Railroad for March, 1860, were $78,967
March, 1859 92,920
Decrease $13,953

The earnings of the Buffalo, New York and Erie Railroad for March were:

	1859.	1860.
Passengers	$11,662 62	$9,737 13
Freight	35,654 70	37,588 58
Other sources	1,686 86	1,686 86
Totals	$49,004 18	$49,012 53

The receipts of the Marietta and Cincinnati Railroad for January, 1860, were $30,725 77
January, 1859 29,262 60
Increase $1,463 17

Expenses of operating road, maintaining track, etc., Jan., 1860. $34,245 76
Jan., 1859 27,301 68
Increase $6,944 08

The earnings of the Hudson River Railroad for March, 1860, were $161,047 88
March, 1859 175,773 23
Decrease $14,725 25

The earnings of the road for the past six months have been $1,141,817 40
Corresponding period of previous y. 1,034,380 82
Increase $106,436 58

The earnings of the Cleveland and Toledo Railroad in March, 1860, were $85,802
March, 1859 75,330
Increase $10,472

The earnings of the Illinois Central Railroad in March, 1860, were $212,880 84
March, 1859 152,162 69
Increase $60,718 15

The earnings of the New York and New Haven Railroad for March, 1860, were $76,224
March, 1859 73,903

Increase $3,321

The earnings and expenses of the Memphis and Charleston Railroad, in February, were as follows:

Total receipts $159,462 58
Total expenses 68,980 49

Net receipts $90,482 09

The following are the February earnings of the Panama Railroad since its completion:—Feb'ry, 1855, $52,000; 1856. $107,100; 1857, $112,300; 1858, $108,770; 1859, $92,180; and 1860, $163,500.

La Crosse and Milwaukee Railroad.

The receipts of this road for the quarter ending February 29, 1860, were $110,892.49; and the disbursements for ordinary purposes, $77,113.11. In addition to which there were paid on account of November expenses, $20,659.10; for incumbrances on depot grounds, buildings, etc., $7,113.74; for equipment, $11,115.45; for bridge over Portage Canal, $3,275.85; for right of way, etc., $2,418.50—making a total of $44,582.64 for other than current operating expenses. In making these payments, $10,803.26 have been taken from the March receipts, not yet made up. The proportion of the receipts belonging to the Canal Grant division, included in the above, are $31,995.28; and of the disbursements, $43,389.03.

Missouri.

The Governor has vetoed the Railroad Bill recently passed by the Legislature of this State, and has called another session of the Legislature for the purpose of removing his objections. His action has caused a great deal of feeling in the State. It is of the greatest importance that the difference existing between the two should be reconciled, as all the unfinished roads of the State are at a standstill.

To Railroad Contractors.

SEALED PROPOSALS for the Graduation, Bridging, Ballasting and Track-laying of sixteen miles of the Junction and Breakwater Railroad from Milford to Georgetown, will be received by the undersigned until Tuesday, the 1st day of May next, upon which day the proposals will be opened and the lettings declared.

All necessary information can be obtained at the Engineer's Office in this place.

MILFORD, Delaware, April 2nd, 1860.

OFFICE, 51 EXCHANGE PLACE, N. Y.

Gold, Silver and Lead Ores.

THIS COMPANY ARE PREPARED TO PURCHASE OR RECEIVE ON CONSIGNMENT the above Ores on as favorable termans can be obtained in this country or in Europe.

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans, Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
162 West 28th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

THE IMPERIAL LUBRICATING OIL,

MANUFACTURED BY

J. C. HULL & SONS,

(Formerly W. HULL & SON,)

Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,

NEW YORK,

For Railroads, Machine Shops, Steamships, Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE,** Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Victoria Bridge.

(Continued from p. 303.)

Mr. Stephenson's estimate of the cost of these tubes is £57 sterling per linear foot, or $285. The weight of a single span between the bearings is given as follows:

Top of Tube	76 Tons.
Bottom of Tube	92 "
	168 Tons.
Sides	84 "
Total	242 Tons.

And it is said that the bearings bring the total weight of each span up to 275 tons.

There is a discrepancy, it will be noticed, in these figures, but I have taken them as given in the reports of Messrs. Stephenson and Ross. In comparing the relative merits of the tubular *plan* with other iron beams, viz: the Trellis girder, and the Warren triangle girder, their *apparent* difference may be explained in a few words. The tube is a rectangular box of the required height and width, constructed of boiler plate iron, the sheets connected together by laps or splicing plates, covering the joints, and strongly riveted to the main plates. The whole is stiffened by angle irons, T irons and web braces.

The Trellis girder is similar in the general arrangement of its parts to the wooden truss bridges in use in the United States, having a top and bottom chord, connected by a system of braces and ties.

The triangle girder has the same arrangement of chords, and these are connected by braces and ties; but instead of the braces crossing each other, forming what is sometimes called a *lattice*, they are so arranged as to form a succession of single triangles, extending from one chord to the other, a brace forming one side of a triangle and a tie forming the other.

Mr. Stephenson, in his report, says: "Now, in calculating the strength of these different classes of girders, one ruling principle appertains, and is common to all of them. Primarily and essentially, the ultimate strength is considered to exist in the top and bottom. The former being exposed to a compression force by the action of the load, and the latter to a force of tension. Therefore, whatever be the class of girders, they *must all be alike in amount* of effective material in these members, if their spans and depths are the same, and they have to sustain the same load. On this point, I believe there is no difference of opinion among those who have had to deal with the subject. Hence, then, the question of comparative merit among the different classes of construction of beams and girders, is really narrowed down to the method of connecting the top and bottom."

Now if this proposition be correct, the whole question dwindles down merely to the saving to be made in the sides; or to the possibility of reducing the weight of a fractional part only of the bridge. The primary proposition, that in all beams of every description the same principle prevails; and that the strength depends upon the top and bottom, the first being subjected to a force of compression in the direction of its length, and the other to a force of extension, is an admitted one; and it is self-evident that, if of same depth and same length, and subjected to the same load, they must be alike in the amount of material in the top and bottom; but *with the important proviso* that the material *must be alike, and equally well disposed, to perform the duty for which it is intended.*

"Primarily and essentially" there are three conditions to be fulfilled in a proper girder. 1st. A material should be used which has the greatest strength for a given weight. 2d. The material should be of such description as will permit the necessary connections of the different parts of the required girder to be made with the least amount of *superfluous* weight. 3d. Such a plan of structure should be adopted as will permit the use of materials of the *best possible forms* to resist the strains to which they are subjected. And all these conditions are to be complied with at a "judicious expenditure."

If, by a comparison of the Victoria tubes with other descriptions of girders of equal span and *less cost*, it can be shown that these conditions are not fulfilled, then the expenditure is not "judicious."

The *principles* involved do not differ between the tubes and other beams, either of wood or iron. *But here the similarity ceases.* In the tube the material calculated to resist the strains of compression and extension is spread out in thin plates, covering the whole top and bottom of the bridge—the two being connected with the sides at their edges; while in the trellis and triangle girders, like the wooden trusses of America, the material is collected at the angles, directly where the connection is made with the sides. Here is a very marked difference in the *disposition* of material in top and bottom. The weakening of the material, dependent upon the different modes in which the parts are necessarily connected, and the additional weight required for these connections, differs materially also in these classes of beams.

Another point of difference is the relative strength of boiler plate and bar iron. All these distinct features are matters of consideration when comparing their respective merits. Hence, I am not presumptuous in saying that when Mr. Stephenson asserts "they must *all be alike in amount* of effective material in these members if their spans and depth are the same, and they have the same load to sustain," he adopts a conclusion that cannot be admitted for a moment; and if it were not that the whole of his argument in support of the superiority of the tube was based upon this statement, I should believe that the omission of the proviso I have mentioned, was either a clerical or a typographical error.

The ultimate tensile strength of bar iron of good quality given in Mr. Liddell's tables, which he states are results of trials at various times on bars

varying from one square inch to nine square inches section, is:

	Tons per sq. inch.
Welsh iron	24 to 28
Staffordshire	24 to 28
Scotch (Govan)	24 to 29
Yorkshire Lowmoor	26 to 32
Scrap (Howard & Co.)	26 to 32

The average of all these is about 27.3 tons per square inch. The value assumed usually for bar iron of good quality is 30 tons.

The average strength of boiler plate, deduced from experiments made on specimens of only half an inch sectional area, so that the strains was *diffused perfectly* over the whole metal, was as follows:

	Tons per sq. inch.
Shropshire	22½
Staffordshire	20¼
Derbyshire	20⅛
Yorkshire	25½

The average of these is 22.1 tons per square inch. At these relative strengths, then, the quantity of material necessary to obtain the same amount of tensile strength would be—

Of bar iron	1
Of boiler plate	nearly 1.25

—yet, with the exception of the best scrap iron, boiler plate is more expensive always than bar iron.

Now the bottom chords of a beam, when made of bar iron, can no more be made in one piece, than can the bottom of a tubular bridge; but the chord made of bars can be connected by an addition to the weight of 10 per cent., while a continuous bottom of boiler plate will require at least 30 per cent.; for in the riveting of the latter, it is quite evident that the plates are weakened to the extent of the rivet holes. If these are three times their diameter apart, center to center, it is evident that (as the sheets break joints) at least 16⅔ per cent. of the section would be cut off by them. Therefore, for every square inch of effective material in the plates, there would be one-fifth of a square inch of non effective material—20 per cent. more than the strain requires, being therefore a necessity of construction merely. But let us call it 15 per cent. An equal amount may be added for the splicing pieces, called covering plates, and the rivets. We have, then, to add to our figures, as follows:

Am't required of bar iron for given str'gth.	1.
Add for connections	.1
Total	1.1
Amount required of boiler iron for same strength	1.25
Add for rivet holes	.1875
Add for covering plates and rivets	.1875
	1.6250

The proportion is as 1 to 1.47. The same tensile strength, therefore, that exists in the bottom plates of the Victoria bridge, which weigh 92 tons each span, can be obtained with 62 tons of good bar iron. The experiments made at the Britannia bridge give only 20 tons per square inch, as an average of the different kinds of boiler iron cited. Is it not a mistake, then, that all kinds of iron girders "must be alike in the amount of effective material in the *bottom*, if their spans and depths are the same, and they have to sustain the same load."

It is a well understood principle, that in a strut with a given sectional area, the resistance to a force of compression in the direction of its length, depends largely upon the form in which the material is disposed, that is to say upon the shape of its section. It is quite evident that a broad thin plate would give to such a force sooner by "*buckling*," than if the same amount of material was condensed into three times the thickness and one-third the width. The form then in which the "effective material" is disposed in the top member of a bridge may be admitted to be a very important matter. I copy the following from Mr. Liddell's report:

"From Mr. Hodgkinson's experiments, made for Mr. Stephenson, it appears that the resistance of plates of the same length and breadth, but varying in thickness, is nearly as the *cube* of the thickness." Royal Com. Rep. App. (A. A.) pp. 119, 120.

From this, it will be seen that a plate six inches wide and one inch thick, will sustain *four times* as much pressure in the direction of its length without "*crippling*," as a plate 12 inches wide and a half inch thick, although the "amount of effective material" would be the same. Hence the importance of such an arrangement as will permit *thicker forms than boiler plate to be used.*

The same series of experiments upon small rectangular tubes showed "that when the *thickness* of the plates was the same, the strength of the smaller tube was greater than the larger." Thus in a rectangular tube, made of metal, one-sixteenth inch thick, *subjected to compression in the direction* of its length—the tube being 8 inches by 4 inches (10 feet long)—the strength per square inch of section was 6.79 tons, in a tube of same metal 8 inches square, it was only 5.9 tons, while in a tube 4 inches square it was 8.6 tons.

There is a vast distinction then to be made between resistance to *crushing* and resistance to *wrinkling* or *crippling*, for while a square inch of section, in a proper form, may resist 25 tons of compression before crushing, the same area as a part of a thin sheet might fail, by crippling or buckling, with a strain of 5 tons. Hence the form in which the effective material is disposed, has very great bearing on the duty it will perform. Under ordinary circumstances the properties of resistance to crushing and resistance to extension in wrought iron, as determined by numerous experiments, are found to be as one to two—that is to say, a *solid* beam of wrought iron should have twice as much material in the bottom as in the top. If this rule would apply to a hollow tube of thin plates, the bottom weighing 92 tons, as in the Victoria bridge, the top would have sufficient strength with 46 tons. The Victoria bridge has 76. Mr. Dempsey, in his work upon the Britannia bridge, says:

"These proportions (viz: 1 to 2) refer to *solid* girders, and, of course, are applicable *only* within certain limits. * * That these rules *will not equally apply to hollow or tubular girders* might be readily anticipated, and *has been proved* by the experiments undertaken by Mr. Fairbairn in determining the dimensions and proportions for the Britannia bridge."

"Practically, however, the results of these experiments are of the highest value as bearing upon *the limits of strength* of girders of wrought iron built up or *constructed of plates* in the manner proposed and adopted for tubular bridges. In solid girders the *ultimate* strength of the material may be obtained, "but in those formed of wrought iron plates connected with rivets, ribs, etc., *the constructive strength of the work rather than the absolute strength of the material* is the point of practical importance in the design. In these cases the term "compression" is scarcely properly applied; the effect produced being really, as described by Mr. Fairbairn, "*a crippling or doubling up.*" The power to resist compression thus becomes a power to resist *bending*, and this is comparatively *small* in thin sheets or plates even of wrought iron. In like manner the cohesive or tensile power is practically reduced to that of the rivets to withstand the strain upon them." I will not occupy space by giving all the experiments which demonstrated these facts, but will simply refer to a few which have a direct bearing upon this point. In experiments numbered 17 and 18 upon a tube 17 ft. 6 in. long and 9.6 inches square, the top one-half the thickness of the bottom, the tube failed first with a weight of 3,788 lbs. by its upper side *crippling*. It was then turned over with the thick side uppermost, when the breaking weight required was increased to 7,118 lbs. showing its strength to have been nearly doubled by simply turning it upside down. In experiment No. 24, the top was made about 30 per cent. heavier than the bottom, but with two longitudinal corrugations extending its whole length. This was loaded until it failed by tearing the sides from the top and bottom, but the corrugated top resisted the strain without *crippling*. "I have deemed it essential," Mr. Dempsey says, "to direct attention to these results as facts of immense value in the *proper and judicious application as well as distribution of the material* in the proposed structure."

From another series of experiments it was found that the thickness of the plates being .525, .272, and .124 inch; the resistance *per square inch* was 19.17, 14.47 and 7.74 tons respectively, disregarding the weight of the beams.

The value of the compressive strength of bodies of the same nature is usually constant, but these experiments show that it is *variable in tubes*, representing merely their power to resist *crippling* and this power does not depend entirely upon *amount of section but form.* "The determination of this value," Mr. Dempsey remarks, "which can only be obtained from experiments, forms the *chief obstacle for obtaining a formula for the strength* of tubes of *every form*, and Mr. Stephenson in relation to these experiments also said: "These results show that *in such tubes* the power of wrought iron to resist compression, is much *less* than its power to resist tension." It is unnecessary for me to refer further to these experiments to prove, that although primarily and essentially, as Mr. Stephenson says, the strength of every iron bridge lies in the top and bottom and in their resistance to the forces of compression and extension—yet when he says, "they must *consequently* be alike in the amount of effective material in these members if they are of the same length and depth and designed to sustain the same load," he publishes what every engineer who examines the subject a moment, will consider a most vague and uncertain declaration of the principles governing the dimensions of the parts of these different beams.

The cellular top of the Britannia bridge was

devised to avoid the difficulty from the *crippling* of broad plates.

Experiments in a tube which was in its proportions designed to be a model of the Britannia bridge gave as final results, that a cellular top similar to that in the model will fail with 14.8 tons of compression, and the bottom with 18.6 tons tension.

That the value per square inch of the top of the Victoria bridge to resist compression must be below this, cannot be doubted, as it is *not* cellular; but in the absence of any knowledge of the strength of the tops of these particular tubes, which according to Mr. Dempsey *"can only be obtained from experiments* or tubes of every form," we will assume it he same as in the cellular top of the Britannia tube, viz, 14.8 tons per sq. inch. As in the Trellis and Warren girders, the material in the top is condensed into a small compass at each angle, it is evident that its full value to resist compression can be obtained, for it can be rolled of *the best possible form to perform its duty.* As before stated, the proportional values of wrought iron to resist the strains of extension and compression in a solid beam are about as 1 to 2. The value of the former we have taken in the lower chord at 27.3 tons per sq. inch. The value per square inch to resist compression in the upper chord would at this ratio be 54.6 tons. But to provide for the length of the portions of these chords between the points of support—we will consider their value the same as for extension only, viz, 27.3 tons.

Reduced to a unit the proportional amounts of material required for the same strength would then stand—

Of bar iron	1.00
Add 10 per cent. for connections	0.10
	1.10
Of boiler plate	1.84
Add 15 per cent. for plates and rivet heads	0.27
	2.11

The proportion is as 1 to 1.92.

Upon this proportion the same strength which is represented in the top of the Victoria tube by 76 tons of boiler plate and rivets might have been obtained by about 40 tons of iron bars.

The aggregate of top and bottom would be of

Boiler plate	168 tons.
Bar Iron	102 "
Difference	66 "

Mr. Liddell says: "But if instead of a bottom web of boiler plate 16 feet wide, I can use two sets of bars concentrated within the compass of a square foot for the bottom, and if instead of a web, or cellular structure of thin boiler plate extending over 16 feet in width for the top I can use thick bars or beams of metal rolled, of the quality and shape required for giving the strongest form to resist compression, it is evident that the amount of *"effective material"* in the two forms of bridge for the same strength would require to be for the top 14.8 sq. inches in this form to 25 sq. inches in the tube, and for the bottom 18.6 sq. inches to 26 sq. inches in the tube. For these figures represent the inverse proportion of the ultimate breaking weights of the materials, arranged in the form in which they present themselves in a tubular bridge and a Warren bridge respectively."

Taking these proportions as estimated by Mr. Liddell, we have amount of material for the bottom chord of the Warren or Trellis bridge... 1.00
10 per cent. added for connections ..... .10

1.10

For the bottom of the tube..... 1.40
Add for covering plates and rivets 15 per cent..... .21
Weakening by rivet holes, 15 per cent..... .21

1.82

The proportions of material necessary to resist same tension are:

Of bar iron	1.00
Of boiler plate	1.65
For amount of material in top chord of Warren or trellis bridge	1.00
10 per cent. added for connections	0.10
	1.10
For the top of the tube	1.70
Add for connecting plates, etc.	0.25
	1.95

The proportions of material then necessary to resist same compression are:

Of bar iron	1.00
Of boiler plate	1.77

That is to say, instead of using 92 tons of boiler plates in the bottom, the same strength can be obtained by 55.7 tons of bar iron, and instead of using 76 tons of boiler plate in the top, the same strength can be obtained by 38.9 tons of bar iron. The aggregate of top and bottom being—

Of boiler plate	168 tons.
Of bars	94.6 "
Difference	73.4 "

According to my calculations, the difference in weight of material would have been 66 tons, but I have taken a higher value for the tensile strength of boiler plate than allowed by Mr. Liddell, and also a slightly higher value for the compressive strength of bar iron in the top of the Warren and Trellis girders. It would appear, therefore, that the extra weight of material in the top and bottom of one of the Victoria tubes, consequent upon the *weakness* of the kind of material used, and the *form* in which it is *disposed* and *connected* is about 70 tons.

(To be continued.)

Fort Wayne and Southern Railroad.

The revival of this great enterprise, which has been for years in an unfinished condition, and been regarded as dead, is again being agitated. A letter from one of the officers of the company discusses the proposition to complete the road from Tripton to Jeffersonville, a distance of fifty-one miles. Some $100,000 have already been expended on the work, too great a sum to lose altogether without an effort. The road passes through an excellent region for timber, stone and farmlands, as well as several flourishing towns, to the city of Jeffersonville, with the right of way to low water mark, on the Ohio River, and connects the two great central Western cities, Louisville and Cincinnati, by railroad.

It is estimated that if $100,000 is pledged along the line, payable when the cars are running over the road, the work will be resumed and completed. This sum could be raised if the residents along the road two miles on each side, would contribute $35 for each forty acres of land, in addition to what the towns along the line will subscribe. It is suggested that meetings be held at various points on the road, to ascertain what can be done toward raising the required amount.—*Cin. Enquirer.*

Seaboard and Roanoke Railroad.

The income of this company for the fiscal year ending January 31, 1860, was:

From Passengers		$92,772 25
" Freight		129,764 22
" U. S. Mail		8,000 00
" Rent of Weldon Bridge		5,500 00
" Dividend, interest, wharfage, etc.		4,409 63
		$240,446 10

The operating expenses were:

Repairs of road	$36,555 61	
" engines and cars	17,377 61	
Train expenses	24,834 86	
Depot "	28,720 83	
Salaries	5,083 33	
Miscellaneous	6,821 10	
		119,393 34
Leaving as net revenue		$121,052 76
To which add—		
Balance from previous year		12,023 33
Sales of Raleigh and Gaston Railroad Stock		21,012 50
Bills payable and accounts		20,216 64
1st mort. bonds extended and sold		1,900 00
		$176,205 23

Of which there has been expended:

Div. on guaranteed stock, interest, discount and exchange	$46,571 41	
On contract for building steamer	57,363 58	
Com. on extending bonds.	3,300 00	
Settlement of claim	6,426 00	
Monument to Dr. Collins	700 00	
Accident in 1856	10 00	
		114,371 02
Leaving of available means		$61,834 21

The net revenue of the past has largely exceeded that of any former year; at the same time the road and property of the company has been kept in thorough repair. The profits of the year's business, after paying the interest on the entire debt of the company, equal 10 per cent. on its capital stock.

A statement of the funded indebtedness of the company is given in the annexed balance sheet. The whole issue of first mortgage bonds named therein, mature in August next. Of this sum, one-half, or $150,000, have been extended for 20 years. It is thought that a still further amount will be extended. If not, the greater portion can be met by funds already provided for that purpose, and from earnings of the road during the intervening period. At most, but about $50,000 will have to be raised to retire the remainder of the issue.

Steamers from New York, Boston and Providence, now stop at Norfolk, on their trips to and from Southern ports.

A steamboat line has also been established by this company between Portsmouth and Seaford, with a view to a connection with the Delaware Railroad, which has already been completed to the Maryland line. The Eastern Shore Railroad is completed from the State line to Salisbury, and is destined to run to Little Annemesic river, on Tangier Sound, distant but 84 miles from the terminus of this road, and will, in connection with it and the steamboat line, form a direct route along the seaboard between the North and South.

The boat which has been placed on this line was constructed expressly for the purpose by Messrs. Reaney, Neaffey & Co., of Philadelphia, under the supervision of the superintendent of the road. She is of iron, 201 feet long, 552 tons

burthen, and is well equipped for the transportation of freight and passengers. Her entire cost, including furniture, was about $67,000.

With this route established, there will be running to and from Portsmorth a daily line of steamers to Baltimore; a tri-weekly line, by the way of Seaford, to Philadelphia; a weekly propeler line to Philadelphia; two lines, one tri-weekly, and the other semi-weekly, to New York; and a semi-weekly line to Boston and Providence, thus affording every facility for the direct and speedy transportation of freights, and which cannot fail to attract to this road and to the Norfolk and Petersburg road, which equally participates in these advantages, the greater portion of the business of the large area of country respectively connected with them.

The equipment of the road consists of 10 locomotives; 5 passenger, 2 smoking and mail, 4 baggage, and 161 freight and construction cars.

The number of miles run by locomotives was 119,127; by passenger cars, 50,791; by freight cars, 68,336.

The number of passengers carried was 36,342; tons of freight, 22,902.

ASSETS.

Cost of road and property		$1,469,245 83
Paid for steamer Philadelphia		57,363 58
Bonds of the Roanoke Valley R. R.		1,200 00
Purchase of Co.'s 1st Mort. bonds		25,100 06
Debts due the company		67,717 36
Cash on hand Jan. 31, 1860		19,021 59
		$1,639,648 36

LIABILITIES.

Capital stock		$619,200 00
Preferred stock, with guaranteed dividend of 7 per cent.		225,000 00
First mortgage bonds	$330,000	
Third "	75,000	
Fourth "	4,000	
Convertible bonds	8,320	
Do., issued for dividends	85,491	
		472,811 60
Debts due by the company		52,926 31
Surplus earnings		269 711 05
		$1,639,648 36

The road is 80 miles in length, extending from Portsmouth, Va., to Weldon, N. C. The office of the company is at Portsmouth. The officers are:

President—SAMUEL M. WILSON.

Treasurer—RICHARD WALKE.

General Superintendent—JOHN M. ROBINSON.

Cedar Rapids and Missouri Railroad.

The President, Hon. L. B. Crocker, of Oswego; the Treasurer, John Weare, Esq., of Cedar Rapids, and other gentlemen interested in the Cedar Rapids and Missouri Railroad, are in this city, and from them we learn that the land grant recently transferred from the Old Iowa Central to this company is larger than we expected. Within fifteen miles of the line a large amount of lands were pre-empted previous to 1858, which will be forfeited, and be made available to the company. They believe that the lands thus granted and available for building the road, will amount to one million of acres. The lands are entirely unincumbered, and if properly managed, as we have not the least doubt they will be, they are worth more than the road will cost. Responsible parties stand ready to build the two hundred and thirty miles of road, depots, water tanks, &c., for $15,000 per mile. That would amount to $3,450,000, while the lands can be made to realize at least $5,000,000. That certainly will be sufficient to build and equip the road.

The building of sixty miles of road will carry it through Van Buren and Tama counties, and extend it into Marshall. The two last are among the best cultivated and the richest counties in Iowa. Those best acquainted with their population and resources believe that they will furnish sufficient business to make the road pay.—*Chicago Tribune, 5th.*

☞ A proposition is now being submitted to the merchants of Louisville for aid to build a short line of railroad from the town of Hamburg, Tennessee, to Corinth, in Mississippi, on the line of the Mobile and Ohio road. Hamburg is at the head of navigation on the Tennessee river, and is well known as a shipping point for the distribution of merchandise to Tennessee, Mississippi and Alabama. The length of the proposed road is but 19 miles. The Mobile and Ohio Company pledge themselves, so soon as the required amount is taken, to let the contracts for the grading and cross-ties of the branch, and to iron and equip it as soon as graded.—*Ex.*

Michigan Southern and Northern Indiana Railroad.

We have received the report of this company for the fiscal year ending March 1, 1860. The earnings from operations of the road during that time were:

From through passengers		$360,540 61
From way passengers		353,595 63
Total from passengers		$714,136 24
From mails	$54,025 91	
From express	21,158 69	
		75,194 60
Total on passenger trains		$789,330 84
From through freight	$329,424 58	
From way freight	616,647 66	
From storage, etc.	9,679 65	
		955,751 89
From miscellaneous		49,863 36
Total from roads		$1,794,946 09
From steamers chartered	$3,000	
Dividend from propellers	5,250	
One year rents of parts of station at Toledo	14,900	
Income from securities pl'dg'd	16,325	
		39,475 00
Total earnings from all sources,		$1,834,421 09

The expenses of operating and maintaining road were:

General superintendence	$14 971 75	
Agents and clerks	66,144 39	
Freight agencies	29,465 86	
Telegraph operators	8,797 14	
Stationmen	81,989 97	
Train hands	121,756 95	
Repairing road & bridges	293,567 84	
" buildings	14,934 11	
" engines	103 668 27	
" cars	80,335 37	
" machinery, etc.	27,231 94	
Fuel	87,175 76	
Oil and waste	21,297 81	
Legal expenses	15,460 50	
Loss and damage	16,186 53	
Overcharges refunded	16 310 62	
Taxes	58,235 64	
Rents	6,295 18	
Steamers	7,756 12	
Contingencies	8,174 61	
Miscellaneous	23,447 69	
	$1,053,204 08	
Add construction expenditures	3,176 32	
Add decrease of materials on hand	48,851 19	
Add expenses of New York Office	20,693 36	
	1,125,727 95	
Net earnings exclusive of interest		$708,493 14

The interest account for the year is as follows:

On funded debt, secured by mortgage	$642,250 00	
On funded debt, unsecured (plain bonds)	32,200 00	
Interest paid on float'g d't	36,870 51	
Exchange, commissions, etc.	9,236 25	
Erie and Kalamazoo Railroad rent	28,500 00	
	748,556 76	
Deficiency of earnings in paying expenses and interest		$40,063 62
If to this be added for the amount of 1 per cent., payable to the Sinking Fund as the contribution of the last year on the basis established by the Directors		32,935 80
The deficiency will be		$72,998 62
Per centage of expenses on earnings, 61½.		
Last year, 1858, the earnings were		$2,019,424 96
Last year, 1858, the expenses were		1,196,126 54
Per centage of expenses on earnings, 61½.		
The gross earnings of the year ending March 1st, 1859, were		$2,019,424 96
Year ending March 1st, 1860		1,834,421 09
Decrease		$185,003 87
The expenses of all kinds in the former year were	$1,242,152 23	
And for the last year	1,125,795 67	
	116,356 56	
Making net decrease of earnings		$68,646 51

The total construction account is $16,837,291 28.

		$188,000

FLOATING DEBT.

The last report stated this to be Nov., 1857		$2,281,760 00
Items ascertained the past year		33,767 00
Ascertained am't as of Nov., 1857		$2,415,527 00
That report also repres'ted this debt, Mar. 1, 1859, as	$1,211,007 00	
Add as above, items since ascertained	33,767 00	
Ascertained am't, as of Mar. 1, 1859		$1,244,774 00
The Floating Debt proper, March 1, 1860, was		685,598 51
Of this there is secured by collaterals and mortgages	$408,204 00	
Unsecured	277,394 52	
		685,598 51
Under this head last year there was included as due the Commissioners of Sinking Fund		101,691 20

The payments due that fund has been assumed as 1 per cent. on the authorized issue of bonds under the mortgage—or at least $6,750,000 being the authorized amount, exclusive of the issue authorized for a double track. But a majority of the present Board decided that the payment should be limited to the actual issue of Sinking Fund bonds for the time being. On this basis nothing is due to the fund.

Add pay rolls and vouchers of January and February, 1860, to be paid in March and April	$168,562 54	
Estimated contingen's due at the West	5,000 00	
Total	$173,562 34	
Less cash in hand of Treasurer and agents	33,392 96	
		$140,169 88
Making		$825,767 89

It is proper to add coupons overdue Feb. 29, 1860, viz:

On mortgage bonds	$243,380 71	
On plain or unsecured bds.	17,220 00	
		261,025 71
Total floating debt March 1, 1860		$1,086,793 60

To pay this debt the company own sundry assets in the hands of trustees, or pledged with sureties for security of parts of the debt (worth at least $400,000)

Unsold bonds of the Detroit, Monroe and Toledo Railroad Co	$640,000 at par.	
Unissued 2nd general mortgage bonds	738,000 "	
Stock in the Detroit, Monroe and Toledo Railroad, guaranteed 8 per cent. interest	278,000 "	

Three first-class steamers.

The contingent liability of this company on their guaranty of $200,000 of the bonds of the Cincinnati, Pern and Chicago Railroad Co. remains as stated in the last report.

It will be seen that the first mortgage bonds of the Michigan Southern Co. to the amount of $993,000 will fall due on the 1st of November next. The directors do not anticipate that these can be paid in *cash* at maturity. It is proposed to offer to exchange for them sinking fund bonds, on terms which may be agreed. Or if the holders of the maturing bonds prefer they can retain them with all the security and rights appertaining to them, and receive their interest on presentation of their bonds to the proper officer; or new sheets of coupons for — years can be issued on presenting the bonds therefor. If the interest is not paid on the new coupons as they mature, the bondholders can still enforce their mortgage security for the collection of interest or principal.

In the first seven months of the year there was a decrease of $329,045 91 in passenger and freight earnings, and in the last five months an increase of $101,419 04.

COMPARATIVE EARNINGS FROM THROUGH AND WAY BUSINESS.

Earnings from	Through.	Way.	Totals.
Freight	$329,424	$616,647	$946,072
Passengers	360,541	353,596	714,136
Mails and express	75,195	.....	75,195
Storage, etc.	.....	.....	9,680
Miscellaneous	.....	.....	49,863
Steamers, propellers, and rents	.....	.....	23,151
From increase of securities	.....	.....	16,325
Totals	$765,160	$970,243	$1,834,421
Same in 1858-9	838,109	1,006,792	2,019,425
Decrease	$72,949	$36,549	$185,004

Showing that the way business more than holds its relative proportion in comparison with the prior year.

The whole number of engines belonging to the company is 89—of which 57 are in good order; 5 in fair order; 6 require repairs; 2 general repairs; 2 are undergoing repairs; 7 require re building; and 10 are out of use.

The whole number of cars, each kind, owned by the company, is as follows: 70 first class passenger; 18 second class and emigrant; 2 drovers; 1 paymasters; 22 mail, baggage and express; 566 box freight; 98 stock; 263 platform; 2 wrecking; and 30 dumping cars—making a total of 1,072.

GENERAL STATEMENT, *March* 1, 1860.

Railroad and equipment		$14,821,258 86
Erie and Kalamazoo Railroad construction		372,411 28
		$15,193,670 14
Amount expended on the Detroit, Mon. & Tol. R. R.	$1,523,785 98

Total		$19,975,961 64

The whole number of miles run by locomotives was: by passenger trains, 669,482; by freight trains, 704 349; by other trains, 156,247—making a total of 1,530,078. The average number of miles run to one pint of oil was 22.04; to one cord of wood, 54.95. Average cost of repairs per mile 6.81 cents; of wood, 5.53 cents; of wood, oil, waste and repairs, 13 cents.

The officers of the company are:

President, GEORGE BLISS, Toledo, O.
Gen. Supt., JOHN D. CAMPBELL, "
Treasurer, WM. SAVAGE, "
Assistant Treasurer, F. E. WORCESTER, New York.
Auditor, JOHN J. ADAM, Toledo, O.

Illinois Southern Railroad--Vincennes to Cairo.

At a recent meeting of the City Council of Vincennes, the committee appointed at a previous meeting to confer with the Directors of the Illinois Southern Railroad Company, reported that in their opinion said company would bring the road to Vincennes, if proper steps were taken by the Council. The $20,000 subscription ordinance was taken up and passed, after being amended to provide for the issuing of scrip in small amounts. It provides for the payment of $1,000 on each mile of grading, as the work may be completed on the Illinois side of the river, $8,000 to be paid when the road is completed and iron laid to St. Francisville from Vincennes, and the further sum of $2,000 for the construction of depot, &c.—*Cin. Enq*

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in *"italics."*

Vicksburg, Shreveport and Texas Railroad.

The Monroe *Register* of the 29th ult., says that "$45,000 of the First Mortgage bonds of this company have been sold in Savannah, at 80 cents on the dollar; and the agent who negotiated the sale, has sent for $50,000 more, which he thinks he will be able to sell on the same terms."

Yazoo Valley Railroad.

The Jackson *Mississippian* announces that the vote recently taken in that city "resulted almost unanimously in favor of a subscription of $100,000 to the Yazoo Valley Railroad—which will make a total subscription of $160,000 for Jackson."

Michigan Southern Railroad.

We give in another column a full abstract of the late report of this company. In the amount of information it conveys, it is an improvement upon the former reports of the company. It does not, of course, give a flatter picture of the affairs of the company, as the earnings for the past year were not equal to the interest accruing on the company's debts. The earnings of the branches as well as the main line are given *in part*. The main line, 243 miles long, earned $1,325,324; the branches, 282 miles, $334,484. The operating expenses are only given in gross. The cost of operating the branches exceeded, we presume, the receipts from them. The cost of the branches exceed that of the main line by at least $2,000,000. More than one-half the entire cost of the road consequently has been thrown away on the branches!

Improvement in the Value of Railroad Property.

There has been a very great improvement in the value of railroad property within the past two months. There is considerable speculative feeling in the market; but the improvement is, no doubt, due to a more correct appreciation of the value of railroad securities. As it is, many are still selling far below their value. A few months more will place them near where they were before the reverses of 1857. The increased traffic on all our roads will help to restore confidence, while a more rigid economy in their management, will add largely to their available earnings. The period of greatest depression and discouragement has undoubtedly passed. In all but the Western and North-western States, railroads were never doing so well as at the present time. In the latter there is a decided increase in the earnings over the past year. On the whole, the prospect before us is much more agreeable than for years past.

Buffalo, New York and Erie Railroad.

The following is a comparative statement of the earnings and expenses of this road for 6 months from October 1, 1858, to April 1, 1859, and for the same period in 1859-60:

	Earnings.	Expenses.
1858-9.		
October	$59,608 72	$38,165 85
November	52,794 76	31,940 16
December	48,694 51	33,098 57
January	37,367 33	27,884 90
February	33,505 34	21,684 52
March	49,004 18	26,865 23
	$280,974 84	$179,639 23
Surplus 1858-9		$101,335 61
1859-60.		
October	$54,886 27	$29,870 59
November	56,285 15	32,990 91
December	44,637 42	29,116 40
January	33,649 74	23,305 82
February	35,007 13	20,620 99
March	49,012 57	27,000 00
	$273,478 28	$162,904 71
Surplus 1859-60		110,573 57
Net gain, 6 months, 1859-60		$9,237 96
Surplus for 6 months of 1859-60, to 1st April		$110,573 57
Interest for the same period on total debt of the Company		87,990 00

Actual net earnings for 6 months, $22,583 57

Net earnings equal to 3.31 per cent. on $680,000, the capital stock of the company.

India Rubber Car Springs.

Charles Goodyear and The New England Car Spring Co. *vs.* The Elastic Cone Spring Co.
U. S. Circuit Court, District of New Jersey.

In the above suit, the New England Car Spring Co., who have the exclusive right throughout the United States for making, vending and using springs, bumpers, &c., for railroad cars and carriages under the well known Goodyear patent for vulcanizing India Rubber and allied gums, applied for a preliminary injunction to restrain the defendants from making and vending the car springs heretofore sold by them; some stamped John J. Fields' patent, and some Joslin's patent, and others Joslin and Eaton's patent, and all of them stamped "The Elastic Cone Spring Co."

The defendants opposed the motion on the ground that their springs were vulcanized under a patent granted to Henry W. Joslin and A. K. Eaton, by which they were authorized to vulcanize India Rubber with a preparation of surphur and red shale; and that until the suit was brought to a final hearing the court could not stop them by a preliminary injunction.

Affidavits were read on both sides, and after arguments against the motion by Ex-Chancellor Williamson and Jas. P. Bradley, Esq., on the part of the defendants, and by C. M. Keller, Esq., on the part of complainants, Judge Dickerson ordered an injunction to issue that the Elastic Cone Spring Company no longer manufacture or sell springs. The decision was made on the 5th inst.

A similar injunction was granted in February last against Joslin & Dunbar, of Trenton, New Jersey, manufacturers of springs for the Cone Spring Company.

The Manhattan Oil Company.

This company has been organized under the General Laws of this State for the sale of oils generally; but especially for the manufacture and sale of an oil known as "*Mason's Sperm Oil.*" This oil, which is now coming into general use, is the product of simple animal oil, manufactured under a process by which not only the fibrous matter contained in the oil is dissolved, leaving nothing but the pure oleaginous globules, as in sperm, but at the same time, and by the same process, the body, or durable character of the oil, is increased to a degree exceeding that of sperm itself. The objection to the use of whale or lard oils, is the gumming-up of the bearings, caused by the gluten which they contain, the particles of which are flat, and when they pass between the journal and the bearing, they lay flat upon the surface of the pocket, and will not roll through like the round particles of oil.

This oil has now been in constant use, for a number of years, by many of our principal railroad and steamship companies, all of whom concur in pronouncing it a superior article, for lubricating purposes. "It will remain limpid at a much lower temperature than sperm." "It is more durable, more free from gum, and cheaper (at the same price) than sperm." "Neither age or exposure to the atmosphere affects its qualities." "It is easily and rapidly cleaned off." "As a burning oil, it is very superior, giving a pure, brilliant light." "It has more body;" "is more penetrating in its nature;" "feeding where oils less limpid will not reach." These, and other expressions of a like purport, are derived from a number of testimonials from parties who have used it. The office of the company is at 16 Broadway, N. Y. Address James M. Motley, Esq., Vice President and Treasurer.

Cleveland and Mahoning Railroad.

The operations of the Cleveland and Mahoning Railroad for January, February and March have been as follows:

1859.	Gross Earnings.	Expenses.	Net.	
Jan'y ..	$13,400.70	7,666.11	5,744.59	
Feb'y ..	19,260.53	7,214.53	12,046.00	
March .	23,892.54	9,603.58	14,288.96	
				$32,079.55
1860.				
Jan'y ..	18,439.16	7,830 04	10,609.12	
Feb'y ..	25,469.24	9,012.87	16,456.37	
March .	30,987.08	10,380.08	20,557,00	
				47,622.49
Increase of net earnings				$15,542.94

—or nearly 48½ per cent.

Houston and New Orleans Railroad.

The Crockett *Printer* says that "this road will reach Liberty in about two weeks from the Louisiana end. Last week it had reached Sour Lake, only eighteen miles from Liberty, and it is progressing at the rate of one mile per day. The grading from the Trinity towards Sour Lake was also progressing very fast; some say it will be completed to Houston in eighteen months at the farthest."

Railroad Earnings.

The net receipts of the Harlem Railroad Company for the month of March are as follows:

1859	$88,278 26
1860	88,598 48
Increase	$320 22

The above increase would have been much larger, had not the Hudson River opened some ten days earlier, this year than last.

The net receipts for the six months ending March 31, are as follows:

1858 and 1859	$525,079 15
1859 and 1860	559,476 63
Increase	$34,397 48

The receipts of the Grand Trunk Railway of Canada, for the week ending March 24, 1860, were | $71,417 34
Corresponding week, 1859 | 51,664 54
Increase | $19,752 80
Total traffic from July 1, 1859 | $2,052,288 92
Do. for same period last y.. | 1,661,985 20
Increase | $390,303 72

The traffic of the Great Western Railway of Canada for the week ending April 6, 1860, was as follows:

Passengers	$21,765 44
Freight and live stock	29,137 16
Mails and sundries	1,336 25
Total	$52,238 05
Corresponding week last year	40,868 14
Increase	$11,370 81

The London papers state that the Directors of this Company had announced a dividend at the rate of 2 per cent. per annum on the capital stock out of the profits of the half-year ending January 31, which will leave a surplus balance to be carried to the credit of the current half-year of £9,617 11s. 11d.

The statement of the Illinois Central Railroad Company for March, 1860, is as follows:

Land Department.

Acres Construction Lands sold	1,879.12	for	$28,015 54
Acres Interest Fund L'ds sold	119.50	"	1,440 34
Acres Free Lands sold ..	275.35	"	4,691 26
Total sales during the month	2,273.97	for	$34,147 14
To which add Town Lot sales			320 65
Total of all			$34,467 79
Acres land sold since Jan'y 1, 1860	6,277.61	for	$98,919 57
Acres sold prev'sly	1,237,260.55	"	15,735,837 02
Total	1,243,538.16	for	15,834,756 59
Construction Bonds canceled in March, 1860			$24,500 00
Construction Bonds canceled previously			1,367,000 00
			$1,891,500 00
Free Land Bonds canceled in March, 1860			$4,000 00
Free Land Bonds canceled previously			187,000 00
			191,000 00
Total Bonds canceled up to March 31, 1860			$1,582,500 00
Total receipts in March, 1860			$40,701 57
Total cash and bonds received to March 31, 1860			$3,429,867 46

Traffic Department.

Receipts from passengers		$75,443 56
Do.	freight	121,437 65
Do.	mails	6,358 28
Do.	rent of road	5,425 00
Do.	other sources	4,415 22
Total receipts in March, 1860		$218,079 76
Do.	do. 1859	152,172 69
Total receipts since Jan. 31, 1860		$586,548 05
Do.	correspond'g period,'59	417,880 64

Original land grant, 2,595,000 acres; railway, 706 miles of main track, and 91 miles of sidings; 113 engines; 2,456 cars; funded debt, $18,418,500.

	1856.	1857.
Traffic	$2,434,878 59	$2,293,964 57
Working expenses .	1,444,546 19	1,791,231 14
Balance	$990,332 40	$502,733 43
	1858.	1859.
Traffic	$1,976,578 52	$2,114,448 98
Working expenses .	1,419,954 80	1,489,579 52
Balance	$556,623 72	$624,869 46

The receipts of the Catawissa Railroad for January and February, were:

Earnings, February, 1860	$23,474 37
Due connecting roads	4,849 59
Total	$18,624 78
Earnings, January, 1860	$23,021 42
Due connecting roads	4,594 30
Balance	$18,427 12

There is a considerable increase in favor of this year. The road is said to be doing a larger freight business than ever before.

The March earnings of the Dayton and Cincinnati Railroad were:

Local freights	$14,243 77
Through freights	6,647 14
Passengers	10,173 42
Mails and express	1,700 00
Total	$32,769 28

The earnings of the Michigan Southern Railroad in March were as follows:

	1859.	1860.
From Passengers	$71,903 36	$60,629 68
" Freight	61,235 39	100,462 08
" Mails	4,583 41	4,655 21
" Miscellaneous	5,903 29	7,786 92
Totals	$143,625 45	$173,533 89
Increase		$29,908 44

The March return in detail of the Michigan Central Railroad is as follows:

	1860.	1859.
Passengers	$64,855 94	$77,837 87
Freight	90,649 78	68,715 50
Miscellaneous	5,309 81	5,311 29
Total	$160,311 53	$151,864 66

Gain over 1859, $8,446 87.

The earnings of the Little Miami and Columbus and Xenia Railroad for March, 1859 and 1860, were as follows:

1859	$108,840 43
1860	103,595 75
Decrease	$5,244 68

The earnings of the Macon and Western Railroad Company in March, 1860, were:

From Passengers	$9,322 79
" Freight	29,989 41
" Mail	866 45
Total	$40,178 65
March, 1859	$34,490 81
March, 1858	26,191 39

Journal of Railroad Law.

DAMAGES SUSTAINED BY THE CONSTRUCTION OF RAILROADS OVER MINING LANDS; HOW ESTIMATED.

The case of Searle *vs.* The Lackawanna and Bloomsburg Railroad Company, recently decided in the Supreme Court of Pennsylvania, presents some novel features. It was brought by the plaintiff, to recover the value of certain land belonging to him, and taken by the defendants for the purposes of their railroad. The land in question, consisting of 91 acres and 111 perches, was located on the feeder of the North Branch Canal, in the township of Pittston, Lucerne County, and aside from its value, as farming land, was alleged by the plaintiff to contain valuable coal mines beneath its surface, although none of it was then being worked. The gist of the controversy was as to whether the plaintiff should be allowed to recover the value of the coal lying beneath the track of the railroad. As usual in such cases viewers were appointed, but the plaintiff not being satisfied with their decision appealed to the Court of Common Pleas of Lucerne County. Here he offered to prove, as one of the items of damage, that the tract in question was coal land, and that the defendants' railroad crossed it in such a place and manner as to materially increase the expense of mining his coal; and that at least one acre and 149 perches of coal, of the value of $4,000, or thereabouts, underlying the track of the railroad, could not be removed, without destroying the support of the railroad, and was consequently wholly lost to him.

The Court rejected the evidence, and upon the point involved in the refusal to admit the evidence, charged the jury as follows:

A claim has been advanced here for alleged injury and difficulty, arising out of what may be called estimated mining rights and privileges. The court, heretofore, rejected evidence of this kind, when offered as a distinct ground for claiming damages, to be compensated in money to the plaintiff. The court then said that Mr. Searle, having no mining works in operation, no coal mine opened for mining purposes on his land, but his coal all being covered up by the superlying soil, and known to be there only by the judgment and examination of experts, was not so injured by the making of the road herein, that his injury could be considered capable of ascertainment now, and could be recovered here. The Supreme Court have said that remote, contingent, and speculative damages cannot here be claimed; and we repeat, while some evidence upon this subject came out in the explanations given by the witnesses of the grounds of their opinion as to the amount of injury to the property, and of the same character as that which the court rejected in chief, that these alleged difficulties and sources of injury, to a mere estimated mining right, which may hereafter, or which may not ever be carried on, are not to be considered by you, in making up your estimate of any sum which you may think the plaintiff entitled to recovered.

A verdict and judgment having been rendered in favor of the plaintiff for $300, he again appealed the case to the Supreme Court, asking for a new trial on the ground that the judge improperly rejected the evidence offered, and erred in his charge to the jury. We give the opinion of the court affirming the judgment of the Common Pleas:

LOWRIE, C. J.—The claim is for damages, for taking part of the plaintiffs' land in making the defendant's road; and by the principles of the judge's charge, the jury were allowed to find a verdict for the value of the land taken, and for all the actual damages arising from the manner in which the road went through the plaintiff's land, and affected his improvements; and to measure even imaginary and contingent damages against the probable advantages or facilities that the improvement might occasion. We cannot say that we discover any error in all this.

But the court rejected evidence that there was over an acre of coal under the road, worth $4,000, which would be lost to the plaintiff, because necessary to be left for the support of the road. Now if such a fact were necessary to the ascertainment of the value of the land taken, it would be wise to accept the testimony of experts, for we ought always to seek the best sources of information. The objection is not to the experts, but to the facts themselves. We do not measure the value of land by such facts. Land may have $4,000 worth of coal per acre in it, and yet sell for $40 per acre. When a man has to sell his property, of course he must take the market value for it. That is measured by the custom or common dealing of the country. If it is land, the market value is measured by the price usually given for such land in that neighborhood, making due allowance for differences of position, soil, and improvement. Value may be very approximately estimated in that way, for it is not then founded upon the mere opinion of witnesses, but on the fact of a general market value. When the State takes private property for public uses, or authorizes it to be taken, this market value is all that it pays for it. This is the necessary measure, in order to avoid the favoritism or oppression that would attend any other measure. Every man holds his property subject to this eminent domain, dominion, or ownership, of the whole society. He must give it up when society needs it, on being paid its value according to the estimate put on it in the market, that is, by common consent. On the subject of taking land for public uses, the French have a very carefully prepared system in their law of 8th March, 1810, *sur les expropriations pour cause d'utilite publique*; and it directs the market value to be ascertained by reference to recent actual sales in the neighborhood, by the tax lists, and other documents, with the aid, if necessary, of experts, or persons whose business it is to deal in such values.

In the present case the jury were permitted to find in favor of the plaintiff the full value of the land, as coal land; though the defendants' get no title to the coal, further than it is needed to support the surface. Then the plaintiff has been allowed the full value of the land, as estimated by the common standard; and we do not see how we can take any other. The one here proposed has never been publicly sanctioned, and that is something against it. It would require us to ascertain the possible value of the products of the land, in order to get at the value of the land itself. But the products do not exist, and therefore have no value, for value here means value in money in the market, and this cannot apply to products not yet in existence. And then to use the products as a standard of value of the land, is to apply an uncertain measure in order to obtain a certain result. It is easier to value the land directly, than thus.

Moreover, the offer impliedly requires a degree of refinement in the measure of values, which seems to us totally incompatible with the gross estimates of common life. Though we might have the most accurate calculation of the quantity of coal in the land, yet, without knowing exactly the expense of bringing it to the surface, and carrying it to market, and the amount likely to be lost in mining and conveying, and the times in which it would be brought out, and the market prices at those times, the quantity would not help us to value the land. The gross estimates of common life are all that courts and juries have skill enough to use, as a measure of value. All other measures are necessarily arbitrary and fanciful. There was another offer to show that the railroad of the defendants crosses the land in such place and manner as to materially increase the expense of mining the coal in the land. We understood from the opinion of the court below, that this means that, if at any future time the plaintiff shall undertake to mine the coal in his land, he will be put to great expense in getting it across the road for transportation to market; and for this he wants compensation. There is no special allowance in the act of assembly for supposed injuries of this kind; and if the common law does not recognize them as injuries, we do not see how it is possible for the court to allow compensation on account of them. To ascertain the common law, let us see what is the usual mode of proceeding in such cases.

The State allows, for all actual damages to existing improvements, especially in case of railroads; and that has been done here. But, so far as regards the unopened coal veins on this land, we may treat the case as one of wild lands. Over

such, the State makes its roads, with simple reference to public convenience. It allows no damages on account of the fact that, when the owner comes to improve, he must go to great expense in adapting his improvements and the roads to the public good. It counts not at all on the minerals under the road; to do so, would obstruct all improvement on such land; and yet mineral lands must have roads, as well as other lands, and on similar terms. It cuts through high ground and fills up low, without allowing for the difficulty which the owner may some day have in getting at or over the road. It usually does the same, even through improved lands; though it does not always permit railroad companies to do so.

In relation to wild lands, such operations are no present injury, except in a purely imaginary sense. They may some day prove an obstruction; and it is impossible to tell what changes of roads and other avenues of communication, and what changes in the value of land and of its products, may take place before the day arrives; and it is impossible to decide now what the injury would then be, or that it would be any. It may be, that before the coal begins to be mined, the surface will be occupied by improvements needing this road, and presenting themselves greater obstructions to mining than the road is, because the mining must regard their safety. We cannot say that we discover any error in the case. Judgment affirmed.

Charleston and Savannah Railroad.

BRIDGE OVER THE SAVANNAH RIVER.

We find in the Savannah *Republican*, of 24th ult., an account of an excursion made a few days previously to the site of this structure. The party was composed chiefly of the leading merchants of Savannah, convened by invitation of W. L. Drayton, Esq., the President of the company. Little more than an hour was consumed in reaching the point of destination, which is some 16 miles by water from Savannah. The day was spent in examining the operations of the company in the immediate neighborhood of the bridge. The *Republican* says:

The rapid progress of the road during the last few months, was a subject of general remark. All were surprised to find it in such a state of forwardness, and when the iron horse came puffing across the rice fields on the Carolina side and hauled up at the very bank of the river, it really looked as if our long-cherished hopes of a connection with Charleston had become suddenly realized. It was not quite so, however. The trestle work through the river bottom, on both sides, is complete, that on the left bank being within a fraction of 2½ miles in length, and of great height, and on the right bank 1½ miles. The iron is laid on the former out to the highlands, and the work is being rapidly pushed forward by a heavy force. The grading of the entire road from the Savannah to the Ashley—a distance of 29 miles—is about complete, and the cars are now running daily to Coosawattie. The track is laid some distance this side of the last mentioned point, and an immense force is now engaged in laying down the superstructure on the intervening gap between there and the river. So anxious are the Board to meet their pledges to the public, that with a liberality deserving all praise, they have offered a bonus of $12,000 to the contractors, conditioned upon the completion of the entire line to the Savannah river, and its delivery in running order, by the 20th of April. This will no doubt be done; the connection with Savannah being formed by a steamer, which has already been contracted for, and is ready to be placed on the line. So far as we observed, every portion of the road is built in the most substantial manner, and adapted to the heaviest freighting business, besides affording perfect security to travelers.

The bridge, which was the chief object of attraction, is being constructed under the supervision of Capt. W. S. SMITH, as Civil Engineer to the *Trenton Locomotive and Machine Manufacturing Co.*, the contractors for the iron piers; and of M. P. MULLER, Esq., C. E., on behalf of the Railroad Company. The following description of it is given by the *Republican*:

The bridge across the Savannah is to be a grand structure, unequaled, perhaps, by any similar work in the Southern States. The span is between 900 and 1,000 feet, and instead of the usual wooden or stone piers, it will rest on hollow iron cylinders, which penetrate the bed of the river and rest upon a solid clay foundation. These cylinders are in sections two inches thick, six feet in diameter, nine feet in length, and weighing each, 12,500 lbs. They are united to each other by means of flanges on the inner side, secured by bolts, a circle of India Rubber being placed between so as to render them air-tight. These sections are placed one on top of another until the desired length is obtained, and arranged in pairs across the river, about one hundred feet apart. It were impossible to get a firmer or more permanent basis for the superstructure.

The manner of sinking these cylinders into the earth affords a beautiful illustration of the triumph of scientific principles when applied to the practical, utilitarian affairs of life. Instead of being driven, as ordinary piles, they are sunk to the required depth, through the solid bed of the river, in instances to the depth of thirty-five feet, by the simple application of *atmospheric pressure*. Two or more of the sections, as may be necessary, according to the depth of water, are bolted together and set upright in the river, both ends being open and the lower one resting upon the bed. Over the upper, which reaches above the surface of the water, is then placed a cap, of the same diameter and fitting air-tight upon it, the top of course being closed. The whole process of sinking is then accomplished by exhausting the air in the submerged cylinder, which being done, the pressure of the atmosphere upon the top of the cap sinks the whole mass to the required depth, the cylinder making its way downwards through all obstacles, and without any other application of force whatsoever. The exhaustion is effected by means of India Rubber connected, one end with the cap and the other with two large cast iron receivers, 30 feet in length by 6 in diameter, on board a flat which is moored at the spot and contains all the machinery, including a steam engine, derick for keeping the cylinders in position, &c., &c. The engine puts in motion an air-pump which first exhausts the two receivers. The valves of these being then opened, the air in the cylinder to be sunk rushes through the India Rubber tubes to fill up the vacuum, and the iron pier gradually sinks into the earth from the pressure of atmosphere above, as before stated. Nothing can exceed the simply beauty of this operation, which to the unscientific mind, has the appearance of magic or legerdemain.

The water and sand are removed from the cylinders by means of pumps, &c.; and when all are sunk, they will be thoroughly cleaned out and filled with concrete—thus forming a solid column from bottom to top.

It is estimated that it will require a twelvemonth to complete the bridge and have it ready for the passage of the cars.

J. MURRAY, JR.,
ARCHITECT & BUILDER,
No. 3 CEDAR STREET,
(Near Pearl), NEW YORK.
STORES AND OFFICES FITTED UP.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

The holders of the Bonds of this Company, due July 1, 1860, can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.

A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.

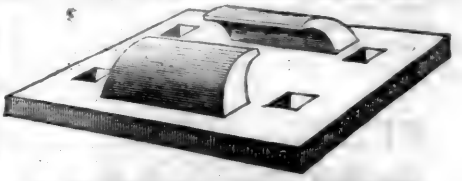
2m15 W. H. McILHENNY, Secretary.

PHŒNIX IRON COMPANY'S

SUPERIOR WROUGHT IRON
RAILWAY CHAIRS,
With continuous lips, made to fit exactly the flanges of the rail
SAML. J. REEVES, V. Pres't,
410 Walnut st., Philadelphia.

To Railroad Contractors.

SEALED PROPOSALS for the Graduation, Bridging, Ballasting and Track-laying of sixteen miles of the Junction and Breakwater Railroad from Milford to Georgetown, will be received by the undersigned until Tuesday, the 1st day of May next, upon which day the proposals will be opened and the lettings declared.



All necessary information can be obtained at the Engineer's Office in this place.

MILFORD, Delaware, April 2nd, 1860.

JOHN W. HOUSTON,
President of the Company.

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans. Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
163 West 28th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

(Formerly W. HULL & SON,)

Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,

For Railroads, Machine Shops, Steamships, Mills, etc.

THIS OIL having been before the public for a **long time**, and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval**, renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme .t of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Victoria Bridge.

(Continued from p. 308.)

It is a seriously mooted question whether the reliance which is placed upon the *whole width* of the tops and bottoms of these tubes as effective to resist their strains is not a great mistake; and I am not alone in the opinion that a large portion in the centre is of no sort of service, except as lateral supports to the sides; or in other words, that the top and bottom would fail at the edges before the centre would begin to render the services for which it was designed.

If, however, we consider the whole width of the top and bottom of the tubes as effective for compression and tension, some allowance should be made for the lateral bracing necessary in the open girder. From Mr. Barton's description of the Boyne viaduct, 264 feet span and 24 feet wide, it appears that the top cross beam over-head weighs 6.8 tons, and that the lateral bracing in top and bottom weigh 10.9 tons, making a total of 17.7 tons. Reducing these to the width of the Victoria tube, and the weight would be 11.8 tons. Again reducing the length of bridge to 242 feet, and the weight would be only 10.8 tons, so that even in this view of the case the top and bottom of the tubes would weigh 59.2 tons more than the open girders.

Mr. Stephenson in further attempting to demonstrate the superiority of the tubes over framed girders, as regards the quantity of material required for a given length and depth, and designed to sustain the same load, says: "For a further example let me compare the Boyne Trellis Bridge (held by some to be the most economical) with the Victoria tube. The Boyne bridge has three spans; the centre one being 264 feet and the height is 22½ feet. It is constructed for a double line of way, and is 24 feet wide. The total load, including the beam itself, the rolling load at two tons per foot, and platform rails, &c., amounts to 980 tons, uniformly distributed. The bridge is constructed on the principle of 'continuous' beams, a term which signifies that it is not allowed to take the deflection due to its span, but being tied over the piers to the other girders, the effective central span is shortened to 174 feet; in fact this principle changes the three spans into five spans. Now the *effective area* given for compression in this centre span is 113½ *inches*, which gives a strain for the 174 feet span of nearly six tons to the inch in compression."

In reply to this statement, Mr. James Barton, in the Civil Engineer and Architects Journal of March, 1856, publishes the following correction. He says: "In this last sentence is a statement that the effective area of the top of the Boyne viaduct is 113½ *inches*, whereas the *fact* is it is 227, or 113½ inches in *each* of the beams; and the strain, where the span is 174 feet, is, *instead* of 6 tons per square inch, 2.8 tons per square inch. The drawings I furnished to the Institute with my paper gives Mr. Stephenson the areas of *each* bearer."

Mr. Stephenson starting with premises so erroneous, proceeds with his demonstration:

"The Victoria tubes are known to be 275 tons in weight, 242 feet in span, and of 19 feet average depth—the strain not being more than four tons per inch for compression, with a uniform load of 514 tons, which includes its own weight, sleepers and rails, and a rolling load of one ton per foot."

He then proceeds to equate the two, by first supposing the span of the Boyne bridge to be *not* continuous, but to be considered as an independent structure of 264 feet span, and then calculates that to sustain its own weight and a rolling load of two tons per foot, with a compression of four tons per square inch in the top at centre, the area of the chords should be 364 inches; and with his *erroneous basis* of 113½ inches, as their *actual* area, (the weight of the bridge as constructed being 386 tons,) he says it would weigh "little short of 600 tons." He then supposes the Victoria bridge to be constructed for a double line of way, 24 feet wide, and 22½ feet deep, "doubling the sides," and says "the whole weight would be very little more than 500 tons for 242 feet span;" thus leaving it to be inferred that there was an advantage of 100 tons in favor of the Victoria tubes. It is not at all a difficult matter to expose the fallacy of this comparison.

Assuming that the Boyne bridge considered as a single span of 264 feet, required 364 inches of area in the top chords for compression, this area would be only at the centre, and would decrease each way towards the ends. The area at these points is more dependant upon the mechanical connection of the different parts, than upon the strains; for the compression at the ends is theoretically nothing, but practically Mr. Barton allows 100 square inches. The areas for the intermediate space would increase as the rectangle of the segments. Now in the bridge as constructed, the actual area, as given by Mr. Barton, at the centre "is 227 inches. It comes down to 137 inches, near the ordinary points of inflection, and increases to the ends where it is 265.2 inches." This disposition of the material is made in consequence of the beam being continuous, that is, connected over the piers to the adjacent spans, thereby producing a tensile strain over the piers, where in a single span the strain is nothing. The amount of material in the chords would therefore be about 10 per cent. more in the 264 feet span than in the continuous beam. The sides would be no more; the lateral bracing, the floor beams and end pillars, the same. The weight of the bridge, as constructed, is as follows:

Top chords	105.5 Tons.
Bottom "	109.1 "
Sides	82.8 "
Cross beam, over-head	6.8 "
Floor beam	46.1 "
Horizontal bracing, top and bottoms	10.9 "
Pillars, over-piers, &c.	24.8 "
Total	386.0 Tons.

Increasing the chords 10 per cent. in order to allow for the span being single, and the weight of the bridge would be 407½ tons, instead of 600.

Now let us make the Victoria bridge 24 feet wide, "with the *sides doubled*," and *we double its weight*; that is, we make it 550 tons, instead of 275. Then let us increase its span from 242 to 264 feet, and we increase its weight between the bearings, as the squares of the spans, bringing it up to 574 tons, to which add the bearings, and we have a total of 640 tons, against 407½ tons in the Boyne bridge, *both being brought to a common standard*.

Mr. Barton, after correcting the error into which Mr. Stephenson started, as to the area of the chords at the centre, reduces the two to a common standard, with the result of 386 tons for the Boyne bridge, and 595 for the Victoria tubes, but in doing this he adopts Mr. Stephenson's statement, that the tube increased to 24 feet in width for a double track, and with "its sides doubled," would weigh but 500 tons. This weight for 242 feet span would give 595 tons for 264 feet span. It is quite evident, however, that if the bridge be increased in width so as to carry double the load, its sides being "doubled," the top and bottom must also be doubled, even though the width, instead of being doubled, is only increased to 24 feet; for no matter whether the width be 24 or 32 feet, about the same amount of effective material would be required to sustain the same load.

Mr. Barton says in regard to the comparison he makes: "Nor does even this comparison fully show the advantage on the side of the lattice; for the weights of such bridges will increase in a ratio above the square of the span;" so that, if instead of equating the two bridges by *bringing the tube up* to the standard of the lattice, the *lattice had been brought down* to the standard of the tube, a still greater difference would have been shown in their weights. Upon a reference to the weights given for the different parts of the Victoria tubes and the Boyne bridge, it will be noticed that the sides of the former weigh 84 tons for a single span of 242 feet with a single track only, the maximum load being 2.1 tons per foot; while the sides of the latter weigh 82.8 tons for a span of 264 feet, the maximum load being 3.7 tons per foot. If we take the sides alone, admitting, for the sake of the argument, that the question, as stated by Mr. Stephenson, is really narrowed down to *them*, we shall find that it is a matter of some importance. Doubling the sides of the Victoria tube to carry a double track, and increasing the spans to 264 feet, their weight would not be less than 180 tons against 82.8 in the lattice bridge. If such remarkable differences are found to exist, when applied to a double track, with a span of 264 feet, proportional differences will, of course, be found when the comparison is made upon a common standard of 242 feet span with a single track. The same general proportions will be found in comparing the tubes, with the Warren girder, and it is unnecessary to multiply figures to demonstrate them. So far, then, as gross weight is concerned, there can be no sort of doubt, as to the immense superiority of the framed girders.

Mr. Stephenson was singularly unfortunate in his premises, and (inadvertently of course) making an error of 50 per cent. in his first figures, it is not surprising that the conclusions should be equally erroneous.

That plan of construction which requires the least weight of material for a given strength, irrespective of the cost per ton, is most economical in another important respect, viz: *less of its own strength would be absorbed in supporting its own weight*. The comparison I have made of the Victoria tube with the Boyne bridge, shows that the same strength might have been obtained with two-thirds the material used, thereby lessening the load 80 tons. The working load could thus be increased 25 per cent., the factor of safety remaining the same—or with the same working load, viz: one ton per foot, the factor of safety 3.7, which every engineer will concede is none too high, would have been increased to 4.4.

I have not before referred to one particular advantage claimed for the tubular system, which is that the sides in themselves have an *inherent strength*, whereas the sides of the trellis girders would collapse of their own weight if disconnected from the top and bottom. Upon the standard of the Boyne bridge the sides of the tubes would have 100 tons more material in them, than that structure has. Now if *this excess of material, spread out in a thin sheet, standing on its edge, will sustain more load than it would, properly distributed, in the top and bottom chord, and in the braces of a trellis bridge*, there might be an advantage claimed; but as this proposition is so contrary to all the well known laws that govern the disposition and arrangement of materials in a girder to obtain the greatest strength with the least amount of material, that it requires no abstruse calculations to demonstrate its absurdity. Mr. Liddell in his reply to Mr. Stephenson, says in regard to this claim: "It may, however, be fairly reproached to the plate sides, that not only would *they* collapse, if disconnected from the top and bottom, but that if it were not for the vertical columns and stiffeners, *they would collapse under the action of the top and bottom, without being disconnected from them at all*." And Mr. Barton says—"Did it not strike Mr. Stephenson that the same argument would prove that there *was no strength in the top and bottom*. What would become of these if disconnected from the sides? Would they not 'collapse?' And the argument from this, (similar to Mr. Stephenson's,) would be, therefore, that the top and bottom do not add any strength, or anything, but *strain* to the *sides*."

I give the following extract from Mr. Clarke's work on the Britannia tubes in order to show how much superfluous material is used in the sides in order to render them *efficient at all*:

"The material in the *sides* of one large tube is distributed in the following manner:

40	per cent.	in the plates acting as sides.
19	"	" " covers.
27	"	pillars and stiffeners.
7	"	knees and gussits.
7	"	rivet heads.
100."		

From this it will be observed that 60 per cent of the whole weight in the sides is required to connect together the remaining 40, and enable it to do its duty. The aid given by the sides in sustaining the load is, therefore, rather expensive, and it may be concluded that if the 40 per cent. contains material enough to make the fraces of a lattice, the surplus 60 per cent. could be more profitably used.

That no difficulty is experienced in fulfilling the dimensions of the different parts of the trellis girders for such spans, is proved by the construction of the Boyne viaduct, having a span 22 *feet greater than the Victoria tube*.

In comparing tubes with the *Warren girder*, Mr. Clarke in his report admits that when the span is small and the depth considerable, the strain on the sides of the former, only calls for plates of such extreme thinness, that as a question of durability, altogether apart from strength, it is *necessary* to use a much thicker plate than theory calls for; and a *waste of material* to that extent undoubtedly takes place. And he considers that here the Warren girder has the advantage, as the material being in bars instead of plates, no such surplus is required; nor are bars of iron of such dimensions so liable to suffer from oxidation as thin plates with so large a surface exposed; but he considers that this advantage is only in the sides, adhering to the statement made by Mr. Stephenson, that the area of the top and bottom must be the same to give the same strength; but when the span is large, as at the Victoria bridge, he considers that the practical difficulties in substituting Warren girders, would consist in uniting the various parts, from their becoming so "ponderous," and that the amount of "superabundant material" required for lateral stability would give the tube an important advantage, while the requisite strength of the sides of a tube of such span, no longer render necessary any waste of materials. In the shorter span he says the Warren girders have another advantage, viz: that they can be put together without *skilled labor*, and on this ground he has frequently seconded their adoption. But he speaks of a danger from trains running off the tracks and through their sides, which does not exist in the case of tubes.

The inference from this is that the materials in the Warren girder can be put together for a less cost of labor; and as bars of iron are cheaper than boiler plate, unless the different parts of a Warren girder, for a span of 242 feet, are too large to be readily procured, or handled, or "connected," the Warren girder would cost less. We have in this country a few small girders constructed on the Warren principle, both in wood and iron, none, however, large enough to adopt as examples in this comparison; but in reply to this statement of Mr. Clarke's, Mr. Liddell gives figures deduced from examples in England. He says: "Now, what are the facts in regard to these ponderous columns, &c. For Warren girders of spans of 242 and 330 feet, the heaviest length of the compression flange between supports, would weight about

	2½	Tons.	4½	Tons.
Do. Tension bars	1	"	1	"
The heaviest struts	1	"	2	"
Do. Ties	0.9	"	1¾	"

—and in the whole girder of which I have had designs made, as *in all other* girders of a similar

kind, the forged work is not two per cent. of the whole. The bars are all of a much *thicker* and *cheaper* and *stronger* form of iron, than the plate required for a tubular bridge; and the superabundant material required to ensure "lateral strength" is not only *not* more in proportion to the whole weight, than in smaller girders, but the proportion actually diminishes as the length of the girders increase. As regards danger in passing between the girders of Warren's, or *any other kind of diagonal bracing*, I need hardly, I think, say one word. It is unquestionably a thing so easy to be provided against that the merest tyro should be ashamed to make the objection."

Mr. Clarke instances the Newark Dyke bridge as a Warren girder of similar span to the Victoria bridge, but weighing considerable more. The dimensions and weight of the two compare as follows:

	Span.	Depth.	Width.	Weight, including track.
Victoria Tube	242 ft.	20 ft.	16 ft.	305 tons.
Newark Dyke	240 6 in.	16 "	13 "	292 "

To make a fair comparison, the two bridges must be brought to a common standard of width, height and span, and their relative strengths compared.

The Victoria tube reduced to 13 feet in width, would weigh the same; for it must have about the same material in top and bottom. Its length reduced from 242 to 240½ feet, would reduce its weight in proportion to the squares of the lengths, viz: to 302 tons. Decreasing its height from 20 to 16 feet, would increase the material in top and bottom, inversely as the depth, giving them 197 tons instead of 158. Its sides would decrease in weight about 20 tons, making the bridge 321 tons against 292 in the Newark Dyke bridge. This, it is true, is but a difference of 29 tons, but there is included in the weight of the Newark Dyke bridge a platform of 50 tons weight, which is represented as being 25 tons more than necessary. Deducting this, and the comparison would stand: Victoria tube, 321 tons; Newark Dyke, 267 tons. Now what is the relative strength of the two bridges? Mr. Stephenson represents the strain on the Victoria bridge with a load of one ton to the foot, in addition to its own weight, to be four tons per square inch compression in the top, and five tons tension on the bottom. The ultimate strength of top being taken at 14.8 tons as its resistance to "buckling," the factor of safety is 3.7. The ultimate resistance of the bottom to tension, according to the results of the Britannia bridge experiments, being 18.6 tons, we have the factor of safety, viz: 3.7. The dimensions of the Newark Dyke bridge, as given by Mr. Chas. Wild, who made the working drawings, give us the factors of safety in that structure, with a working load of one ton to the foot, 9 for the top and 5 for the bottom—so that the top has more than twice the material in it necessary to give the same strength as in the top of the Victoria bridge, and the bottom has about 34 per cent. more. Making the deductions from top and bottom, so as to make the factors of safety the same as in the Victoria bridge, and the weight of the Newark Dyke bridge would be not more than 220 tons. The cost of this bridge is stated to be under £20 per ton, including staging and expense of testing; but adding for difference of cost between Canada and England, the relative cost of a single span of same length (242 feet) would be (deducting tracks):

Newark Dyke Bridge, 195 tons, £25 ..... £4,876
Victoria Tube Bridge, 291 tons, £54 15,714

Difference in one span £10,839

The difference in the cost on the 24 spans would be about £260,000, or $1,300,000, in favor of the Warren girders.

(To be continued.)

County Bonds in Iowa--Their Validity Established.

We give below a decision of Judge Love of the United States District Court for the State of Iowa, upon the question of the validity of bonds issued by counties in this State in aid of railroad companies. As the decision is preceded by an elaborate discussion of the question, and cites the various decisions of the courts of the State upon this matter, we give the decision of Judge Love entire.

Robert Moir, vs. The County of Jefferson. } In the District Court of the United States for Iowa.

OPINION OF THE COURT.

This is an action upon several coupons to certain bonds issued by the county of Jefferson to the Burlington and Missouri Railroad Company, and assigned to the present plaintiff. Defendant demurs to the petition, on the ground that there existed, by law, no authority in the counties to issue the bonds or coupons on which the suit is founded.

Section 114, of the Code, provides that "the County Judge may submit to the people of his county at any regular election, or a special election called for that purpose, the question whether the county will construct, or aid to construct, any road or bridge which may call for an extraordinary expenditure," etc. And the question in this case is, whether this section was intended by the Legislature to include railroads, or only the ordinary county roads. If this provision applies to railroads as well as ordinary county roads, then the county of Jefferson was authorized to issue the bonds and coupons involved in this suit.

It is well settled by the decision of the Supreme Court of the United States that the Federal Courts will follow the Supreme Courts of the several States in the construction of their own constitutions and laws.

If it were otherwise, we should have in effect in the same State, the mischievous anomaly of two different constitutions, and two different laws by judicial construction, and the Federal Courts would have the power to set up in any State a local and internal policy at war with the settled policy of the State, founded upon its judicial decisions. A man might gain or lose his title by changing his residence, and, consequently, the forum in which to prosecute or defend his rights. To avoid the intolerable inconvenience which would result from such a conflict of laws the Supreme Court of the United States have established the rule to which I have just referred.

It is, therefore, my duty to ascertain, if possible, what construction the Supreme Court of Iowa have put upon the section in question, and to follow that interpretation.

This question was first decided by the Supreme Court of Iowa at the June term, 1853, in the case of Dubuque County *vs.* the Dubuque and Pacific Railroad. There is no doubt that the case was well considered—the question was directly before the Court, and the judges were evidently fully aware of the importance of the precedent they were about to establish. The Court held that Section 114 of the Code, is applicable to railroads, and that the county of Dubuque was authorized to issue its bonds in pursuance of the provisions of the Code to aid in the construction of the Dubuque and Pacific Railroad. This case was decided before the bonds were issued, upon an appeal taken from the decision of the County Judge ordering the vote.

The question was again before that court (see 4th G. Greene, page 1st, (at the June or December term, 1854, upon a petition praying for a prohibition to the County Judge of Cedar county against the issuing of his warrants to the County Treasury, to pay the interest becoming due on the bonds which had been issued. The Court refused the prayer of the petition, holding that the bonds were authorized by the provisions of the Code. The Court expressly declared that it was their intention to leave the question where the previous decisions had left it." In the previous case of Dubuque County *vs.* Dubuque and Pacific Railroad Company, Judge Kinney dissented, but in the case just cited (State *vs.* Bissell, 4 G. Greene, 333,) the Court was unanimous so far as this question is concerned.

Before the question arose again our Supreme Court, in the case of Clapp *vs.* Cedar County, 5th Clarke, 15, the Judges had been changed. The question was made in that case by demurrer, to a petition to recover the amount due upon certain coupons to the bonds issued by Cedar County. I wish to call particular attention to the very remarkable language of Mr. Justice Woodward, in pronouncing the opinion of the Court.

"That next stage is this—do the counties of this State possess this authority, whether inherently or by express provision? If we were called upon to decide this question now, for the first time for this State, we should certainly entertain heavy doubts of the existence of the power upon any grounds, and if the attempt were made to place it upon Sec. 114 of the Code, under the power to aid in constructing roads, we should think very lightly of the argument. If the power exists, it must have some other foundation.

But this is a subject on which change is disastrous. It is one on which we are bound by former decisions. Such a one has been made, and the public and the world have acted upon it. To change now, *would be the worst of all repudiation, judicial repudiation.* The first decision on a subject of this nature, by the highest judicial tribunal of a State, at a time when the business of the country is moving on, is final—it determines the policy of the State. It is impossible to recede. The world waits and listens for the judicial determination, and then acts accordingly; and in this case has acted with vigor.

This question was determined in the case of Dubuque County *vs.* the Dubuque and Pacific Railroad Company, 4 G. Greene, 1, and in the State *vs.* Bissell, 4 Ib. 328. And five railways have commenced their progress across this State, and several millions of dollars have been subscribed by our counties. Whatever we may think of this as a policy, the Court cannot arrest it consistently, with any regard to the judicial character. The trust must now rest upon the intelligence of the people and their representatives.

Let us next see what the Legislature has done, remembering that we are now in the "early times," when contemporaneous construction arises. By statute of 1854-5, (chapter 128, 1855, 190,) it is enacted that, "Whenever any company shall have received, or may hereafter receive, the bonds of any city or county upon subscription of stock by such city or county, such bonds may bear interest at any rate not exceeding ten per cent.," etc., and the provisions of the act shall apply to any railroad bonds which have been heretofore issued, as well as those which may hereafter be issued. By the same statute (chapter 149, 219,) it is enacted that, in "all cases where county, city, or town corporations have, or may hereafter become stockholders in railroads or other private companies, it shall not be lawful to issue the bonds until, etc.—provided that nothing in this act shall, in any way, affect corporation rights for any contracts or subscription heretofore made with any railroad company or corporation, for the issuing of county corporation bonds."

"Now, when these decisions and this legislation are regarded, does any lawyer expect this Court to overturn all that has been done upon the faith

in them, whatever our present individual opinion may be? We believe not?"

The next case in order is that of King *vs.* Johnson. 6 Iowa, Rep. 266.

This was an action upon the coupons precisely like the one now at the bar. The defendant demurred, and assigned the following among the causes of demurrer: "That the said promises are void upon their face, for the reason that the county had no power or authority, under the laws of the State, to make the same."

Woodward, Justice, in delivering the opinion of the Court, said: "The question whether counties have power, under the laws of this State, to subscribe to the stock of a railway company, and thus to assist in this species of road, has been fully considered in this Court, in the case of Clapp vs. the County of Cedar, 5 Iowa, 15. The question is not argued in this case at the bar, and the counsel do not appear to look for a re-examination of it. Since the decision of the former case the Court has seen no occasion for a change of its views, and the subject will not again be discussed in the present case."

The subject was again before the Court in McMillen *vs.* Boyles, County Judge, 6th Iowa 305.—The question was evidently considered in that case for Chief Justice Wright, in his published opinion in the subsequent case of Young Stokes *vs.* Scott County, says, referring to what was decided in McMillen *vs.* Boyles: "*The power of the County* to take stock is recognized" (in McMillen *vs.* Boyles) by reference to the cases previously adjudicated, and the case turned upon the question of the power of the Legislature to legalize the irregularity in the manner of submitting the proposition." Moreover, Judge Woodward, in giving the opinion of the Court in McMillen *vs.* Boyles, says: "But, inasmuch as that body (the Legislature) *can confer that authority* and *has conferred it*, we conceive that the same body may remedy a defect in the exercise of it."

The question has also been decided by the Supreme Court of Iowa, in the three cases of Garnes *vs.* Robb, Alger *vs.* Robb and Jinkins *vs.* Robb. These cases are not yet reported, but we have in Judge Wright's printed opinion, already referred to, a statement of them as follows:

"In the three cases of Garnes, Alger and Jenkins *vs.* Robb (June Term, 1859) the County Treasurer had levied upon personal property, to satisfy a tax thus voted. The owners brought trespass and replevin, and, among other grounds, urged that the county had no right to levy and collect a tax for this purpose. The question was regarded as settled by the previous cases, and was disposed of by simply referring to them."

In McMillen *vs.* the County Judge and Treasurer of Lee County, 6 Iowa 392, Chief Justice Wright, in giving his opinion, says: "The power of a county to take stock in a company, organized for the purpose of constructing a railroad or other public improvement, though the same has been recognized by a majority of this Court, in the following cases: (citing the cases already referred to.) While I have never concurred in this ruling, and still deny the power, yet it may now, I suppose be regard as settled."

Such is the long and unbroken current of decisions by the highest Court of the State, upon the faith of which the citizens of this and other States have invested millions in these county bonds. Our people have received the consideration of these bonds. In some cases the roads have been actually constructed. This is certainly the case so far as the bonds now in suit are concerned. The people of Jefferson County are in the full enjoyment of the railroad, for the construction of which these bonds were given. Having thus, by the decisions of our highest Court, induced people to lend us their money, and being in the full enjoyment of the consideration, it is proposed that by "the worst of repudiation—judicial repudiation," we should get rid of the payment of these coupons. Surely this would be justly regarded by all the world as nothing less than a judicial fraud—which, next to a pious fraud, is the worst of frauds. Our counties have been, it must be admitted, involved in a great misfortune; for this county indebtedness is a grevious misfortune. It is a very bad thing. It has been all wrong from the first. As an individual, I have ever been opposed to it—I have never in a single instance given a vote to any County loan to railroads. It is now proposed that we add to our misfortune the disgrace of repudiation. But county debt is not the greatest of evils—insolvency itself is a less misfortune than the loss of a character for integrity. The one may be retrived—the other never can! This judicial repudiation now would lead to the utter distraction of all public credit and of all public confidence in the people and government of this State. When and what may we trust, would naturally be asked, since your courts of justice have proved unworthy of confidence?

It is in vain to attempt to get of the odium of this repudiation by a nice criticism upon the reasons which particular judges have from time to time given for their opinions! Still more vain is it to count upon our fingers the number of silent or dissenting judges who have not sanctioned the construction of the code, authorizing the issue of these bonds in order to show that in the aggregate then, a majority of the judges have been opposed to that construction. A majority of the court is the court so far as the validity of their decisions are concerned, and the world justly regards the decisions of that majority as the true evidence of what the law is.

I have looked carefully at the case of Young Stokes *et. al. vs.* Scott County, and I am clearly of the opinion, that it does not overrule any of the previous cases referred to in this opinion. Indeed, it could scarcely have been the intention of the court to overrule these cases, without saying so. Young Stokes *et. al.* was decided at the December Term 1859, and we have seen that as late as the June Term of the same year, the court had affirmed the doctrine established in the previous cases. The case of Young Stokes & Co. *vs.* Scott County was an application for an injunction to restrain the county from issuing the bonds.

In the previous cases, from Clapp *vs.* Cedar County to Jenkins *vs.* Robb, the bonds had been issued and they were in the hands of innocent purchasers. The court therefore in those cases, though entertaining doubt as to the true construction of section 114 of the code, acquiesced in the previous decisions. Judge Wright, himself, expressed his acquiescence in McMillen *vs.* the County Judge and Treasurer of Lee County. But when the case of Young Stokes *et. al. vs.* Scott County arose, under wholly different circumstances and involving none of the evil consequences alluded to by Judge Woodward in Clapp *vs.* Cedar County, Judge Stockton concurred with Judge Wright, in restraining the issue of the bonds. Judge Woodward dissented altogether even in this case—Judges not unfrequently feel constrained to acquiesce in settled decisions even against their clear conviction of what the law is. So it was, I presume, with Judge Stockton in the case of Clapp *vs.* Cedar County and the cases following that decision. But when the question arose involving wholly different circumstances and different consequences, Judge Stockton might, with great propriety, return to his original opinion. Judge Woodward indeed very distinctly intimates in Clapp *vs.* Cedar County that the judgment of the court would have been different but for the mischievous consequences of overruling the previous adjudication.

Hence in Young Stokes and others *vs.* Scott County, we find Judge Stockton declaring in the same breath that the counties of this State, under the provisions of section 114-116 of the code have no power to subscribe to the capital stock of railroads and issue county bonds in payment of the same, and that the State approves of the previous adjudications in Clapp *vs.* Cedar County, and Ring *vs.* Johnson. He says, "in each of these cases, in my opinion, the plaintiff was entitled to recover, &c." I see nothing inconsistent in his position, in view of the ground upon which the court placed their judgment in the first case which arose when he was upon the bench. Nor do I see any reason to suppose he will ever recede from the ground he then occupied in a case involving the same circumstances. Indeed, he declares in express terms that his opinion remains unchanged, that in these cases the plaintiffs were entitled to recover.

It must be admitted by all that it is at least a question of doubt whether the counties are authorized by section 114 of the code to subscribe to the stock of railroads. It would be a very poor compliment to the Supreme Judicial Tribunal of Iowa to say that, without doubt, the counties are not authorized to issue these bonds.

Certainly the action of our Supreme Court will justify us in saying that the authority of the counties is at least doubtful.

Suppose, then, it is a question of doubt in whose favor, under the circumstances of this case, should that doubt be resolved?

Should it be resolved in favor of the county which is in full enjoyment of the railroad, and which still owns the stock; or in favor of the innocent purchaser of the bonds, who has given his money upon the faith of so many judicial decisions? In other words, should it be resolved in favor of that which is manifestly just or that which is manifestly unjust?

But even if the Supreme Court of the State should change front upon this question, this tribunal could not follow them. The Supreme Court of the United States in the case of the Piqua Branch Bank *vs.* Knoop, 16 Howard, 376, held that "In construing the Constitution of a State, this court will adopt a settled construction existing when the contract in question was made, acquiesced in by all branches of the government, and under the authority of which the contract was entered into, and reject a more recent decision by the highest court of the State, as not affording a rule for such a case."

This sound and just principle is, it will be seen, conclusive upon this court, in the case at bar.

The demurrer is therefore overruled.

J. M. Love.

Ventilation of Cars.—Mr. Ruttan.

It is well known that Hon. H. Ruttan, of Cobourg, Canada, has, for many years past devoted himself to the subject of *ventilation*. He has now recently turned his attention to the ventilation of railroad cars, and has lately placed his improvement on the Boston and Lowell, among other roads. It has given such entire satisfaction, that the managers of that road have conveyed their approbation to him in the shape of a gold snuff-box of massive size and exquisite workmanship. It gives us great pleasure to copy herewith the letters of presentation and acknowledgment.

Boston & Lowell and Nashua & Lowell Railroads.
Manager's Office, Boston, March 27, 1860.

Hon. Henry Ruttan: Sir—At a late meeting of the Directors of the Boston and Lowell and Nashua and Lowell Railroad Companies, I was authorized to present to you some suitable testimonial on behalf of these companies, in acknowledgment of the value which they place upon the system of ventilation introduced by you into their passenger cars.

Your experiments, continued now through two winters and the intervening summer, with a number of our best passenger cars, have satisfactorily proved that in summer it is entirely practicable to exclude all dust, and at the same time keep up in the car a full supply of fresh air, and that in winter a railroad car may, without difficulty, be readily and thoroughly warmed and perfectly ventilated at a cost for fuel which at least does not exceed that of any other known method of heating.

Lack of ventilation is now one of the greatest evils in railroad traveling, although little thought of by the mass of travelers, because they do not see the foulness which they momentarily breathe; but the time will probably come when the public will be as unwilling to place themselves in the

hot and poisoned atmosphere of an unventilated car as they are already unwilling to put their children in an unventilated school room.

I have no hesitation in saying that your ventilated cars give very great satisfaction to travelers upon our roads, and we shall put the system to general use in our cars as soon as reasonably practicable.

Permit me now, sir, in evidence of the esteem in which your invention is held by us, to present to you, on behalf of our roads, the accompanying gold snuff box, which has been made with great care from an original design for the express purpose, and which I trust may prove in every way acceptable to you.

With assurances of personal regard,
I am, sir, very respectfully,
Your obedient servant,
GEO. STARK, Manager.

AMERICAN HOUSE, BOSTON, March 27, 1860.

Mr. Chief Manager:—Sir, I thank you for this—I may truly say—magnificent present. To form, however, anything like a true estimate of the extent of my thanks, it would be necessary for you to imbibe somewhat of the enthusiastic feelings always incident to the mind of an investigator of science, and then to follow me through the toil, labor of mind and body, as well as the experiments instituted and unceasingly followed up during the last fifteen years of my life.

This I have done in order to place upon a permanent and incontrovertible footing the true system of a spontaneous or natural ventilation, not of railway carriages only, but of houses and all other apartments whatever in which animal life is to be preserved.

It would be gratifying to me, indeed, here to descant upon the subject of ventilation generally, but a due regard to those conventionalities usually observed upon occasions like the present, forbid such indulgence.

For a man to find himself standing in a city which holds the first rank upon this continent, in all that constitutes a character for intelligence! with the directors of a railroad corporation, second to none in importance in America, and which is under the chief management of a gentleman confessedly at the head of his profession—I say for man, after years of study, anxiety and close investigation, to find himself thus situated and receiving a full recognition of his services by the stamp of such an approbation, seldom falls to the lot of any individual, but especially to a non-professional one like myself.

Under these circumstances, sir, you may imagine better than I can describe, my feelings at this moment. Although for very nearly half a century I have held various offices under the government of the Province, (of which I am an inhabitant, and in which I was born,) and during thirty years of that time, the highest county office in the gift of the Crown; and although I have also held, during a part of that period, the highest office in the gift of the people of that Province, yet I can truly say that the successful issue of this invention has given me more true and abiding satisfaction than all these honors (however highly I value them) put together.

I beg, sir, that you will not here misunderstand me. These feelings have no part of their origin in any mercenary motive. There is no necessity for it; but only and wholly in a desire to benefit my fellow-man, and in an ambition, I must confess it—a laudable one, I hope—of having one day a name connected with a branch of science so important to mankind, and so little understood.

I cannot close these few remarks, called forth by the kind letter which you are authorized to address to me, without an acknowledgment of the deep gratitude which I feel toward those of your directors with whom I have had the pleasure of a personal communication, and especially to you, sir, with whom I have necessarily had a more intimate communication during my short sojourn, for the invariable urbanity and gentlemanly feeling manifested toward me during the short intercourse which we have had together.

I have the honor to be sir,
Your obliged and obedient servant.
H. RUTTAN.

Pittsburg, Fort Wayne and Chicago R. R.

The earnings of this road for the quarter ending March 31st, 1860, compared with the corresponding period of the previous year have been as follows:

	1860.	1859.	Increase.
Jannary..	$139,679 61	$120,541 63	$19,137 98
February.	152,255 11	128,636 04	23,619 07
March...	190,528 30	168,346 75	22,181 55
	$482,463 02	$417,524 42	$64,938 60

Hanover Branch Railroad.

This road is 13 miles in length. It commences at Hanover Junction, a point on the Northern Central Railroad, 46 miles north of Baltimore, and extends westwardly to Hanover. At this point it joins the Gettysburg and the Littlestown railroads—the former running to Gettysburg, a distance of 17 miles, and the latter to Littlestown, 7¼ miles—both of which are operated by the Hanover Branch Railroad Company. The earnings of these roads for the fiscal year ending March 31, 1859, were as follows:

Hanover Branch Railroad		$25,945 48
Gettysburg	"	3,535 80
Littlestown	"	1,950 90
Total earnings		$31,432 18
The expenses were:		
Transportation	$2,951 77	
Motive power	7,847 31	
Repairs of road	3,749 23	
General expenses	926 44	
		15,474 75
Balance		$15,957 43
The receipts from all sources during the year were as follows:		
Earnings, as above		$31,432 18
Sale of iron and materials, stock subscriptions and rent		2,101 66
Material on hand per last report		3,012 86
Balance in treasury " "		1,158 58
		$37,704 78
The disbursements were:		
Working expenses as above,	$15,474 75	
Renewal expenses	4,924 52	
Car house, etc.	647 65	
Rolling stock	3,665 37	
Interest	2,116 50	
Debt, etc.	5,000 00	
Materials purchased	3,933 66	
		35,762 45
Balance in treasury March 31, 1859		$1,942 33

The entire working expenses, including the Gettysburg and Littlestown roads, and the maintenance of road and equipment amounted to $20,399 27. These expenses appear to have been in excess of the previous year. The increase is due mainly to the additional service performed in operating those roads—the receipts from which, at 30 cents per mile run, amounted to $5,486 70—a sum which about compensated the company for its expenditures, including interest on the investment, and depreciation of machinery employed, and leaving a small margin for contingencies. These roads being regarded as valuable auxiliaries, and therefore having claims on the company's liberality, it was not designed that profits should accrue from them; indemnity alone was desired.

BALANCE SHEET.

Assets, viz:		
Road, buildings and fixtures		$172,374 92
Equipment		28,935 37
Real estate		785 39
Bills and outstanding claims		1,900 00
Cash		1,968 14
		$205,963 82
Liabilities, viz:		
Capital stock		$118,000 00
Mortgage bonds		35,000 00
Profits from earnings of road		52,092 92
Bills payable		550 00
Profit and loss		320 90
		$205,963 82

The office of the company is at Hanover, York Co., Pa., A. W. Eichelberger, President.

Memphis Valley and Jackson Railroad.

We learn from the Jackson *Eagle* that $50,000 of private stock in the road is subscribed for by the citizens of Jackson, and that the private subscription is expected to reach $100,000 at least. This is in addition to the $100,000 of stock, which it was determined by vote on the 2d inst., should be subscribed for by the City Council on behalf of the city.

Nashville and Northwestern Railroad.

We published a few weeks since a notice of this road, of which we have been furnished the following correction from an authentic source:

"The Nashville and Northwestern Railroad runs to Hickman, Ky., (on the Mississippi river), and not to Paducah. It is about 170 miles long, and connects at Huntington with the Mississippi Central Railroad, near Paris, with the Memphis and Ohio Railroad, and at Union City with the Mobile and Ohio Railroad. Thirty-six miles of the road are completed at the West end, and track-laying is rapidly progressing from the Mississippi river towards Union City. Ten miles at the Eastern end near Nashville are graded, and track-laying will commence in a few days. The grading has been let on the whole road except 25 miles of light work near Tennessee river. This road will be one of the most important in the State, as it will form the most direct southern connection with the system of roads centering in Nashville."

We learn from the Nashville *American* that the grading of the balance of the road has just been let to responsible parties upon very favorable terms—the whole to be completed within the year. In the meantime track-laying will be proceeded with, and the whole completed shortly after the grading is done. A contract is soon to be closed for the bridge over the Tennessee river. It is to be of iron, and the intention is to make it one of the best in the world. About 1,000 tons of iron have been delivered at Nashville, and 2,000 tons at the other end of the road. Another 1,000 tons is expected shortly, to be followed by 1,000 each month until the whole 16,000 have been delivered. The *American* says:

"The work of track-laying will be commenced here in a few days, and within the present month the Company will draw the bonds for the first section of ten miles, and by the close of the next month will be ready to draw the bonds for the second section.

Under the locating survey the road has been shortened eight miles this side of the Tennessee

river and two miles on the other side. This results in a saving of $100,000 on the estimate submitted to the Governor in December last.

In all contracts for grading, iron and equipments the second mortgage bonds of the Company have been used to the amount of one-fifth to one-fourth at par. So that in the two last items the Company will save nearly two hundred thousand dollars, which will be applied to grading.

Knightstown and Shelbyville Railroad.

An effort was made last summer to resuscitate this project, which succeeded so far as the re-grading of a large portion of the road-bed and the relaying of the road for about five miles from Shelbyville with T rail. The enterprise, the Indianapolis *Journal* states, "is now abandoned, and the iron laid down is to be taken up and used elsewhere. This is a source of regret to the people along the line of the road, inasmuch as it would have afforded them direct outlets for their produce to Cincinnati, Louisville and the Eastern cities, by way of either the Indiana Central, the Indianapolis and Cincinnati, the Madison and Indianapolis, or the Jeffersonville Railroads. The road would have been an aid to the freight business of both the Indiana Central and the Jeffersonville roads, and facilitated the transportation of produce and merchandise from all intermediate points between Madison and Jeffersonville, and the connecting point at Knightstown, besides accommodating a large local interest."

☞ The Council of the city of Alton, Illinois, have rescinded their resolution to withhold the payment of the interest due on the 1st inst. on certain bonds endorsed by the city. The Alton *Courier* says:

The most important action at the Council was that in relation to the payment of the railroad interest. The Council took the back track quite gracefully, on the whole—voted to rescind the former votes withholding the interest on the Chicago and Mississippi road bonds, and voted $3,000 for the payment of the July interest on the Terre Haute road bonds. The vote on each question stood nine to three. We need not say that we most heartily rejoice at this action of the Council. Let everybody understand that Alton does not repudiate—that she stands ready to pay her honest indebtedness. The Council thought itself justified in withholding the interest for a time—we did not; but we can assure them that their present action will receive warm commendation from every one who has the interests of our city at heart.

Shelbyville and Rushville Railroad.

The Cincinnati *Enquirer* says that "the iron has been relaid on this road to within four or five miles of Rushville. Mixed trains of freight and passenger cars are daily run from Shelbyville as far as Manilla, in Rush County. The work will be prosecuted until the whole line to Rushville is completed and made ready for business. This piece of road will, undoubtedly, furnish the outlet of the Junction Railroad, from Cincinnati and Hamilton to Indianapolis until the Junction road is completed."

Southern Railroad.

One of the most important acts of the late General Assembly to the city of Nashville was that reviving the charter of the Southern Railroad Company, and bringing it within the benefits of the Internal Improvement law of 1852, by which it is endowed with State aid. It will form a direct connection with the two greatest roads of our Southern system, the Mobile and Ohio and the New Orleans, Jackson and Great Northern. This connection is the shortest that has ever been projected between Nashville and New Orleans, and when completed will form the main trunk traveling between the South-western and the North-eastern States.—*Nashville Patriot.*

Richmond and Lynchburg Railroad.

We learn from the Richmond *Dispatch* that a bill was passed by the Virginia Legislature, at its recent session, chartering a company to construct a railroad from Richmond to Lynchburg. The bill appoints Messrs. Thomas W. McCance, James Lyons, H. W. Fry, Joseph R. Anderson, H. L. Kent, D. H. London, and a number of other gentlemen, as commissioners to open books of subscription to the capital stock of the company amounting to $1,000,000. Whenever 2,000 shares are subscribed, the company may be organized and proceed with the undertaking. The route of the road is to be located through Chesterfield, Powhatan, Cumberland, Buckingham and Appomattox to Lynchburg. The *Dispatch* says:

The road will pass through the very best portion of the country on the south side of James river. It will thus bring a fine country into *railroad notice*, greatly enhance its value, and improve it. It will suggests new projects and schemes for that region, which will redound to the advantage of the State as well as the country immediately concerned. The people along the route will not be slow to perceive their interests in this particular. Indeed, it was through their persistent and energetic appeals to the Legislature that the charter for the road was passed. They will, we are sure, go to work cordially and energetically to secure the charter and build the road, in which this city, we are equally confident, will cooperate with no less zeal.

Albany Northern Railroad.

Negotiations have been for some time in progress between different parties in Troy and the owners of the Albany and Vermont (the Albany Northern) Railroad, for the purchase of that property. The sale has been actually consummated in New York, parties in Troy (connected with the Rensselaer and Saratoga and Troy and Boston Railroads) buying $400,000 of the $600,000 of the capital stock of the road. The road sold for $252,-900; there are liens on it, which the new company assume, of $55,000, making the total amount paid $307,000. The road was built in 1851-52, and was first operated in 1853. Its original cost was about $2,600,000. Immediately after the purchase, the new stockholders elected the following Board of Directors: L. G. B. Cannon, Jos. M. Warren, James Forsyth, H. L. Shields, John B. Gale, Thomas W. Lockwood, L. H. Tupper, Chas. W. Tillinghast, of Troy; and on the transfer, Messrs. Corning, Payne and Martin, of the old direction, resigned their places. At a meeting of the new board, L. G. B. Cannon was chosen President, and L. H. Tupper, Superintendent.

The length of the road is 32 miles—commencing at Albany, and West Troy, Cohoes, Waterford, Washington County, and connecting with the Rutland and Washington Railroad.

The road was built to give Albany important railroad connections with the North, and divide with Troy the Northern trade, which she was thought to have secured by the Rensselaer and Saratoga and Troy and Boston Railroads.—*Albany Argus.*

Columbus and San Antonio Railroad.

The San Antonio *Ledger* has an account of the organizing of this company, $300,000 being subscribed at the time. A. M. Gentry, was elected President, Mr. Vance, Vice President, C. M. Congreve, Treasurer, and G. R. Otis, Secretary.

Toledo, Logansport and Burlington R. R.

The election of directors of this company was held at Logansport on the 12th inst. The following gentlemen were chosen: D. M. Dunn, Wm. Chase, Logansport; W. Colburn, Toledo; J. B. Waring, Cleveland; George Palmer, Buffalo; Samuel Gilman, Chas. A. Secor, New York.

Memphis and Little Rock Railroad.

The prospects of the completion of this road are brightening every day. The company recently determined to issue $1,800,000 of bonds based upon the road, the lands, and all of the assets and effects of the road. As the road is entirely out of debt, and as none of the lands accruing to it under the act of Congress have been disposed of, the means of meeting the bonds will be ample, and there is a belief among the best informed business men that they will meet with a ready sale in the market.

There is also, it is stated, a prospect, almost amounting to a certainty that the county of St. Francis, in Arkansas, will take stock in this road to the amount of $100,000.

There are twenty-eight miles of the road graded between the Arkansas and White rivers, and the whole distance between the two rivers will be graded and made ready for the iron without delay. Cross-ties and wood work for the whole of this division are being prepared; and when the work of track-laying commences it will be prosecuted without delay until the whole division is completed.—*Nashville Union.*

Marietta and Cincinnati Railroad.

Since the completion of this road to Belpre, opposite Parkersburg, the business in each direction has materially increased. In March, 1859, the westward business over the Marietta and Cincinnati amounted to $4,500; in March, 1860, $13,000. Eastward business in March, 1859, $4,000; in March, 1860, $9,000.

Williamsport and Elmira Railroad.

This road, including its appurtenances and the franchise of the company, was sold at auction on the 18th inst. The terms of the sale were $5,000 cash and the balance in 20 days—the 1st, 2nd and 3rd mortgage bonds to be received in payment at the value of the share each bond will be entitled to as its proportion of the proceeds of sale on distribution. The property was purchased by Edward S. Whelan, Esq., attorney for the bondholders, for the sum of $100,000.

Cincinnati Stock Sales.

Railroad Earnings.

The earnings of the Milwaukee and Mississippi Railroad for March were as follows:

	1860.	1859.
Freight	$22,481 30	$26,300 05
Passengers	12,517 95	11,482 97
Mails and miscellaneous,	4,296 88	2,269 92
Total	$39,296 13	$40,056 94

The earnings of the Marietta and Cincinnati Railroad in February were $30,000, against $22,-269 in 1859, an increase of $7,700.

The receipts of the Grand Trunk Railway of Canada for the week ending March 31,

were	$77,308 98
Week ending April 2, 1859	51,544 10
Increase	$25,764 87
Total traffic from July 1st, 1859	$2,129,597 90
Same period last year	1,718,529 30
Increase	$416,068 60

The revenue of the Baltimore and Ohio Railroad for March was as follows:

MAIN STEM.

From Passengers	$43,046 88	
" Tonnage	300,034 32	
" Mails	7,833 34	
" Express	4,923 33	
		$355,837 87

WASHINGTON BRANCH.

From Passengers	$30,417 14	
" Tonnage	7,825 56	
" Mails	1,000 00	
" Express	1,052 00	
		40,294 70

N. W. VIRGINIA BRANCH.

From Passengers	$2,574 73	
" Tonnage	25,913 12	
" Mails	866 66	
		29,354 51
Total earnings		$425,487 08

Summary of Revenue for March, 1859 *and* 1860.

	1859.	1860.
Main stem	$330,452 86	$355,837 87
Washington Branch	40,756 27	40,294 70
N. W. Virginia Railroad	29,775 55	29,354 51
Totals	$400,974 68	$425,487 08

—Showing a net increase of $24,502 40.

The fiscal year of the Company commenced with October. The revenue for the first half of the year compares with the first half of the previous year as follows:

	1859-'60.	1858-'9.
October	$416,929 61	$391,395 10
November	431,287 56	380,879 75
December	355,662 13	337,202 27
January	282,070 64	314,201 09
February	332,743 77	303,631 78
March	425,487 08	400,984 68
	$2,244,180 79	2,128,294 65
	2,128,294 65	
Increase present year	$115,886 14	

The details of the earnings of the Galena and Chicago Railroad for March are:

	1859.	1860.
Freight	$50,254 39	$48,257 62
Passengers	34,234 16	26,903 86
Mails, etc.*	2,608 62	3,800 00
Total	$87,097 17	$78,961 48
Decrease		$8,135 69

Corrected earnings for the previous month, $62,698 19.

* This sum is exclusive of $5,823 45 charged for interest March 31, 1859.

The earnings of the Chicago, Burlington and Quincy Railroad in March were as follows:

	1859.	1860.
Freight	$41,128 95	$79,144 90
Passengers	31,158 23	28,641 42
Mails, etc.	1,803 53	1,584 83
Totals	$74,090 71	$109,371 15
Increase		35,280 44
Between Chicago and Burlington, 210 miles		$126,092 65
Between Galesburg and Quincy, 100 miles		33,098 95
Aggregate earnings on 310 miles		$159,182 60
Earnings in March, 1859		114,037 21
Increase		$45,145 39

The earnings of the Hannibal and St. Joseph Railroad for March, 1860, were $113,460 43
March, 1859 66,183 27

Increase $47,277 16

The earnings of the Toledo and Wabash Railroad in March, 1860, were:

For passengers	$21,589 68
Freight	39,458 03
Mail and express	3,366 66
Total	$64,414 37
March, 1859	62,797 14
Increase	$1,727 23

In 1859, the Lake opened on March 7, this year it remained closed throughout the month. The total earnings for three months were:

1860	$149,989 08
1859	141,324 24
Increase	$8,664 84

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of March, 1859 and 1860:

EARNINGS.

	1859.	1860.
Passengers	$35,325 11	$31,308 24
Freight	44,196 13	50,592 20
Other sources	1,816 00	1,721 00
Total	$80,837 24	$84,121 44
Increase		$3,284 20

EXPENSES.

Maintaining road	$6,870 18	$8,675 53
Repairs of machinery	3,244 17	6,181 95
Operating	16,216 11	13,388 73
Total	$25,830 46	*$28,246 21
Increase		$2,415 75

* Included in 1860, expenses are $900 paid car damage done in 1856.

The earnings of the Erie Railroad for the month of March, 1860, were $433,311 76
March, 1859 372,287 45

Increase $61,024 31

The earnings of the North Pennsylvania Railroad for March, 1860, were $32,618 47
Earnings for March, 1859 28,212 12

Increase $4,406 35

In first four months of fiscal year $117,407 25
Same months last year 100,252 12

Increase $17,155 13

The earnings of the Mississippi and Tennessee Railroad for March were as follows:

	1859.	1860.
Receipts from passengers	$5,150 23	$6,482 70
" " freight	6,563 97	10,128 11
" " Ad. Ex. Co.,	74 30	118 36
" " mail service,	368 75	368 75
Total	$12,157 25	17,197 92
		12,157 25
Exhibiting an increase of		$5,040 67

The earnings of the Pacific Railroad of Missouri for March were as follows:

	1859.	1860.
	163 miles.	168 miles.
Passengers	$30,701 72	$27,826 00
Freight	32,358 45	41,350 94
Mails	2,037 50	2,100 00
Totals	$65,097 67	$71,276 94
Increase		$6,179 27
SOUTHWEST BRANCH.	1859.	1860.
	19 miles.	61 miles.
Passengers	$509 63	$1,989 75
Freight	669 77	3,114 23
	$1,179 40	$5,103 98
Increase		$3,924 58

Steam Engineering in 1859.

(Continued from p. 285.)

In all the machinery there are two distinctive classes of defects in construction. There are those which are so palpable as to bring discredit to the designer; and there are those, which, although in certain existence, may pass unnoticed and uncared for, during the life of a machine.

In the first class may be included, want of strength, bad materials, bad workmanship, and deficient knowledge in the expanding and contracting powers of materials; in the second class, we find chiefly, want of adaptation, complication, want of simplicity, errors of principle, and needless difficulties of access for examinations, repairs, and renewals.

We propose to say a few words on each of these classes of defects in steam machinery.

The engineering profession is indebted to the experiments of such eminent men as Fairbairn, Barlow, and others, for a practical knowledge of the strength of those materials used in the construction of a steam engine, and this knowledge is so easily accessible, that ignorance is inexcusable.

Constructive proficiency is obtainable in two ways: by experience, and by a careful study of the properties of materials. Many engineers depend almost wholly upon the former, few trust entirely to the latter; it is only when the two are combined, it deserves the title of engineering.

In old-established firms, where the same class of machine has been constructed for forty or fifty years, a degree of perfection is attained, difficult to be found in new establishments, although the manager may be most competent. There are exceptions to this general statement, and we might, perhaps, instance as one, the hydraulic machinery of Sir W. Armstrong, where there has been almost undisturbed success, and comparatively no failures with a new establishment, and a new class of machinery. We believe we can trace the cause of this success, but we do not feel at liberty to allude to the management in detail of any private establishment.

One strange anomaly in the manufacture of steam engines is the abominable specimens often found driving the tools of the firms who advertise to supply steam engines on the most improved principles. This is more the case in the North and Wales than in the South. You enter a large fitting shop, and hear in one corner, a wheezing, grinding noise, which, upon examination, proves to be a "Pre-Adamite" steam engine, dirty, leaky, and most extravagant in fuel.

How is it that, with such an extended experience, amounting to nearly 100 years, we have yet, at the present time, frequent break-downs and mishaps with our steam machinery? Surely, as such admirers of "precedents," we ought to be exempt from the mishaps of our trans-Atlantic friends, who do not hesitate to throw "precedent" overboard.

We believe the chief cause of our failures is the exclusive spirit existing among our manufacturing engineers, and although this exclusiveness tends to develop in competition, individual excellence and talent, it undoubtedly fosters positive ignorance and contempt for the improvement of others.

We could positively fill pages with particulars of constructive failures, not of small people, but of engineers, employing from 400 to 800 men, and we refer chiefly in these remarks, to marine engineers.

With land and locomotive engines, there are frequent opportunities for the manufacturer to observe defects in daily regular work, but in marine engines, it frequently happens the designer has had little or no experience at sea, and, unlike the Cornish man, he is too proud to "ax what he do'ant know." Hence it is, we find patentees abounding, who profess to supply us with engines so compact that they remind one mostly of those turned Chinese balls, one inside the other; but how they were put together, or how they can be separated, are questions difficult to solve.

It has been our misfortune, or, more correctly, *good* fortune, to be at sea in very bad weather,

with new machinery, and we, therefore, can speak with certainty of the inconveniences—not to mention danger—of defective construction; too much or too little taper in cocks, soft brasses, slack nuts, inaccessible valves, accessible passages for dirt or coal, and imperfect joints, &c.

Beam engines for land or sea have had their day; they have been most efficient, and possess advantages not to be denied; but with the necessity for less weight, fewness of parts, and increased speed, they cannot compete with the oscillating, trunk, and other direct-acting engines.

For land purposes the horizontal engine, with long stroke and connecting rod, will multiply, on account of its small cost and simplicity.

For steam navigation, simplicity is a great desideratum, perhaps we might say as to mechanical construction, it is *the* great desideratum. Compactness is all very well, if it means not an unnecessary waste of room, but compared with efficiency or economy, it is not to be considered. A ton of coal saved, will give 40 cubic feet additional space for machinery, and it will be found that space is economized, not by extreme compactness, which generally induces neglect in maintenance, but by efficiency and economy of fuel; and it is highly satisfactory to know that, in adopting economical principles of construction, the economy attained is not confined to a mere saving of fuel, but of space, and we believe of capital also.

If it is possible to obtain 100 per cent. more power from one ton of coal, there is every reason to believe such increased power can be secured without a corresponding increase in the first cost of the machinery.

These remarks bring us to a subject we wish to impress upon our readers, namely, the dimensions of cylinder and speed of piston.

A large cylinder and a short stroke are synonymous with waste of fuel, and yet large cylinders and short strokes prevail; indeed, in many cases the stroke does not exceed half the diameter of the cylinder. That such engines can realize the benefits to be derived from expansive action is almost impossible, whilst the amount of surface exposed for premature condensation is nearly a maximum.

We are quite alive to the importance of direct-acting screw-engines, running at a high speed, to insure a minimum amount of slip, and the length of stroke is regulated by what is considered a safe speed of piston; and there is reason to fear all efforts to decrease the diameter, and increase the length of steam cylinders, must be very limited, as long as the steam pressure is only 20 or 25 lbs. per inch, and the air-pumps attached to the main engines. With higher pressure the diameter can be reduced, and with separate air-pump engines the number of revolutions and speed of piston can be safely increased.

To insure lightness in engine power, a maximum speed of piston is indispensable, and it may be taken for granted, that from 350 to 500 feet per minute, will be generally adopted for marine engines in a few years. If the speed of an engine is increased 50 per cent., the mean pressure remaining the same, an increase of 50 per cent. of power is thus obtained without any additional outlay of capital, except what is required to give the increased quantity of steam, and it is well known the cost of boilers is only about one-third of that of the engines to which they are attached.

Increased pressure, and increased speed of piston, we reiterate, are among the chief mainstays of future progress in steam power on land and sea.

As a natural consequence of an increased speed of piston, spur wheels, loose cranks, beams, levers, and all needless complications, must be dispensed with, steam must be applied direct to the resistance, and instead of *one* vast unwieldy machine, we must increase the number and decrease the size.

Mechanical lubrication is not sufficiently attended to in fast moving engines; by self-acting lubrication, heating is avoided, and oil saved, and yet, in our mercantile steam navy, how few screw engines are fitted with self-acting lubricators.

Land engines are hardly considered complete without governors for regulating their speed; whilst marine engines, with an ever-varying load in a sea-way, are only preserved from actual break-downs by the constant attention of the engineer in charge—room again for improvement.

With reference to the *evils* of what is called a *compact* engine, we remember a case in which a pair of engines were put on board a ship so compact, that after running a short time, they were removed, simply because no engineer could be found willing to risk his arms and fingers in keeping them in order; and, in a less degree, this is a state of things not at all uncommon at the present day.

There are various details worthy of attention and capable of great improvement, such as increased wearing surfaces, and the position of thrust-bearing, the latter too often forming a portion of engine framing, so as to throw crank pins, connecting rods, &c., out of truth, as the thrust-bearing wears.

And what shall we say about screw propellers? Who knows anything definite about them, except captains and masters of steamships? They are the gentlemen to explain, with the greatest clearness, the precise action of the screw; the only misfortune is, that no two of these gentlemen agree.

We are inclined to the opinion that, if the present amount of experience in the diameter, pitch, and shape, of screw propellers was appreciated and applied, we could greatly increase their present duty.

One fact is proved beyond all doubt, that it is not advisable to have the pitch of a propeller more than 50 per cent. in excess of the diameter. The principles of construction included in what is called Griffiths' screw, are undoubtedly nearer the truth than any other; and there is a general tendency among engineers to adopt those principles, as far as they can, without actually infringing Mr. Griffiths' patents; but still the bulk of our marine engineers adhere to precedent too firmly, to profit by the general experience, and we have in existence a collection of propellers only suitable for a museum of antiquities.

Supposing we have a good pair of engines, how do we place them in the ship? in a clean space by themselves—oh, no! *in the stock-hole*. Yes, hundreds of screw engines, from 70 to 200 H. P., are working in the stoke-hole, placed there, we presume, to receive all the dust and dirt, to act as emery powder on the bearings, and to prevent the possibility of the engineers in charge, keeping the machinery clean—*another advantage* (?) of this arrangement, is the passage of cold air from the engine skylight over and round the cylinders (in inverted engines) before it reaches the ash-pits and stock-hole.

On land, generally, the engine is placed by itself, as it ought to be, but at sea, where repairs are more difficult and costly, grit and dirt are positively encouraged.

It rests with engineers themselves whether they are to have sufficient room on board ship, to place their engines so as to insure easy access for repairs, and perfect separation from the stoke-hole. Steamship owners oppose their own interests, by refusing proper space for machinery, and lose in economy and efficiency to an unknown extent.

We purposely avoid expressing any opinion on the several varieties of direct-acting engines now in use, each has its advantages and disadvantages, but there can be no doubt, a preference should be shown to a long stroke and a long connecting rod. Trunk engines are compact, but they expose a large surface for premature condensation. Oscillating engines are objectionable in many instances, on account of the difficulty of obtaining a simple and effective expansion gear; but faults of detail in the mechanism, sink into comparative unimportance, in comparison with the faults we have alluded to in the "generation of steam" and its "application as a motive power."

Much latitude may be allowed in the position and disposition of cylinders, rods, levers, &c., but *no* latitude can be allowed in the application of correct principles of economy, in the construction of steam machinery; it is in this latter respect we are so very remiss, and whilst we have one hundred plans for some trifling and almost unimportant alteration of mechanism detail, we are sadly wanting in practical suggestions for solid improvement and permanent economy.

In concluding these very brief remarks on the mechanism of the steam engine, it is not consistent with the design of these papers to enlarge on mechanical details, nor to refer to questions quite separate from the economy of steam power, our chief aim being to draw attention to prominent defects, and especially those that increase needlessly, the maintaining and working cost of steam power.

Who knows, with any certainty, the effective duty of different classes of steam engines, as compared with their indicated or total power? the power absorbed in friction may amount to 30, 40, 50, or 60 per cent., according to the perfection of the workmanship and arrangement of the parts of a steam engine, and yet how seldom is a dynamometer applied. On land, of late years, dynamometers have been much introduced, even for engines of only 10 to 20 H. P., but in marine engines, of 100 to 500 H. P., it might be supposed fractional knowledge and experience is of little importance, whether 100 or 200 H. P. is required to overcome friction, is not considered of sufficient importance to justify an outlay of £50 in a dynamometer.

In our next paper, we shall endeavor to give a resume of all the chief points alluded to in this and the five preceding papers.

(To be continued.)

Railroad Progress in Texas.

The Houston *Telegraph* of the 27th ult. furnishes the annexed statement of the present condition of the railroads of Texas compared with their condition last year.

The mileage completed at the two periods was as follows:

Name of Roads.	Mar. 15, 1859.	Mar. 15, 1860.	Increase.
Galveston and Houston	42	50	8
B. B., Brazos & C. R.	45	70	25
Houston T. & Brazoria	10	50	40
H. & T. Central	55	75	20
Washington County	—	11	11

Texas & New Orleans	20	70
Eastern Texas	25	—
Memphis, El Paso & Pacific	50	25
	164½	117½

The progress above exhibited is most satisfactory. One year ago we said that we could not see no reason why there should not be at least 90 or 100 miles of railroad completed within a twelvemonth. We now actually see 135 miles done in that time, and of that amount every mile but one in immediate connection with this city. We now say we can see no reason why we should not complete 125 miles in the year to come. Railroads are moving steadily along in Texas, and but few years can elapse before our State will be emphatically the railroad State of the Union.

Journal of Railroad Law.

POWER OF RAILROAD CORPORATIONS TO ALIENATE THEIR FRANCHISES.

The case of George S. Coe *vs.* The Columbus, Piqua and Indiana Railroad has just been decided by the Supreme Court of Ohio. It came up on an appeal from the Common Pleas of Franklin County. The substance of the decision is that the railroad company in question could not sell or transfer its corporation. The State transfers to a railroad company certain rights, which the State only enjoys, and which only the State can transfer to another, these rights are not transferable by the company.

The argument in this case has not yet been made public, but the abstract of the decision is as follows:

GHOLSON, J.—I. Certain persons, their associates, successors and assigns, were created a body corporate, with succession, with power to sue and be sued, plead and be impleaded, defend and be defended, contract and be contracted with, acquire and convey, at pleasure, all such real and personal estate as may be necessary and convenient to carry into effect the objects of the incorporation. The corporation was authorized to construct and maintain a railroad between certain termini, and to demand and receive for the transportation of persons and property a compensation not exceeding certain specified rates. It was also authorized to appropriate, by proceedings under a general law regulating such proceedings, land necessary for its railroad track, the property of individuals. Held—1st. That under these general powers the corporation had no power to alienate the franchise to be a corporation, or the franchise to construct and maintain a railroad, and receive compensation for the transportation of persons and property, nor any interest in real estate acquired and held solely and exclusively for the purpose of the exercise of such franchise. 2. That after the railroad had been constructed and prepared for use, things requisite for that use, such as locomotives, cars, and the like, not affixed to the land being acquired by the corporation, are to be regarded as personal property, subject to alienation and liable for debts. 3. That the corporation could not make a mortgage of any property, such as the above described, to be subsequently acquired, so as to give it validity, in other manner, or to a greater extent than an individual owner of personal property.

II. The corporation held a grant of power to borrow money not exceeding its capital stock, at a rate of interest not exceeding seven per cent., and to execute bonds therefor, and to secure the payment thereof, by a pledge of the property and income of the company. And a subsequent grant of a like power, and the authority to pledge was expressed to be "by mortgage or otherwise, the entire road, fixtures and equipments, with all the appurtenances, income and resources thereof." Held—1. That under the power thus granted for the special purpose of borrowing money, the company could not mortgage the franchise to be a corporation appertaining to the individual members of the corporation, but could mortgage the franchise of the corporation to maintain the railroad and receive compensation for the transportation of persons and property, and could mortgage property connected with the railroad and the use of its franchise, whether real or personal, to be subsequently acquired. 2. That the power which the company had, to institute a judicial proceeding to appropriate private property, was not transferable, and that the mortgage of the company could give no right to the exercise of such a power which the provisions of the general law on the subject did not authorize. 3. That the execution of a mortgage by the company, under such special power, could give no exemption of its personal property from a liability which might be otherwise created by its own act or judicial proceeding, that the execution of a like mortgage upon personal property, by an individual, would not create.

III. The company issued bonds, and executed mortgages to secure their payment, under its special power. The bonds were made payable ten years after their date, with interest at the rate of 7 per cent., payable semi-annually. They were negotiated by the company at a discount, and a part of them were exchanged for iron rails. Held—1. That it was a proper exercise of the power, to make the interest on the bonds payable semi-annually. 2. That the act of March 3d, 1851, which authorized the directors of the company to sell or negotiate the bonds issued by said company, at such rates as they might think proper, and which provided that the bonds so sold should be as valid in every respect as if sold at their par value, applied both to the bonds and the security given for their payment; and, therefore, the sale of the bonds on a discount did not render invalid the mortgages. 3. That the company having received authority to sell the bonds at less than par value, there could be no ground for prohibiting an exchange of the bonds for iron rails, and the fact of such exchange, or the intention to make it, did not invalidate the bonds or the mortgage.

IV. The company executed three mortgages upon its property and income, the property in possession and to be acquired. Two of these mortgages were properly executed and recorded, but the second in order of time, executed in New York and acknowledged before an Ohio Commissioner in that State, had but one witness. The third or subsequent mortgage was expressly made subject to the first and second. Held, that whether the second mortgage be regarded as creating a legal or equitable claim it was entitled to a priority over the third.

V. A creditor having been permitted to levy an execution upon a part of the personal property, including a portion acquired subsequently to the date of both the second and third mortgages, but this levy having been made after the action was brought and while the property was in the hands of a receiver appointed in the case. Held, that as against even the equitable claim of the second mortgage the creditor was not entitled to a preference.

VI. The consideration of the debt for which the credit or recovered judgment was for moneys advanced in payment of interest for the company, and taxes assessed against the company, and for rights of way paid for by the creditor. Held, that such consideration of the debt due from the company, created no equitable claim upon the property conveyed by the mortgages.

VII. The mortgages executed by the company were to trustees for the benefit of the holders of the bonds. They provided for the payment of the interest and principal of the bonds and contained a defeasance. The instruments also purported to give to the trustee an authority to sell the property, upon conditions, at a place and in a mode prescribed. The action was brought to obtain relief and the relief asked was, a sale under the order of the court. Held, 1. That the parties were entitled to such sale. 2. That the property must be sold as real and personal, and that the real estate must be sold according to the rules governing sales of real estate, and must, therefore, be appraised. 3. That the railroad, with its fixtures, constituting an entire tract of real estate, indivisible for the purpose of the sale, together with the franchise connected therewith, should be sold in like manner as an entire tract lying in two or more counties, and the proceedings incidental to the sale should be had in the county in which the action was brought. 4. That the personal property should be sold as personal property, but might be sold with such precautions as to prevent a sacrifice and to produce the highest price, which the Court, in its discretion, might order. 5. That the mortgagees must be regarded as proceeding on that part of the instrument which operates as a mortgage, and not under the power to sell, and, therefore, the Court would not be authorized, in this action, to charge, upon the proceeds realized by a sale, an allowance for the trouble of such mortgagees, or the fees of their counsel. 6. That the mortgagees represented the bondholders, and the latter were neither necessary nor proper parties to the action, and that any question as to the amount for which the security would be available, must be made with the mortgagees, by an issue in the action. 7. That the mortgagees, as between them and the company, would be authorized to receive the proceeds of the sale, but the company would have the right to require that, upon, or before, payment of the proportion payable upon any bond, it should be produced, and, if paid in full, canceled, or if paid in part, such payment to be credited. 8. That any question as to the party entitled to receive the money on a bond, or as to the proportion payable on any bond lost or destroyed, or questions which may arise between the mortgagees and any bondholder, need not be anticipated by any order to be made in the action between the present parties, but should be disposed of when they arise in another action, or in a supplementary proceeding. 9. That an order made requiring the bondholders to prove their claims and state the amount paid for the bonds was erroneous.

VIII. A party owning lands entered into an agreement with the company by which it was allowed to enter on the lands and construct the track of its road. It was to pay for the use of the land, upon an estimate to be made by persons selected, within sixty days after such estimate. The agreement provided that if payment was not made, the interest which it gave, and the fixtures and works constructed, should become the property of the party, as if the agreement had not been made, and "said company had without authority and in its own wrong entered upon said land and made said road through the same." The estimate having been made, and the payment not made within the time, an injunction was asked to restrain the company from using the land for its railroad track. Held, that an injunction was properly refused, and that the party should be left to pursue the ordinary legal remedies.

Judgment reversed.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, April 21, 1860.

Atlantic and Great Western Railroad.

There now seems to be little doubt that this long talked-of project is to be speedily accomplished—at least that portion of it between the Erie Railroad and Warren or Akron, Ohio. When either of these points is reached, connections will be formed of great importance to the proposed road, as well as to the Erie Railroad.

The state of affairs in reference to the Atlantic and Great Western, is substantially as follows: It has, by a recent act of the Legislature, become possessed of the Erie and New York City Railroad, the grading of which is completed from the Erie Railroad, at Great Valley, to Jamestown, something over 30 miles. For the purpose of finishing up this portion of the line, the Erie Railroad Company are now transporting the rails over its own road. From Jamestown only a small expenditure is necessary to extend the road to the boundary line of Pennsylvania. Within that State, we learn that the contractor has already one thousand men at work; the construction of this portion of the road is to be driven forward with all possible despatch. The parties building it have several thousand tons of rails in this city, or on the way to the line of the road. A large amount is also coming forward from England, sufficient with that already arrived to carry the road to Akron. They are also reported to have already provided a sum for the preparation of the road-bed for the rails. There, therefore, seems to be no longer any reasonable doubt of the early completion of this long-mooted project, at least that section between the Erie road and Akron, which is by far the most valuable portion of the whole route, which extends to Cincinnati.

We see no reason why a road between the Erie Railroad and Akron should not pay on a fair cost. The connections formed will be most important. At Akron communication can be had with railroads extending to Cincinnati, Chicago and St. Louis. An arrangement will undoubtedly be made with the Cleveland and Mahoning Railroad, to extend the broad gauge into the City of Cleveland, thus making a continuous line between that important city and New York.

One of the most important results of the accomplishment of this new work will be its influence on the value of the New York and Erie Railroad. This work will then have every advantage of position that any great trunk line can possess. In the State of New York it connects by lines of a similar gauge with three great towns in Central and Western New York—Syracuse, Rochester and Buffalo. By the proposed work it will be extended to Erie and Cleveland. Should it go no further than Akron, it will then be in intimate and friendly relations with the entire system of railroads in the interior, which it now reaches through lines hostile to it. In this respect it has for some time past been in a subordinate and unfortunate position. With the Atlantic and Great Western Railroad completed, it must become a vastly more important and valuable work, and occupy a much higher position in public estimation, than at any previous period in its history. In fact, we presume, the apparent certainty of the early completion of the Atlantic and Great Western has had not a little to do with the recent improvement in the securities of this road.

We are also informed that a contract has been recently made for constructing a railroad directly from Jamestown to the City of Erie, thus bringing the Erie Railroad into connection with the Lake Shore line at that point. The building of this road, by the Lake Shore line, is a necessary result of the construction of the Atlantic and Great Western as a matter of self-defence.

The Recent Attempt to Tax Our Railroads.

The Legislature has finally adjourned, and left our railroads *untaxed*. They had a narrow escape. They have been put to great inconvenience, and the campaign has undoubtedly cost them no small sum; but the thorough ventilation of the whole subject of taxing industrial processes, leading to the formation of a better enlightened, and more favorable public opinion, to protect them against similar attempts, unquestionably leaves them all the better off for the contest. The opponents of our railroads can never go into a similar contest under equal advantages. They took a *snap* judgment of the case, and thought they had everything their own way. Time was gained, and with it their disgraceful defeat. The Legislature, too, has been taught the useful lesson, to defray the ordinary expenses of government by an honest system of *direct* taxation. Having been forced to this step, the enforced precedent for the future will be the more easily followed.

The authorship of this raid upon railroads, and upon particular interests, undoubtedly belongs to Governor Morgan. Although bred a merchant, he was not long in sinking from the level of a statesman, presumed in his favor, to that of a politician. His administration wanted money. He had not the moral courage to take the only fair and honest course—that of *direct taxation*, for fear it might lose him some votes in a contest for renomination, or for some other political preferment. He consequently cast about him for some rich but weak subject, who might be despoiled of a large sum, annually, without the power of successful resistance. He took the very one that cannot be interfered with, without the greatest harm to the public welfare. Had he taken the Banks or Insurance Companies as the subjects for spoiliation, the justice of the measure would have been equal, but the injury to the public much less. Fortunately, he failed through the pertinacious resistance of the Senate. But the example set by him at the commencement of the session became a passion. One interest, or class, after another were seized upon, and the authority for their spoliation carried through the Legislature, and no one doubts, by direct bribery, with a high hand, and, in many instance, against the veto of the Governor; so well had the Legislature improved upon the model set by himself. Could he, in the outset, have summoned a little manly pluck, and have said to the Legislature: "We must have some money for current charges of government—let us raise it in the good old honest way, by taxation,"—such an appeal would have brought out the better instincts of the Legislature, in a manner that would have defeated, we fully believe, every obnoxious measure passed by it. But the Governor was the first

to set the example of reckless and partial legislation, and the lesson has been terribly improved upon. It will yet return, in full measure, to plague the inventor.

The Railway Bureau and Review.

Our neighbors of the "Railway *Review*" are in a facetious mood, taking for their text a current newspaper paragraph copied by us and headed "Smoke consuming locomotive." We gave no authority, because we found none. As it heightens the fun to laugh in company, we propose to invite the Editor of the "Review" to a feast with ourselves over an elaborate production of his own headed "A new Invention for Street Railways," the following notice of which has been handed us by a person who claims the privilege of joining in the laugh.

NEW INVENTION IN STREET RAILWAYS!!!!

The American Railway *Review* of February 16, in its mechanical department contains a drawing and description of what is entitled 'Bartholomew's reversible City Rail,' which the editor says is one of the "new plans which our miserable city track system has called out," and that it would be "very unfortunate if the plain showing that grooved rails are a nuisance, should blow over without leaving any practical results behind when the reform is simple and convenient."

All this may be taken to be a recommendation, by the editor of that department, of the plan so elaborately illustrated and described, as a complete remedy for the evils of a groove.

Instead of grooving the *rails*, the *wheels* are to be grooved in their tread or tyre to the depth of, say, ¾ of an inch and a width of one and a quarter inches, leaving on one side of the groove what may be termed a *flat* flange 1¼ inches thick on the edge, and on the other side of the groove the usual thin sharp flange. The diameter of the wheel through the groove will be, say, 30 inches, while through the broad flange it will be 31¼ inches. The rails are to be 4 inches wide, flat on one side having a projection or longitudinal ridge on the centre of the other side, ¾ in. in height and 1¼ inch wide, or of the size necessary to fit in the groove of the wheels.

One of the rails is to lie with its flat side uppermost, the other rail to lie with the ridge upwards. One wheel will, therefore, run upon the flat rail, with the *edge* of the broad flat flange as its tread, while the other wheel will run upon the projecting rail, with the *bottom* of its groove as the tread. One wheel is to revolve on a diameter of 30 inches, the other 31¼ inches!! At every revolution of the wheels, one side must either travel 4 inches further than the other or there must be just so much slipping. It is proposed to continue this process until the ridge on the one rail is worn out, when both rails are to be reversed, and the process repeated, simply changing sides until the other side is worn out. It may safely be said that such a contrivance could not run ten feet without going off the track. The broad flat flange on one side would be constantly traveling ahead, crowding the car against the opposite rail, while the other broad flange, the instant it came in contact with a little earth or snow, would raise that side so that the small flange would no longer hold. A more complete apparatus for throwing a car *off* could not be devised, even if the Editor of the "Mechanical Department" should apply all his scientific knowledge for that purpose.

A more absurd and senseless mechanical (?) contrivance was never elaborated, we venture to say, in the columns of a journal professing mechanics as a *speciality* of one of its departments.

Is this to be considered a specimen article? If so, the mechanical department of the Review will be a singular record of our improvements in locomotion.

It remained for that paper to discover that a car with a wheel on one side 4 inches in circumference larger than the other, will be an improvement on one having wheels of equal size.

ENGINEER.

When the Editor of the "Review" will find an equal absurdity in the columns of the JOURNAL, we will laugh—on the other side of the mouth.

Johnson's Patent Gas Regulator and Burner.

We notice this invention as appearing to be desirable in itself, and as affording increased facilities for lighting cars with gas by saving some 25 per cent. of the amount consumed. This saving, when the gas is consumed from a reservoir containing only a limited amount, is something of an object. The point accomplished in this burner is the better consumption of the carbon. It is well known that the ordinary gas is composed of hydrogen and carbon. Hydrogen is very inflammable, and burns, when alone, with a blue flame. Carbon, on the contrary, burns slowly and requires the heat of the hydrogen to perfect its combustion, but possesses in itself all the illuminating properties. In the ordinary burner the gas escapes without burning completely the carbon. The burning of the carbon is accomplished in this invention, by having a chamber in the top in which the gas is retained by passing it through a series of reticulations until it becomes quite hot from the burning jet above, and by the time the gas reaches the flame, it is so hot that the combustion is perfect. We saw this burner tested by a meter register which had been approved by the New York State Inspector, and the result as shown by a comparison of this burner with one of the best kinds of ordinary burners gave a saving of 25 per cent. of gas and a much better light in favor of the ordinary burners.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 18th April, 1860, were as follows:

East Tennessee and Virginia Railroad.

The gross earnings of the East Tennessee and Virginia Railroad for the month of February, 1859 and 1860, compare as follows:

	1859.	1860.	Increase.
Freight	$4,229 77	$7,449 21	$3,219 44
Thr'gh pass'gers.	8,197 72	10,241 73	2,044 00
Local do.	4,589 75	6,061 02	1,471 27
U. S. Mail	2,170 00	2,178 33	8 33
Express	235 95	602 43	366 48
Total	$19,423 19	$26,532 71	$7,109 52

This shows a gratifying result. The increase over the month of January, 1860, is $4,474.19, while the increase of the month of February over the month of January, 1859, was only $128.44.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, April 21, 1860.

Atlantic and Great Western Railroad.

There now seems to be little doubt that this long talked-of project is to be speedily accomplished—at least that portion of it between the Erie Railroad and Warren or Akron, Ohio. When either of these points is reached, connections will be formed of great importance to the proposed road, as well as to the Erie Railroad.

The state of affairs in reference to the Atlantic and Great Western, is substantially as follows: It has, by a recent act of the Legislature, become possessed of the Erie and New York City Railroad, the grading of which is completed from the Erie Railroad, at Great Valley, to Jamestown, something over 30 miles. For the purpose of finishing up this portion of the line, the Erie Railroad Company are now transporting the rails over its own road. From Jamestown only a small expenditure is necessary to extend the road to the boundary line of Pennsylvania. Within that State, we learn that the contractor has already one thousand men at work; the construction of this portion of the road is to be driven forward with all possible despatch. The parties building it have several thousand tons of rails in this city, or on the way to the line of the road. A large amount is also coming forward from England, sufficient with that already arrived to carry the road to Akron. They are also reported to have already provided a sum for the preparation of the road-bed for the rails. There, therefore, seems to be no longer any reasonable doubt of the early completion of this long-mooted project, at least that section between the Erie road and Akron, which is by far the most valuable portion of the whole route, which extends to Cincinnati.

We see no reason why a road between the Erie Railroad and Akron should not pay on a fair cost. The connections formed will be most important. At Akron communication can be had with railroads extending to Cincinnati, Chicago and St. Louis. An arrangement will undoubtedly be made with the Cleveland and Mahoning Railroad, to extend the broad gauge into the City of Cleveland, thus making a continuous line between that important city and New York.

One of the most important results of the accomplishment of this new work will be its influence on the value of the New York and Erie Railroad. This work will then have every advantage of position that any great trunk line can possess. In the State of New York it connects by lines of a similar gauge with three great towns in Central and Western New York—Syracuse, Rochester and Buffalo. By the proposed work it will be extended to Erie and Cleveland. Should it go no further than Akron, it will then be in intimate and friendly relations with the entire system of railroads in the interior, which it now reaches through lines hostile to it. In this respect it has for some time past been in a subordinate and unfortunate position. With the Atlantic and Great Western Railroad completed, it must become a vastly more important and valuable work, and occupy a much higher position in public estimation, than at any previous period in its history. In fact, we presume, the apparent certainty of the early completion of the Atlantic and Great Western has had not a little to do with the recent improvement in the securities of this road.

We are also informed that a contract has been recently made for constructing a railroad directly from Jamestown to the City of Erie, thus bringing the Erie Railroad into connection with the Lake Shore line at that point. The building of this road, by the Lake Shore line, is a necessary result of the construction of the Atlantic and Great Western as a matter of self-defence.

The Recent Attempt to Tax Our Railroads.

The Legislature has finally adjourned, and left our railroads *untaxed*. They had a narrow escape. They have been put to great inconvenience, and the campaign has undoubtedly cost them no small sum; but the thorough ventilation of the whole subject of taxing industrial processes, leading to the formation of a better enlightened, and more favorable public opinion, to protect them against similar attempts, unquestionably leaves them all the better off for the contest. The opponents of our railroads can never go into a similar contest under equal advantages. They took a *snap* judgment of the case, and thought they had everything their own way. Time was gained, and with it their disgraceful defeat. The Legislature, too, has been taught the useful lesson, to defray the ordinary expenses of government by an honest system of *direct* taxation. Having been forced to this step, the enforced precedent for the future will be the more easily followed.

The authorship of this raid upon railroads, and upon particular interests, undoubtedly belongs to Governor Morgan. Although bred a merchant, he was not long in sinking from the level of a statesman, presumed in his favor, to that of a politician. His administration wanted money. He had not the moral courage to take the only fair and honest course—that of *direct taxation*, for fear it might lose him some votes in a contest for renomination, or for some other political preferment. He consequently cast about him for some rich but weak subject, who might be despoiled of a large sum, annually, without the power of successful resistance. He took the very one that cannot be interfered with, without the greatest harm to the public welfare. Had he taken the Banks or Insurance Companies as the subjects for spoiliation, the justice of the measure would have been equal, but the injury to the public much less. Fortunately, he failed through the pertinacious resistance of the Senate. But the example set by him at the commencement of the session became a passion. One interest, or class, after another were seized upon, and the authority for their spoliation carried through the Legislature, and no one doubts, by direct bribery, with a high hand, and, in many instance, against the veto of the Governor; so well had the Legislature improved upon the model set by himself. Could he, in the outset, have summoned a little manly pluck, and have said to the Legislature: "We must have some money for current charges of government—let us raise it in the good old honest way, by taxation,"—such an appeal would have brought out the better instincts of the Legislature, in a manner that would have defeated, we fully believe, every obnoxious measure passed by it. But the Governor was the first

to set the example of reckless and partial legislation, and the lesson has been terribly improved upon. It will yet return, in full measure, to plague the inventor.

The Railway Bureau and Review.

Our neighbors of the "Railway *Review*" are in a facetious mood, taking for their text a current newspaper paragraph copied by us and headed "Smoke consuming locomotive." We gave no authority, because we found none. As it heightens the fun to laugh in company, we propose to invite the Editor of the "Review" to a feast with ourselves over an elaborate production of his own headed "A new Invention for Street Railways," the following notice of which has been handed us by a person who claims the privilege of joining in the laugh.

NEW INVENTION IN STREET RAILWAYS!!!!

The American Railway *Review* of February 16, in its mechanical department contains a drawing and description of what is entitled 'Bartholomew's reversible City Rail,' which the editor says is one of the "new plans which our miserable city track system has called out," and that it would be "very unfortunate if the plain showing that grooved rails are a nuisance, should blow over without leaving any practical results behind when the reform is simple and convenient."

All this may be taken to be a recommendation, by the editor of that department, of the plan so elaborately illustrated and described, as a complete remedy for the evils of a groove.

Instead of grooving the *rails*, the *wheels* are to be grooved in their tread or tyre to the depth of, say, ¾ of an inch and a width of one and a quarter inches, leaving on one side of the groove what may be termed a *flat* flange 1¼ inches thick on the edge, and on the other side of the groove the usual thin sharp flange. The diameter of the wheel through the groove will be, say, 30 inches, while through the broad flange it will be 31¼ inches. The rails are to be 4 inches wide, flat on one side having a projection or longitudinal ridge on the centre of the other side, ¾ in. in height and 1¼ inch wide, or of the size necessary to fit in the groove of the wheels.

One of the rails is to lie with its flat side uppermost, the other rail to lie with the ridge upwards. One wheel will, therefore, run upon the flat rail, with the *edge* of the broad flat flange as its tread, while the other wheel will run upon the projecting rail, with the *bottom* of its groove as the tread. One wheel is to revolve on a diameter of 30 inches, the other 31¼ inches!! At every revolution of the wheels, one side must either travel 4 inches further than the other or there must be just so much slipping. It is proposed to continue this process until the ridge on the one rail is worn out, when both rails are to be reversed, and the process repeated, simply changing sides until the other side is worn out. It may safely be said that such a contrivance could not run ten feet without going off the track. The broad flat flange on one side would be constantly traveling ahead, crowding the car against the opposite rail, while the other broad flange, the instant it came in contact with a little earth or snow, would raise that side so that the small flange would no longer hold. A more complete apparatus for throwing a car *off* could not be devised, even if the Editor of the "Mechanical Department" should apply all his scientific knowledge for that purpose.

A more absurd and senseless mechanical (?) contrivance was never elaborated, we venture to say, in the columns of a journal professing mechanics as a *speciality* of one of its departments.

Is this to be considered a specimen article? If so, the mechanical department of the Review will be a singular record of our improvements in locomotion.

It remained for that paper to discover that a car with a wheel on one side 4 inches in circumference larger than the other, will be an improvement on one having wheels of equal size.

ENGINEER.

When the Editor of the "Review" will find an equal absurdity in the columns of the JOURNAL, we will laugh—on the other side of the mouth.

Johnson's Patent Gas Regulator and Burner.

We notice this invention as appearing to be desirable in itself, and as affording increased facilities for lighting cars with gas by saving some 25 per cent. of the amount consumed. This saving, when the gas is consumed from a reservoir containing only a limited amount, is something of an object. The point accomplished in this burner is the better consumption of the carbon. It is well known that the ordinary gas is composed of hydrogen and carbon. Hydrogen is very inflammable, and burns, when alone, with a blue flame. Carbon, on the contrary, burns slowly and requires the heat of the hydrogen to perfect its combustion, but possesses in itself all the illuminating properties. In the ordinary burner the gas escapes without burning completely the carbon. The burning of the carbon is accomplished in this invention, by having a chamber in the top in which the gas is retained by passing it through a series of reticulations until it becomes quite hot from the burning jet above, and by the time the gas reaches the flame, it is so hot that the combustion is perfect. We saw this burner tested by a meter register which had been approved by the New York State Inspector, and the result as shown by a comparison of this burner with one of the best kinds of ordinary burners gave a saving of 25 per cent. of gas and a much better light in favor of the ordinary burners.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 18th April, 1860, were as follows:

East Tennessee and Virginia Railroad.

The gross earnings of the East Tennessee and Virginia Railroad for the month of February, 1859 and 1860, compare as follows:

	1859.	1860.	Increase.
Freight	$4,229 77	$7,449 21	$3,219 44
Thr'gh pass'gers.	8,197 72	10,241 73	2,044 00
Local do.	4,589 75	6,061 02	1,471 27
U. S. Mail	2,170 00	2,178 33	8 33
Express	235 95	602 43	366 48
Total	$19,423 19	$26,532 71	$7,109 52

This shows a gratifying result. The increase over the month of January, 1860, is $4,474.19, while the increase of the month of February over the month of January, 1859, was only $128.44.

Don Pedro II Railroad.

EDITOR RAILROAD JOURNAL.

DEAR SIR:—You are aware that the Don Pedro 2d Railroad is in the course of construction, and that the "first section" was opened for use in 1858. You may be somewhat surprised, as I have been, at the extent of trade and travel already accumulated on this short section of 38 miles. The annexed table shows the business from beginning in April, 1858, to the close of 1859:

		Number of Passengers.
April, May and June,	1858	29,841
2d half year,	1858	85,271
1st half year,	1859	79,574
2d half year,	1859	109,038
		304,038

		Passenger receipts.	Freight receipts.	Total rec'pts.
Ap., May and June,	1858.	$24,000	$12,000	$36,000
2d half year,	1858.	55,000	57,000	112,000
1st half year,	1859.	56,000	76,000	132,000
2d half year,	1859.	89,000	140,000	229,000
		$224,000	285,000	509,000

Coffee figures largely among the articles transported, being for the last half year over twenty-seven millions of pounds.

This is certainly a very promising exhibit. The latter half year of 1859 shows more than double the receipts of the latter half year of 1858; the receipts being now over $12,000 per mile per annum on this short section of 38 miles.

The entire length of the road as surveyed and now being finally located under the direction of Major Andrew Ellison, Engineer-in-Chief, is 250 miles, extending from the city of Rio Janeiro to the valley of the Parahyba river, and thence up and down that stream. With no larger receipts per mile than has already been attained on the first section, ($12,000,) the gross annual income will be $3,000,000. Allowing 60 per cent. for working expenses, the net profit would be 6 per cent. on the entire capital, which is, in round numbers, $20,000,000.

Intelligent Brazilians, who are familiar with the extent and capabilities of the great coffee region which this road is designed to accommodate, are of opinion that the business will be considerably greater than the above. At all events, it would seem to be quite certain that this important improvement may be regarded as something more than merely a bold enterprise in a new country—as a wise public measure, and as a judicious investment for the stockholders and the government; the government, with an enlarged spirit, having guaranteed 7 per cent. per annum interest on the stock, and most of the stockholders having collateral interests which will be greatly benefitted by its completion.

The "second section" was let in 1858 to Messrs. Roberts, Harvey & Co., an American firm; an account of which was published in your JOURNAL. The work was commenced in May of that year, a few days after the signing of the contract, but as the bulk of the machinery, engines, implements, &c., at first required, had to come from abroad, chiefly from the United States, a number of months elapsed before a large force could be employed. At the end of June, 1859, the work done on the graduation amounted to about $350,000, whilst at the end of December, 1859, only six months later, it had reached the sum of $836,000; showing a progress, during the six months, at the rate of about one million of dollars per annum. As the section now under construction, covers only 17 miles, this may be considered rapid work, for any country. The contractors are required to complete the first 15½ miles, to the big tunnel on the main *serra*, by May, 1863, and to have the big tunnel holed through by the same period, and finished ready for locomotives to pass, within one year thereafter. From the amount of work already done, and the present rate of progress, there is every reason to expect that they will accomplish what they have undertaken. Beyond the big tunnel, the graduation will be much less difficult, although portions of the line will be heavy work.

A considerable part of the "second section" has been sublet to different contractors, from the United States, England, France, Italy, Portugal and Brazil—the languages of these several countries being spoken on the line. Quite a number of workmen, including most of the mechanics and foremen, are from the United States. The majority of the common laborers are Portuguese of the country, who work very well. A number of blacks are employed also. Some of the latter, under judicious management and training have become first rate workmen and tunnel hands.

Jacob Humbird, Esq., a member of the American firm, has the big tunnel under his special charge. There could scarcely be found either in the United States or elsewhere, any gentleman more thoroughly versed in the business, or more competent to conduct a difficult work of this character. The length of this tunnel is 7,000 feet. At present it is worked direct from the northwest portal, in which they have penetrated 100 feet, and from a shaft at the southeast portal, where the heading has been driven, 180 feet. There are three intermediate main shafts being sunk, from 230 to 330 feet deep. The middle shaft will be down ready for tunneling about August next. It is all granite, and, except near the portals, solid enough to dispense with arching.

Brazilians are enterprising. The first city railroad, extending about five miles towards Tejuca, was opened in 1859, and the business on it has been steadily increasing beyond the calculations of the most sanguine, and faster than the company have been able to provide proper car accommodations. Another railroad, over a hundred miles in length, is about being commenced from Santos, running into the interior.

Jeffersonville Railroad.

The earnings of the Jeffersonville and Indianapolis road for March were $4,000 in advance of the earnings of the corresponding month of last year, and the earnings of the first quarter of 1860 are $10,000 in advance of the corresponding period last year.

Yazoo Valley Railroad.

We learn from the surveying party, engaged in making a reconnoissance of the route of the Yazoo Valley Railroad, that the preliminary survey has been completed from Yocona river, seventy miles from Memphis, to Jackson direct, and has been found most favorable for the cheap and rapid construction of the road. By extending the line direct to Jackson, instead of making a connection with the New Orleans and Jackson road at Canton, from seven to nine miles of distance between Memphis and New Orleans is saved.—*Memphis Bulletin.*

Lexington and Danville Railroad.

This company was organized on the 10th inst., at Lexington, Ky., under the charter recently obtained from the Kentucky Legislature, by the appointment of the following gentlemen as directors: Joshua F. Bell, Chas. Caldwell, W. J. Maberly, Jas. E. Thompson, G. S. Sharklin, L. H. Chrisman, Leslie Combs, Daniel Sinton, R. B. Bowler.

North Missouri Railroad.

The following gentlemen were elected directors of this road on the 2d inst.: Isaac H. Sturgeon, D. M. Frost, John J. Anderson, John Wickham, A. Harper, John Sexton, Jr., James C. Edwards, John W. Minor, James S. Rollins, N. B. Coates, John P. Clark, Daniel E. Bryan, Clay Taylor. An organization was subsequently effected by the election of JAMES C. EDWARDS, *President;* JOHN SEXTON, JR., *Vice President;* J. B. MOULTON, *Chief Engineer* and *Superintendent;* Capt. JNO. LEE, *Secretary* and *Treasurer.*

The St. Louis *Republican*, of 6th inst., says:

We learn from sources likely to be well-informed, that the net earnings of the North Missouri road, during the past year, ending April 1st, 1860, will be about $111,000. The amount of State credit used has been $4,350,000. The annual interest on this amount of State credit is $261,000. From which it will be seen that this road is already, in its unfinished condition, earning nearly half enough to pay the interest on the State credit granted to it. Its business is rapidly increasing. It has cost $20,000 per mile less than any other road in the State, finished with like grades; and, therefore, to make it a paying road, has $1,800 per year on the mile less of interest to earn to make it pay. It has no river or other competitor for the trade. The lands along its whole line are the finest in the State, and are rapidly filling up with population, and being brought under cultivation; and, as this is done, the business of the road must increase. The Hannibal and St. Joseph road is not a competitor for the trade on this road. Whatever this road carries to that road to be distributed to people along its line, to the people living on it or at either end, or whatever the Hannibal and St. Joseph road brings to the North Missouri road, to be brought to St. Louis, is so much clear gain to the North Missouri road.

Had the North Missouri road the means to complete its road to the junction, by ballasting and other necessary work, and had there been sufficient rolling stock to do the business offered it the past year, its net earnings would have been double what they are. But in its incomplete condition, the expense of operating it was much greater than it should be, and its loss of business for want of locomotives and cars, has been very great.

We learn that the Directors have ordered $130,000 of additional rolling stock, consisting of locomotives, freight and passenger cars, which will enable it promptly to do the business that may be offered next fall and winter, instead of subjecting its patrons to delays and expenses and annoyances, such as occurred last fall and winter. They are satisfied that the *net* earnings of the company will enable them to pay for this large amount of rolling stock, and at the same time pay all the other expenses of keeping the road in repair, and operating it.

The contractors for the building of the road north of the junction have done about $85,000 worth of work, and have eleven miles of the track ready for the ties and iron, which would have been put down this month if the railroad bill had not failed. The only means left to continue the work with is the balances due by Schuyler and Adair counties, for which they might issue anticipation bonds, and enable the company to progress with the road until these means are exhausted, when it will have to delay further work until the Legislature relieves the company and allows it to use the means heretofore appropriated.

Lubricating Oil.

To manufacture a lubricating oil, which would not *gum*, would prevent heating, and which would be durable, has been the effort of chemists and of all oil manufacturers. "Lubricating Oil" is valuable inasmuch as it contains minute globulous particles free from gummy material. These globules interpose themselves between the journal and box, on which the journal rolls; but should there be a superabundance of glutinous matter in the oil, it separates, and becoming incorporated with dust and metallic particles, forms a hard substance, which wears out instead of protecting a journal. The oil manufactured by Messrs. J. C. HULL & SONS seems to approach the consummation of that which is requisite in a lubricating oil. They allege that *their own* peculiar process of manufacture decomposes, and entirely frees from their oil, all glutinous material, leaving a most perfect lubricator, which will in no case clog or gum a "journal or bearing." It is sweet and clean, and entirely purified from those inoderous qualities found in many other kinds of oil. The manufacturers offer to supply samples, without reference to quantity, feeling confident that a trial is only necessary to prove its virtues. From its numerous patrons who attest to its superior merits, we confidently bespeak a large success to its originators. For further information we refer to their advertisement, found in another column.

Junction Railroad.

A contract has been entered into between this company and its former president, W. H. Miller, Esq., for the completion of the line from College Corners to Connersville. The Cincinnati *Enquirer* says that "Mr. Miller retains the office of Superintendent, and is to be secured in the receipt of the gross earnings of the road for a certain time, during which it is to be under his control. From the present terminus to Liberty, a distance of eight miles, it will be in running order by the first of July. The road is now completed to the State line, 20 miles from Hamilton; thence to Connersville is 21 miles—and from Connersville to Rushville, the western end of the road, is 17 miles, making the entire line 58 miles. At Rushville, it connects with the Shelbyville road to Indianapolis. There is as yet no contract for the section between Connersville and Rushville, but we suppose the gap will not be permitted to remain long open after it reaches the former place."

Peoria and Hannibal Railroad.

The following gentlemen were elected directors of this company on the 10th inst.: Isaac Underhill, Peoria; H. L. Bryant, T. F. Ross and J. H. Peirsall, Lewistown; Wm. Phelps, Issava; Thos. Hamer, Vermont; and L. D. Erwin, Rushville. The office of the company is at Lewistown, Illinois. The officers are: H. L. Bryant, President; L. D. Erwin, Vice President; D. W. C. Bryant, Secretary; Geo. Phelps, Treasurer; Wm. H. Graham, Chief Engineer.

Cincinnati and Chicago Railroad.

The Cincinnati and Chicago road is to be sold at Logansport on the 28th inst. No bid is to be received until a deposit of $25,000 in cash or $100,000 in bonds is made with the Commissioner by the bidder to secure the payment of his bid. John H. Rea is appointed special Commissioner to carry out the provisions of the decree. The present lessees of the road will probably become the purchasers and form the new company. The original stock, amounting to about $2,000,000, of course, is entirely sunk, as is also a floating debt of some $1,000,000 more or less.—*Cin. Com.*

To Locomotive Builders and Coppersmiths.

10,000 pounds Patent Seamless COPPER TUBES, manufactured by a new patent process.

10,000 pounds Patent Seamless BRASS TUBES, manufactured by a new patent process.

THE HAMILTON MANUFACTURING CO.,
4t16 No. 76 Cedar st., New York.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.
New York, March 29, 1860.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held this day, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, be, and the same is hereby called, payable on the 15th day of May, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. ROBERT BENSON & Co.; and that parties desiring to pay their instalments in London, may pay the same, at the rate of four shillings two pence sterling to the dollar.

Resolved, That the Transfer Books be closed on the 10th day of May, and re-opened on the 15th, and that no transfers be permitted after that date, of shares upon which such assessments shall not have been paid.

Resolved, That interest at the rate of seven per cent. per annum be allowed upon all assessments paid previous to the 15th of May, and charged at the same rate upon all assessments paid after that date. By order of the Board.

A. E. BURNSIDE, Treasurer.

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will send a Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.

☞ Prices exceedingly moderate. ☜

All orders and communications will receive prompt attention. Send for a circular.

Address CHARLES T. PORTER, Patentee and Manufacturer,
235 West 13th St., NEW YORK CITY.

A few reliable Agents wanted.

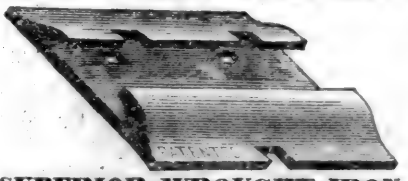
OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

The holders of the Bonds of this Company, due July 1, 1860 can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.



The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.

A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers
2m15 W. H. McHENRY, Secretary.

Gold, Silver and Lead Ores.

THIS COMPANY ARE PREPARED TO PURCHASE OR RECEIVE ON CONSIGNMENT the above Ores on as favorable terms as can be obtained in this country or in Europe.

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans, Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
162 West 28th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads, Machine Shops, Steamships, Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!

PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

R.; UNION CAR WORKS, Portsmouth; WM. M. HIGHT, of Augusta; S. & R. H. RIKERS, WHARTON & PATSCH, Charleston, and all **Roads** where our **SPRINGS** are in use.

Will be happy to furnish a **SET OF SPRINGS** to such companies as may wish to **try** their **Durability** and **Elasticity**, by writing us the Length, Width, Curve over all, and the weight which they are to bear.

VULCANIZED RUBBER GOODS,

MACHINE BELTING,

STEAM & PISTON PACKING,

HOSE OF ALL DESCRIPTIONS,

SHOE SOLEING,

LACE LEATHER,

VALVES,

FIRE BUCKETS, ETC.

THE undersigned, **Wholesale Agents** of the **BOSTON BELTING COMPANY**, beg to call the attention of DEALERS and JOBBERS to the above mentioned goods, which are conceded by all practical mechanics to be

THE BEST PRODUCED.

For list of prices, and a full description of goods, terms, etc., apply to

BRAMHILL & CAMPBELL,

190 William st., near Spruce, NEW YORK.

THE GUTTA PERCHA MANUFACTURING COMPANY,

165 BROADWAY, NEW YORK,

(Factory 25th street 10th Avenue,)

MANUFACTURERS

OF EVERY DESCRIPTION OF

Gutta Percha Goods,

Army, Navy, Engineers and Emigrant Equipments,

CLOTHING,

HOSE, PACKING, BELTING,

LOCOMOTIVE BUCKETS,

ENAMELED CLOTHS, ETC.

These goods are free from offensive smell, are pliable and elastic, of fine finish, and unlike India Rubber, will not become decomposed or injured by oils or acids, or affected by the hottest climates.

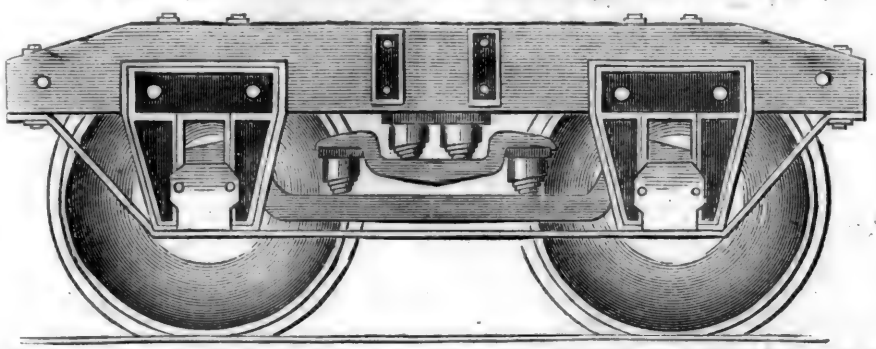
GEO. N. DAVIS, Treasurer.

SUBMARINE BLASTING.

PATENT Electric Submarine Safety Fuse Train for military and civil purposes. Also,

A substitute for the Galvanic Battery for sale by

E. GOMEZ,

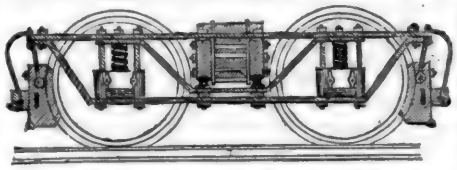


165 Broadway, N. Y.

THE METALLIC CAR SPRING COMPANY

OF NEW YORK,

Manufacturers of PATENT CONICAL VOLUTE STEEL CAR SPRINGS.



OFFICE, 54 WILLIAM STREET, NEW YORK,

WITH increased capital and facilities, and ability to meet all orders promptly, this Company respectfully invite the attention of Railroad Managers, Car and Engine Builders, and others interested in Railroad Machinery and Economy, to these Springs, and the improvements in their application. Orders and correspondence solicited.

CHARLES D. GIBSON, Treasurer. **COURTLANDT PALMER, Pres't.**

Jan. 14, 1860. **RICHARD VOSE, Secretary.**

THE HUMPHREYSVILLE MANUFACTURING COMPANY,

(SUCCESSORS TO DWIGHTS, FRENCH & CO.,)

SEYMOUR, CONN.,

ARE prepared to fill, at short notice, of the best materials and workmanship, orders for **Wrought** and **Cast Iron Work**, fitted ready for use, for the building or repairs of **Passenger** and **Freight Cars**, complete or in part.

A sample wrought iron truck can be seen at our office.

No. 5 Gold st., NEW YORK.

We also manufacture—

BEST FAGGOTTED CAR AXLES.
SALISBURY IRON CAR WHEELS,
WROUGHT IRON BOLTS, NUTS AND WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, President, Seymour, Conn.
WM. H. MARSHALL, Treasurer, No. 5 Gold st., N.Y.

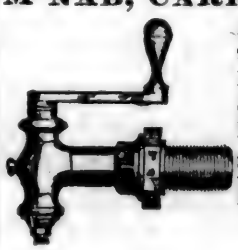
STEEL CAR SPRINGS,

MANUFACTURED

BY THE

PATENTEE,

CARLOS FRENCH,



SEYMOUR, CONN.

THESE **SPRINGS** are now in use on many of the **leading Railroads** East, South and West.

Samples can be examined and Price Lists obtained at

No. 5 Gold st., NEW YORK.

McNAB, CARR & HARLIN,

MANUFACTURERS of Steam Engine Builders' and Plumbers' **BRASS WORK**, such as Globe Valves, Safety Valves, Pump Valves, Whistles, Oil Cups, Steam and Water Gauges, Bibbs, Stops, Basin Cocks, Hose Pipes and Couplings, etc.

All parties interested will please send for Catalogue and Price List. Address

McNAB, CARR & HARLIN,

16 John st., NEW YORK.

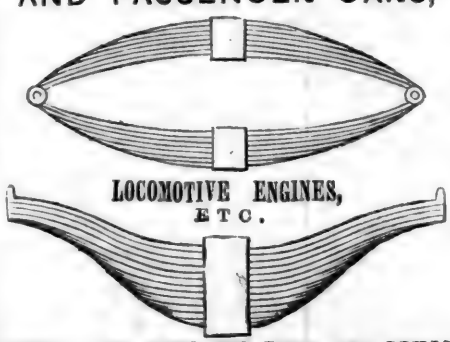
PHILIP S. JUSTICE,

21 North Fifth St., Phila. 54 Cliff St., New York.

152 Congress Street, Boston.

English Railway Springs,

MANUFACTURED OF



Best Double Faggotted and Improved Cast-Steel

EACH SPRING TESTED.

FOR FREIGHT

AND PASSENGER CARS,

LOCOMOTIVE ENGINES,

ETC.

EXTRA CAST STEEL FOR TOOLS AND DRILLS, "CONCENTRIC" SOFT CORE TAP STEEL, (warranted not to crack in hardening,) best double Faggotted and Cast SPRING STEEL, ribbed and plain; Machinists' Files, "Crescent" Faggotted Axles, Wrought Locomotive and Passenger CAR WHEELS, Homogeneous Metal, etc. Manufactured by

CHARLES CAMMELL & CO.,

"Cyclops" Steel Works, Sheffield.

Victoria Bridge.

(Continued from p. 323.)

So far I have only referred to the lattice and Warren girders as constructed in England. Similar results will be found in a comparison of the tubes, with iron girders built in the United States; but one example will suffice. The Bridge across the Green River on the Louisville and Nashville Railroad invented and constructed by Albert Fink, Esq., Civil Engineer, is a fine example of what may be accomplished by a judicious use of the right material in the right place and disposed in the right form.

This bridge is 987 feet in length consisting of three spans of 206 feet each in the clear, and two spans of [illegible] feet each. The top chords or straining beams and all parts subjected to a compression strain are of cast iron. The tension rods and all parts subject to similar strains are of the best charcoal wrought iron. The upper chords or straining beams consist of cast iron cylinders, 12 inches outside diameter and 10 inches inside diameter. These rest at their centres upon cast iron posts of the same size, which are supported at their lower ends upon wrought iron tension rods or chains of bars attached to each end of the straining beams, altogether forming a simple triangular suspension truss sustaining the middle of the bridge.

Similar posts sustain the straining beams at points half-way between the centres and the ends; and those in their turn resting upon tension rods attached to the straining beams at the ends, and immediately over each centre post. These tension rods in connection with the posts and straining beams form secondary triangular trusses which hold up the quarter points. The intermediate spaces are again divided forming eighths which are similarly sustained by posts, and chains attached to the straining beams immediately over the quarter posts.

Again these spaces are divided and the straining beams supported by shorter posts and chains attached as before at the top of the eighth posts. Thus the whole length is divided into 16 spaces or panels of 12¾ feet each—the whole truss being a combination of simple triangular suspension trusses. All the tension rods or chains are provided with screws and keys by which their length can be adjusted and any desirable degree of camber can be given to the truss at any time.

The arrangement permits of the strains upon every part being calculated with the greatest certainty, and is such that the different parts may be connected with the smallest quantity of superfluous material.

The track rests upon cast iron arch floor beams running across between the heads of the posts which are tied together by wrought iron rods. The longitudinal track stringers are of wood. When the tracks are between the trusses, bottom chords are put in connecting the feet of the posts.

These bridges have been constructed on several roads in this country. On the Baltimore and Ohio and North Western Virginia Railroad there are 112. some of them of 205 feet span. They have been used 7 years without an instance of failure.

The "ponderous" size of the parts has not yet reach the limit of practicability feared by Mr. Clarke in the case of the Warren girder.

In the Green River bridge the area of the straining beams in the long spans is 40.86 inches each, and the strain per square inch, when the load is 336 net tons, which includes the weight of the bridge and track and a rolling load of one ton per foot, is 6½ tons.

The tested ultimate strength of the chord is 32⅛ tons per square inch so that the factor of safety is 5. The greatest strain to which the tension rods can be subjected, is 13,000 lbs. per square inch, and their ultimate strength according to the tests made by the builder is 78,000 lbs. The factor of safety is therefor 6. The actual weight of the bridge excluding the track, is 112¾ net tons; including the track 130 tons.

The total cost per foot was £13 15 sh.

The weight of a bridge of this description of 242 feet span with the same factor of safety would be as follows:

Cast iron	182,000 lbs.
Wrought iron	132,500 "
Floor and track	70,000 "
Total	385,000 lbs.

or 192½ net tons, and the cost would be £17 per foot.

The following is a comparison with the Victoria Bridge.

	Fink's Girder.	Victoria Tube.
Total weight	192½ tons.	395 tons.
Relative strength or least factor of safety with a load of 1 ton per foot	5	3.7
Cost per foot	£17	£57

The Fink girder, therefore, weighs 123⅛ tons less, and the factor of safety is 55 per cent. greater. The cost is less than ⅓.

The Green River Bridge is erected at an elevation of 115 feet above ordinary summer water, or nearly twice the height of the Victoria tube, and costs but about as many dollars per foot as the Victoria bridge cost pounds.

This is another practical demonstration of the difference between a structure combining the strongest material in the best possible forms, and one combining the weakest material in the weakest form, and like all the other examples mentioned, it conflicts directly with Mr. Stephenson's theory, that no matter what the description of

girder, they must all be alike in amount of effective material if of same length and depth and designed to sustain the same load.

There is very little difference in cost per ton between the Warren and lattice girders.

It may fairly be assumed that as a question of the practicability of spans of 242 feet upon either design, Mr. Clark was too enthusiastic in his advocacy of the tubes and anticipated difficulties in the "ponderous" size of the parts which have no existence. The Boyne Viaduct is the largest example of the iron lattice bridge in England, but much larger spans have been executed on the continent without meeting with any difficulty in "connecting the parts." A bridge of this description for the Royal Eastern Railway of Prussia has been constructed across the Vistula, consisting of six spans of 397 feet each. None of these bridges have failed, although there have been instances of failures in some constructed of boiler plate. In the London *Engineer* of March 9th it is remarked: "The alleged weakness of the Torksey Bridge is still fresh in the minds of Engineers; and the Spey Viaduct has more recently furnished the profession with another illustration of the *possible* insecurity of structures of that description."

It is quite difficult to understand why the Warren girder should involve any greater difficulty in its construction from the "ponderous" size of its various parts, than any other open-sided girder of the same span. It is quite certain that the weights called for in Mr. Liddell's statement do not begin to reach the point of impracticability. In the Newark Dyke bridge it appears this difficulty was not found, and it is no less certain that, until you require the span at which this point of impractibility *is* reached, the principal argument for the necessity or propriety of the adoption of tubes does not commence, for up to this limit as Mr. Liddell says—whatever be the form—whether as regards might or economy for the same strength, trussed girders are to be preferred to tubes. The tube *may* come in at this limit, not because of its less cost, or less weight, or greater strength, but simply because, no matter what the span, the weight of each individual part is not seriously increased. It has a greater number of parts merely.

But the examples of trussed girders already erected have not yet determined the limit of span which may be reached, and it is quite doubtful whether the limit of the tube is not reached before that of the truss. In all spans yet constructed the greater cost of the tube has been conceded. The London *Engineer* from which I have quoted, says: "We believe, for *equal weights* the lattice system is much the cheaper, and on most of the German and Swiss railways where economy is especially considered, the lattice system is almost exclusively adopted. Even in France the tubular system is being abandoned and the lattice system re-introduced in its stead." If for *equal weights* the lattice is cheaper, it must be cheaper for equal spans, for the tube unquestionably is a combination of the weakest and most expensive material in the weakest form and therefore requiring the greatest weight for a given strength.

It is a most remarkable thing that the "primary and essential" principle which pertains to all girders, viz: that the strength is in the top and bottom requiring the material to be concentrated in these points and at the greatest distance from the neutral axis, and which was so well understood and applied in the wooden bridges of America years before the conception of the Britannia Bridge, should have required such an elaborate and expensive series of experiments as were made for that structure, to develop it, and that so self-evident a principle should not have been acknowledged as a starting point, instead of commencing with cylindrical and elliptical tubes.

It was only after the most elaborate trials with such forms that experiments were made upon rectangular tubes, and not until then that Mr. Fairbairn came to the conclusion that these forms "possessed marked advantages, and that they were not only the strongest but the best adapted, either as regards lightness or security."

As early as 1838, the question as to the propriety of tubes for certain bridges upon the New York and Erie Railroad was discussed by Engineers upon that road; but it was so well understood and admitted that the rectangular form was the proper section, that nothing more than a mere allusion was made to any other.

The conclusion arrived at by this discussion was that the expenditure, which iron tubes would call for, was not "*judicious*"—that the requisite strength could be obtained with wooden structures as readily, as with tubes, and the application of the commercial test, showed that the interest on the difference of cost would rebuild the wooden bridge every three years, while it was well known that without the slightest protection from weather it would last four times this period.

I propose, first, to compare the relative merits of the wooden truss and tube for such spans as are adopted in the Victoria Bridge, disregarding for the time the question of decay. That the practicability of such spans with wood is not a mere opinion, is shown by the many examples that exist in the United States.

1st. The Bedford Bridge (Howe truss with arch,) on the Cleveland and Pittsburg Railroad. The span is 243 feet in the clear; single track; height 20 feet. Was constructed in 1850 at a cost of £6 per foot.

2d. The bridge on the Rochester and Lockport Railroad (Howe truss without arch,) 24 feet high. The span is 230 feet in the clear was built in 1853, and cost for a single track £7 per foot.

3d. A bridge on the Washington Co. Road in Texas (Howe truss without arch); 25 feet high; 250 feet span in the clear; lately built and cost £12 per foot. The wood is southern pine.

4th. The bridge at Bellows Falls across the Connecticut River, (Howe truss with arch) single track; 23 feet high; two spans, 250 feet in the clear each. Built in 1850 and cost £7 per foot.

5th. The bridge at Rock Island (Howe truss with arch); 23 feet high; 5 spans of 250 feet each. Built in 1854 at a cost of £10 12 sh. per foot. All the timber is planed.

6th. The bridge on the La Crosse and Milwaukee Road over the Wisconsin River (Howe truss with arch); 22 feet high; 246 feet in the clear, built in 1857 at a cost of £13 per foot.

7th. Bridge across the Miami river on the Ohio and Mississippi Railroad, (McCallum truss with arched upper chord); 20 feet high at middle, 27 feet at ends; 6 spans, 210 feet in the clear each; single track. Constructed in 1852, at a cost of £6.10 per foot.

8th. The bridge across the Delaware river on the New York and Erie Railroad (McCallum truss); 30 feet high at middle, 20 feet at ends; double track; 2 spans, 262 feet each in the clear. Built in February, 1855, at a cost of £8.10 per foot.

9th. Bridge across the Walkill on New York and Erie Railroad (McCallum truss); 27 feet high at middle, 20 feet at ends; 210 feet span in the clear; double track. Built in February, 1853, at a cost of £8 per foot.

10th. Bridge across Susquehanna river, (McCallum truss); 27 feet high at middle, 20 feet at ends; 188 feet clear span. Built in November, 1851, at a cost of £7 per foot.

11th. The bridge across the same river at Dauphin, near Harrisburg, Pa., on the Northern Central Railway, (McCallum truss), 17 spans, 210 feet each; 1 span, 150, and 1 of 110 feet. Built in 1857, at a cost of £6 per foot.

12th. Clinton Bridge across part of Mississippi river on Galena and Chicago Railroad, (McCallum truss), 7 spans, 200 feet clear each. Built in 1859, at a cost of £5 15sh. per foot.

13th. Mill Creek bridge on the Ohio and Mississippi Railroad, (McCallum truss); 2 spans, 218 feet. Built, 1859, at a cost of £7 per foot.

Many more examples might be cited, but these are sufficient to demonstrate the fact, that spans of 242 feet, with wooden trusses, *are* practicable, and argument on this point is unnecessary. The cost for single track, it will be seen, averages about one-seventh the cost of the Victoria tube. Our much abused wooden trusses, which in the recent furor for iron structures, have almost come to be looked upon as man traps, have then "*safely*" carried their loads across spans equally as great as the Victoria tube; and considering the great number of such structures which have been built in this country, the statistics of accidents will, I think, show a less proportion of failures than among iron bridges. One thing, however, is quite beyond dispute, that where failures have occurred, they have not been from any defects in the wooden parts, which are easily inspected, but from defects in the *iron portions*, which the closest inspection could not detect. A bridge, on the Howe plan, on the Grand Trunk Railway, over the Magog river, broke down, about three years ago, with two engines upon it. A careful examination showed conclusively that *it was the fault of the iron*, and not the wood.

A bridge of the same construction, nearly new, on the same road, near Lenoxville, broke down a few months ago with a freight train upon it. An examination proved that the cause of failure was the weakness of the iron suspension rods, which had been used in the old bridge, but had been welded, in order to lengthen them for the higher trusses of the new structure.

It must be noted, also, that these failures occurred during cold weather, and the presumption is that having been screwed up too tightly during the previous summer, they were not able to withstand the strain due to the contraction produced by extreme cold. It is a question worthy of serious consideration also, whether the inherent strength of the iron was not impaired by a change of its structure during the extreme cold, aside

from any increased strain upon it. The fact that the failure of our iron structures of all kinds, and of our wheels and our axles, almost without exception, occurs at a low temperature, presents an element worthy of the most serious consideration when comparing the merits of iron and wooden bridges. When, therefore, a wooden bridge fails where the most ordinary care only is exerted in its inspection, the inferences that are drawn against wood for such structures, it will be found are not warranted by the facts.

Now let us examine how far wood will compare with boiler plate, in fulfilling the conditions necessary in a proper structure, and first which has the greatest strength for a given *weight* of material.

The strength of boiler plate, arranged in the tubes, as before given, deduced from experiments made for the Britannia bridge, was an average of 18.6 tons per square inch for tension, and 14.8 tons for compression or flexure.

Various experiments upon white pine (the material usually adopted in our American wooden trusses) give us a very low value of its resistance to compression, as usually arranged in the upper chords of these trusses, 2¾ tons per square inch, and as a tensile strength, 6 tons per square inch.

The weight of a cubic inch of boiler plate is 0.2816 pounds. The weight of a cubic inch of white pine is 0.0171 pounds—iron weighing 16½ times more than pine. For the same amount in weight, then, as arranged in the top and bottom of these bridges, the relative tensile strength of boiler plate and white pine is—

Boiler plate	1.
White pine	5.3

And the relative resistance to flexure is:

Boiler plate	1.
White pine	3.06

So far, then, it would appear that white pine fulfills one of the conditions necessary in a proper structure, to such an extent, that disregarding the necessities of the connection of the various parts, the same strength can be obtained with less than one-third the weight in the top, and less than one-fifth the weight in the bottom that is required with boiler plate.

It has been shown that about 30 per cent. of the material in the bottom of the tubes, about 15 per cent. in the top, and about 60 per cent. in the sides, is non-efficient, that is, that this proportion of superfluous material is necessary for the connection of the plates and stiffening the sides.

(To be continued.)

Railroad Subscriptions.

The Common Council of Selma, Ala., have subscribed to the various railroads as follows:

To the Selma and Gulf Railroad, $60,000, in ten year bonds, bearing 8 per cent. interest, paid annually, and when the bonds are paid by the city, the city owns that much stock in that road.

Ten thousand dollars to the North-western Railroad, in ten year bonds, bearing 8 per cent.; the Alabama and Mississippi road is to pay the interest annually until the bonds mature, and when paid the city is to own that much stock in the road.

One hundred thousand dollars to the Alabama and Tennessee Railroad, in ten year bonds, bearing 8 per cent., which is to be paid annually by the Alabama and Tennessee road, until that road is put in complete operation to Gadsden; after that the city to pay the interest, and when the bonds mature and are paid, the city is to own that much stock. The city already has $100,000 bonds out which have been used by that company.

It is contemplated for the city to issue $50,000 worth of bonds to the Alabama and Mississippi road, bearing 8 per cent. for 15 years interest payable annually by the city. The city already has $15,000 of bonds out for this road.

Great Western Railway of Canada.

The half-yearly report of the Directors of this road, made at the recent meeting of the English shareholders in London, states that the receipts on capital account for the six months amounted to £175,553, making the total receipts on that account to the 31st of January last £5,160,267. The expenditures on construction account for six months amounted to £11,720, in round figures, to which is to be added £15,665 of the authorized loan to the Detroit and Milwaukee Railroad. The outlay for new works was only £356.

The following is a statement of the business of the road for six months:

Amount of half-year's traffic and rents	£207,502	19	6
Less working expenses and renewals, &c.	125,284	9	9
Leaving a net revenue of	£82,218	9	9
Adding surplus from last half-year	8,167	15	1
Total	£90,386	4	10
From which the following deductions have been made:			
Balance of general interest account	£30,063	13	5
Paym't on accounts of the Dejardins and Flamb'o accident	5,779	16	10
Proportion of bad debt account	1,186	9	10
	£37,030	0	1
Six m'ths' interest on Detroit and Milwaukee loan to Jan. 31, 1860, not received	12,044	16	2
	£49,074	16	3
Leav'g an available bal'ce of	£41,311	8	7

Out of which the Directors recommend the payment of a dividend at the rate of 2 per cent. per annum, which will absorb £31,693 12s., leaving a balance to be carried to the credit of next half-year's account of £9,617 16s. 7d.

The traffic during the last half-year, as compared with that of the corresponding period, shows a decrease of £3,480 12s. 10d.

In the passenger traffic there is a considerable falling off, as compared with the half-year ending 31st January, 1859; but this decrease did not permit of any diminution in the number of passenger trains, and, consequently, the expenses in this department could not be materially reduced.

In the goods traffic, on the other hand, there is an increase of £14,379 13s. 10d., or 20 per cent., and, in the weight carried, of 32,286 tons, or 29 per cent. The mileage of all trains has increased to 578,312 in the last half-year, as compared with 518,858 in the corresponding six months; but the cost per mile has been reduced from 4s. 2d. to 3s. 10¼d., which is the lowest rate at which the trains have been worked since the opening of the line.

Referring to "the disastrous and impolitic competition of American lines," the Directors present a tabular statement, showing that the large increase which has taken place in business has not been attended with a corresponding increase of receipts. Thus, while the total business of the half-year was far in excess of that of any preceding half-year, with a single exception, the total receipts were not more than three-fourths of those of the year in question.

The Corn Trade of Illinois.

The Chicago *Press and Tribune* publishes an elaborate article on the "Illinois Corn Trade," from which we select the more important facts as follows:

The crop of 1859, as is already well known, was good all over the West, with the exception of some portions of Northern Illinois, Wisconsin and Northern Iowa, where much injury was sustained by the frosts. In Central and Southern Illinois it is known to be large—perhaps larger than ever before in the history of the State. Under ordinary circumstances, therefore, prices would have been low; but as the crop of 1858 was a partial failure, and the country almost entirely bare of corn, before the new crop was ready for market, it altered somewhat the aspect of affairs in this particular.

The following table shows the receipts of corn at Chicago from the 1st of January to the 1st of April for seven years:

1860	bushels.	1,915,706
1859	"	427,739
1858	"	137,116
1857	"	251,549
1856	"	458,940
1855	"	410,185
1854	"	413,065

There has been already delivered of the crop of 1859 as follows:

Rec'ts at Chicago from Nov. 1 to April 1	3,027,181
" Joliet, for Cut-off	123,000
" Cairo	165,034
" St. Louis from Jan. 1 to April 1.	933,468
" St. Louis in Nov. and Dec. (est.)	60,000
Shipped east by Cairo and Mississippi Quincy and Toledo and Terre Haute and Alton Railroads, (est.)	750,000
Total bushels	5,058,683

Of the 3,027,184 bushels received at Chicago, there were in store on the 31st inst., 1,178,600 bushels, and there have been shipped about 1,200,000 bushels, of which 55,497 bushels were sent north by the Chicago and North-western and Chicago and Milwaukee Railroads, and the balance to the east. Of this amount 500,000 bushels have been shipped by rail, and 700,000 bushels before the close of navigation last year. The following table shows the shipments of corn from Chicago, from Jan. 1 to April 1, for seven years:

Shipments of Corn at Chicago from January 1, to April 1, for seven years.

1860	bush. 380,734
1859	130,252
1858	29,919
1857	22,771
1856	9,830
1855	30,204
1854	42,477

From the foregoing it is evident that now at the opening of navigation, we find that 5,058,683 bushels of the corn crop have already been marketed, when under usual circumstances deliveries have only commenced.

The following table shows the prices of corn in this market, on the 1st days of January, February, March, April and May for seven years:

	Jan. 1.	Feb. 1.	Mar. 1.	April 1.	May 1.
1860	46*a*47	42*a*48	42*a*44½	40*a*43	.....
1859	51*a*53	62*a*63	66*a*69	68*a*72½	69 *a*72
1858	30*a*43	30*a*43	30*a*40	34*a*35	37 *a*45
1857	38*a*39	41*a*43	40*a*42	37*a*37	57½*a*60
1856	*a*50	40*a*42	*a*40	40*a*41	36 *a*37
1855	43*a*44	*a*51	50*a*51	54*a*55	67 *a*69
1854	33*a*40	45*a*45	40*a*50	43*a*44	43 *a*45

With regard to 1856, as compared with the present year, it is proper to state that at the opening of navigation in 1856, there were in New York upwards of 1,000,000 bushels of corn in store, and there was a fair stock of old corn all over the country. This year it is very different, as all who have any knowledge of the corn trade know.

In estimating the corn crop of Illinois, the crop of 1855 is usually placed as the largest ever

known. Of that crop in 1856, the receipts at Chi- amounted to 11,888,398 bushels, and only 458,- 940 bushels were received before the 1st of April. In the same year the receipts at St. Louis amount- ed to only 1,093,864 bushels.

Main Trunk Railroad of Georgia.

The directors of this road for the current year, are—J. Screven, W. H. Hodgson. Hiram Roberts, W. H. Wiltberger, Savannah; J. W. Spain, Brooks County; A. T. McIntyre, E. R. Young, of Thomas Co.; E. J. Munnerlyn, of De- catur Co.:

Mr. J. Screven was elected President and H. Roberts, Vice President of the company. The road is now opened to the Allapaha, 138 miles from Savannah. From the Allapaha to the Withlacoo- chee river is a distance of 24 miles. The cars will run to this point in July; the road having been al- ready, for the most part, graded, and the iron pro- vided. The Withlacoochee station is distant 167 miles from Savannah. From that point, Thomas- ville is only 32 miles. The whole road to Bainbridge, 36 miles further, is under contract, and must be graded by January, 1861.

North-eastern Railroad.

The Annual Meeting of this Company was held at Charleston, S. C., on the 4th inst. The follow- ing gentlemen were elected directors: Hon. Chas. Macbeth, Hon. Mitchell King, Col. Allan Macfar- lan, John Ravenel, Esq., Smith Mowry, Esq., and Edward Sebring, Esq.

The report of the president and directors for the fiscal year ending Feb. 29th 1860, was present- ed, from which we learn that the gross earnings were:

From Passengers	$89,428 54
" Freights	149,782 27
" Mails and Minor Sources	37,903 13
	$277,113 94
Less Operating Expenses	154,850 72
Balance	$122,263 22

Which is equivalent to 6-33 per cent, on the en- tire cost of the road.

A comparison of the gross earnings the past, with those of the preceding year, shows the fol- lowing result:

	1858–59.	1859–60.	Increase.
From Through Passengers	$46,447.46	$49,146.96	$2,699.50
From way do.	32,241.78	40,281.58	8,039.80
From freights	108,271.46	149,782.27	41,510.81
From mails, etc.	33,053.04	37,903.13	4,850.09
	$220,013.74	$277,113.94	$57,100.20

—or 25.99 per cent. The report says:

The increase in receipts from through travel has been inconsiderable, owing, with other causes, to the delayed completion of the roads southward of us, from which we are to reap the important advantages of a direct connection with distant points in the South and Southwest.

The operating expenses have been 55 88 per cent. of the gross earnings, a ratio which, not- withstanding the closest economy in our expend- itures, we have failed in reducing to the level generally attained by other roads. Circumstances have forced upon us the continuance of a double daily passenger service, in connection with the roads north of us, at an equal expense, though without a proportionate revenue to that accruing to them from the performance of a similar service.

We have disbursed during the year, under the head of Extraordinary Expenses, and carried to the debit of construction account, the sum of $60,- 204 32 for additions to property, &c., the items of which are stated in the Superintendent's Re- port.

The cost of the road, inclusive of these, with its real estate, interest, losses on sales of bonds, &c., as shown in the Treasurer's statement, is $2,053,315 13

From which deduct net proceeds of transportation to be carried to credit of construction account... 122.263 22

And we have as cost of road, 29th of Feb., 1860, ... $1,931,051 91

The construction account remains open, as ex- penditures have yet to be made for necessary im- provements, outfits, rights of way unsettled, which properly belong to the cost of road.

The indebtedness of the company is as follows:

Capital stock	$897,200 00
First mortgage bonds	700,000 00
*Second mortgage bonds	105,800 00
*Preferred stock	104,200 00
Bonds for real estate	43,910 00
Bills payable	105,590 56
Open accounts	8,184 85
	$2,054,885 41

Assets on hand applicable to above:

Second mortgage bonds	$50,800 00	
Stock in Cheraw and Darlington Railroad	22,597 40	
Stock in Florida Steam Packet Co.	6,000 00	
Post office dues	18,134 38	
Florence Hotel	11,934 41	
Bills receivable	3,505 12	
Cash	10,862 19	
		123,833 50
		$1,931,051 91

Which corresponds with the cost of the road as stated above.

Having excluded from the assets certain real estate, which can be disposed of, as unnecessary to the company's operations, we may assume that the amount so to be realized would cover any probable deficiency between their par and actual value. An examination into the comparative fi- nancial condition of the company on February 28, 1859, and February 29, 1860, will show that while the company's debt has been increased $15,544 49, additions have been made to its property of $60,204 32.

We take pleasure in reporting to you the gene- rally good condition of the road and its machinery. Our rolling stock, consisting of twelve locomotives, eight passenger cars, five second-class, sixty-two box, forty-six platform, and four stock cars, has been found inadequate for the increasing business of the road. Within the past two months we have failed for want of facilities, to move the freights as promptly as otherwise should have been done, and hence it will be necessary to order forthwith another freight engine and twenty box cars.

The extension of our yard accommodations for the reception and delivery of cotton, have fully answered their purpose, but those of our freight depot are still insufficient, and will require imme- diate enlargement. A new and substantial wharf, of palmetto, has been built, and the one originally constructed upon piles, is being replaced by a larger and more permanent one, also of palmetto. With these facilities, proper despatch can be given to vessels arriving there with cargoes of coal, iron and locomotives, to be forwarded by our own, and the South Carolina road, with which we connect at Rikersville. The gross income the past year from this source was $6,708 80.

This review of the company's operations the past year, should be accomplished by a brief re- ference to the circumstances which will most probably increase our revenue the ensuing year.

The interests of the road, and, indirectly, those of our city, have required us to connect twice daily with the through mail passenger trains of the roads northward of us; and, by a comparison of results, you were shown a material deficiency in our pass- enger service. This disparity arises from the fact that they constitute one of the main channels through which the travel between the North and South is constantly flowing and re-flowing, passing by this road, and the city of Charleston, at Flor- ence. The loss of this travel will the more clearly appear to be the chief impediment to our success, from a comparison of our receipts from freights the past year, with those of the Wilmington and Weldon road (which is now paying annual divi- dends of eight per cent.); ours have been $1,468 per mile of road, against $998 per mile on the Wilmington and Weldon road. The latter was opened twenty years ago, and has had the advan- tage of that period for the development of its re- sources; while this road was only opened for through business in October, 1857. That our freights are to increase can be safely assumed— the question, therefore, of greatest interest with us, is the probability of an increase in our revenue from passengers, and the means by which it is to be effected. The reply to this is:

First, By the completion of the Charleston and Savannah Railroad to the Savannah river, whence a temporary connection will be made with the city of Savannah; and thence by the Central road of Georgia, with Macon, Montgomery, Mobile and New Orleans. Arrangements are now pending for the formation of a through ticket between New York, Philadelphia, Baltimore, and the above named points, via Charleston and Savannah.

Secondly, By the continuance of the present daily line of steamers to Fernandina, connecting us at that point with the Florida Railroad, which will be opened in June next, to Cedar Keys, and with the Florida, Atlantic and Gulf road, just fin- ished to Lake City, and there connecting with the Pensacola and Georgia road, now being built to- wards Tallahassee, with the prospect of comple- tion by October next. From Tallahassee to St. Marks the road is already built, which will open to us this second outlet upon the Gulf of Mexico.

The following is a statement of the affairs of the North-eastern Railroad Company on 29th Febru- ary, 1860:

RECEIPTS.

From bonds given by the company in part payment for real estate		$43,910 00
From instalments on stock		897,200 00
From sale of 1st and 2d mortg. bonds		845,000 00
From notes to banks, etc.		105,590 56
From preferred stock		104,200 00
From gross transportation	$277,113 94	
Less expenses	154,850 72	
		122,263 22
From open accounts		8,184 85
		$2,126,348 63

EXPENDITURES.

Bor construction, equipment, right of way, real estate, interest, &c.		$2,053,315 13
ON HAND.		
Notes secured by collaterals	$3,505 12	
Stock in Cheraw and Darlington Railroad Co.	22,597 40	
Stock in Florida Steam Packet Company	6,000 00	
Investment in hotel, at Florence	11,934 41	
Indebtedness of Post Office Department	18,134 38	
Cash	10,862 19	
		73,033 50
		$2,126,348 63

The office of the company is at Charleston, S. C. The officers are:

President, A. F. Ravenel.
Superintendent, S. S. Solomons.
Treasurer, C. Williman.

* The amount in Second Mortgage Bonds is $300,000, but as the Preferred Stock, *to the extent of its issue*, is secured by the deposits of a corres- ponding amount of the Second Mortgage Bonds in the hands of three trustees, this liability is ex- pressed in the aggregate under the above items.

Michigan Southern Railroad.

Subjoined we give a card of Mr. E. C. Litchfield, touching his connection with this road, drawn forth by a recent statement of its organ, the *Evening Post*, which certainly did Mr. Litchfield great injustice:

My attention has been called to a communication in the financial column of a late number of *The Evening Post*, published during my absence from the city, purporting to be in reply to a card of George Bliss, Esq., President of the Michigan Southern and Northern Indiana Railroad Company. In that communication the following paragraph occurs:

"There is not now, and has not been since the year 1850, but one controling power in the Board of Directors of the Michigan Southern Company, viz: the so-called Litchfield clique, or 'Single-eye' clique it might aptly be termed, headed by Edwin C. Litchfield, who is now and has been for ten years, with the exception of some seven months, a director in the company, and, with the aid of his friends in the board, has and does now control, it, and no one can or ought to know this better than Mr. Bliss himself."

Lest any one should be misled by this palpable mis-statement, I deem it proper to make the following correction:

First. My participation in the "control" of that company terminated in October, 1855. Up to that time I had been one of the active managers; since that time I have not occupied any responsible position in the company, nor have I, in any sense of the word, exercised any "control" in relation to it, except *for a period of less than four months*, extending from May to August, 1857.

When my connection with it ceased, in 1855, its capital stock and debt were less than $13,250,000; the gross earnings were nearly $3,000,000; its stock was current at par in the market; its dividends were satisfactory to its stockholders; its credit was unquestioned, and it had never suffered protest upon its paper, or default in payment of its interest.

Between October, 1855, and the Spring of 1857, during all which time I was absent from the country and had no part in the management of the company, its liabilities for capital stock and debt had increased $4,500,000, and reached at the latter period $17,700,000.

For the sole purpose of aiding to provide for that part of the debt which was floating and unfunded, and which then exceeded $2,500,000, I consented, in May, 1857, to take office in the company temporarily; and I retained that official position *less than four months*, when I voluntarily retired from it.

Second. During that period of less than four months the board of directors, of which I was a member, provided one million and a-half dollars ($1,500,000) in money, which was appropriated towards the payment of the company's floating debt—every dollar of which debt had been contracted without any agency of mine, while I was not acting as a manager, and was not even in the country. The $1,500,000 above mentioned was provided by Capital Stock, and did not add to the company's debt.

Third. I repeat therefore that my connection with the management of the company really terminated in 1855, when its stock and debt liabilities were less than $13,250,000, and it was prosperous in all its affairs.

It is true that in 1858 I consented to be elected a director—not with any view of again taking office in the company, or of being, in any sense of the word, one of its active managers. On the contrary, I consented to be chosen solely because I was then gratuitously and unjustly assailed in the public prints by parties who sought to obtain "control" of the company, and who fancied that that was their best way to attain their object. In 1859 I, by letter addressed to the President of the Company, positively declined a re-election; but, as I was not present at the stockholders meeting, my name was used, and I was chosen, without my knowledge or consent. During these two years I have neither been, nor sought, nor desired to be, one of the active managers, nor to exercise any "control" in the management—as every gentleman connected with the company knows. On the contrary, my other engagements have been such that my connection with this company has been entirely nominal.

Fourth. I make this statement, not with a view to reflect upon any administration, or upon any policy of the company, or of any of its managers since 1855; but simply that those who are not familiar with the facts may not be misled by such mis-statements as those in *The Post* to which I have referred. I merely add that I have not taken any part in the canvass now pending with a view to the next election; and it is perfectly well known that I prefer not again to be elected a member of the Board.

EDWIN C. LITCHFIELD.

New York, April 21, 1860.

Life Insurance Companies.

The annual report of the Insurance Commissioners of Massachusetts for the year contains much valuable information. The chapter in reference to Life Insurance embraces a synopsis of all the companies, foreign and domestic, doing business in that State, viz:

Names of Co's.	No. of Policies.	Amount insured.	Net Assets.
HOME COMPANIES.			
Mass. Hospital....	48	$127,700	$22,478
N. E. Mutual	4,011	13,041,484	1,357,636
State Mutual.....	1,788	2,876,590	351,617
Berkshire	860	1,787,650	106,686
Mass. Mutual	2,026	4,210,380	183,516
Total	8,733	$22,043,804	$2,021,933
FOREIGN COMPANIES.			
Mutual Life, N. Y.	11,619	$37,235,392	$5,840,150
Mutual Benefit, N.J.	6,748	22,559,177	2,800,717
Connecticut, Conn.	9,244	22,701,294	2,528,842
National, Vt.....	1,122	1,751,539	187,768
Union Mutual, Me.	1,851	4,368,542	582,844
Manhattan, N. Y..	3,214	10,333,644	670,268
Charter Oak, Conn.	3,306	6,370,840	322,486
Am. Temp., Conn..	1,810	2,515,301	108,453
Knickerbocker, N.Y.	711	1,843,994	110,756
Equitable, N. Y...	174	808,000	7,974
Guardian, N. Y ...	75	209,300	2,876
Totals.....	39,874	110,697,013	13,163,083
Totals.....	48,607	132,740,827	15,185,016
N. Y. Life Ins. Co..	4,417	15,284,718	1,767,133
U. S. Life Ins. N.Y.	2,597	6,375,121	576,664
Totals	55,621	154,400,666	17,528,813

The importance of Life Insurance seems now to be fully acknowledged throughout the United States. The accumulated premiums to meet future losses now amount to nearly eighteen millions of dollars among the companies named above. There are other companies, such as the Pennsylvania Insurance Co., of Philadelphia, the Baltimore Life Insurance Co., and others, whose accumulations added to the above will make an aggregate of twenty millions of dollars, which funds are increasing at the rate of over ten per cent., perhaps fifteen or twenty per cent.

Albany Northern Railroad.

We understand that the track of the Northern Railroad has been relaid from West Troy to Cohoes, and iron is being delivered for relaying to the junction—making in all six hundred tons. The road will be put in thorough repair from the junction to Albany, and making it equal in every respect to the best in the State. We think it safe to anticipate that arrangements will be made in a few days by which passengers will be carried from the depot in Troy, by the way of the bridge, and delivered in Albany, without change.—*Albany Journal.*

Heavy Verdict Against the Hudson River Railroad.

The case of Mrs. Electa Thompson and her husband, John Thompson, against the Hudson River Railroad, to recover damages for injuries sustained by Mrs. Thompson on that road on the 18th of January last, was recently tried in Brooklyn, before Judge Lott and a jury. The facts, as briefly stated in the complaint, are, that on the 18th day of January last, Mrs. Thompson purchased a ticket of defendants at Poughkeepsie for New York. The train was stopped between Sing Sing and Tarrytown to make some repairs, and while at this point was run into by another train, going in the same direction. In this collision, Mrs. Thomas W. Field, of Brooklyn, married that morning, was killed, and several others were seriously injured. Among the latter was the plaintiff in this suit, who had her collar-bone broken and fractured in different places, the bones of one leg, below the knee, and the ankle were broken, and she was otherwise bruised and injured. The defense acknowledged carelessness on the part of the conductor of the train, and, consequently, the case was much simplified.

After examining witnesses to show the circumstances attending the accident, several medical gentlemen were examined as to the character and extent of the injuries sustained by plaintiff. They were of opinion that she would not be able to walk without a crutch for three years or more, and that her shoulder would not be in a condition so that she could use a crutch for several months. After a brief charge from the Court, the jury retired with directions to bring in a sealed verdict. The first ballot stood—five for $8,000, five for $7 000, one for $7,500, and one for $9,000; and it is understood that they finally agreed upon $8,000 for plaintiff.

Railroad from Philadelphia to Cape May.

At a meeting of the board of directors of the Camden and Atlantic Railroad Company held a few days since, the following resolution was unanimously adopted:

Resolved, That the President be authorized to negotiate with the Cape May and Atlantic Railroad Company, for a contract with the said Company, to take the projected railroad from Egg Harbor City to Cape Island City on a lease of fifteen years from the completion of said road, at the rate of seven per cent. per annum on the cost of the road, provided the said cost shall not exceed $500,000, this Company stocking the new road, when finished, and keeping the same in repair during the time of the lease, and allowing the Cape May and Atlantic Company to have the appointment of the two principal station agents, at Egg Harbor City and Cape Island City, and the rent as agree upon, to be first paid out of the receipts from passengers and for freight passed over the new road; provided, that the new road from Egg Harbor City to Cape Island City be completed within two years.

Illinois River Railroad.

The Chicago *Press* states that the work on this road is making satisfactory progress. Thirty miles of the line north from Virginia are completed, and twelve miles south from Pekin are also ready for the rolling stock. A gap of sixteen miles remains to be finished, when the regular trains will at once commence running. It is expected that the entire distance of 58 miles between Pekin and Virginia will be open on or before the 20th of June. Within a month later, the ten miles between Peoria and Pekin will be finished, opening by the Rock Island Railroad to our merchants a new and most important section of the State. The trade from most of it has heretofore gone to St. Louis; railroad communication will, of course, change the current to Chicago.

Acton Copper Mine.

Ten or twelve years ago (in the reports of Sir W. E. Logan in 1847 and 1849) the existence of copper on the south side of the St. Lawrence between Lake Champlain and Quebec was indicated. But he had not then made any minute observations. Subsequently, a rich, large bed of copper ore was discovered in Acton, by Mr. H. P. Merrill on the property of Mr. Cushing, who caused a scientific examination to be made in the summer of 1858. This led to arrangements for working the mine, which were on the whole prudent for all parties, under the direction of L. Sleeper, of Quebec, who had had previous mining experience in Megantic. The operations commenced in September last. The mine is a half a mile south of the Acton station of the Grand Trunk Railway.

Of the unusual richness and purity of a considerable bed of copper ore in this locality, there is not the slightest question. The result of nine weeks' operations was to house 300 tons of ore, estimated to contain about 30 per cent. of pure metal. The working expenses were unusually small; the facilities of carrying the ore to market unusually great and cheap. The value of the quantity housed would be not less than $45,000. The quantity excavated has not made a very great impression upon the mass in sight.

These facts dispose of the question of value of this bed, and the profit of those who work it. The public question which arises, is of the extent of the ore.

The ore consists of the pyritous, variegated and vitreous sulphurets of copper. The first is the least abundant, the third more than the first, the second most of all. The green carbonate appears at the cracks.—*Montreal Gazette.*

Western Hog Crop.

The Cincinnati *Price Current* states the hog crop of the present year at 2,350,822 in number against 2,465,035 last year, a falling off of 114,213 or 4¼ per cent. The crop report by States for the two years is as follows:

	1858-9.	1859-60.
Ohio	638,297	690,858
Indiana	412,289	404,046
Illinois	591,380	504,935
Kentucky	396,117	322,587
Missouri	163,774	190,260
Iowa	153,974	166,546
Wisconsin	33,922	54,600
Tennessee	65,162	36,800
	2,495,035	2,350,822

Cincinnati packed the largest number, viz: 434,499. Next came Louisville, 251,870; Chicago, 166,000; St. Louis, 70,326; Madison, Ind., 59,800; Quincy, Ill., 58,583; Milwaukee, 52,000; Keokuk, 49,060; Burlington, 63,600; and Muscatine, 40,000.

Guarantee of Railroad Bonds.

The Supreme Court of the United States, in term at Washington, has affirmed, unanimously, the judment of the United States Circuit Court for the District of Ohio, in favor of the validity of the endorsement of the Cleveland, Columbus and Cincinnati Company on $400,000 of the 7 per cent. bonds of the Columbus and Piqua Company, now bankrupt. This final decision is, in every sense, a just and righteous one, though nothing more than the Cleveland and Columbus Company ought, in a proper spirit, to have anticipated, when at the instance of two or three of their repudiating stockholders, they attempted in 1856, to shirk this responsibility under color of an injunction before the courts. The judgment of the Supreme Court is, that the endorsement is valid, and that the overdue coupons must be paid, and all subsequent coupons provided for, as though the obligation was an original undertaking by the Cleveland, Columbus and Cincinnati Company. The principal and accrued interest on the debt is (or will be on 1st April,) about $540,000.

Yazoo Valley Railroad.

A party has just returned to Memphis from the survey of the proposed Yazoo Valley Railroad, on which they have been employed for the last nine weeks. Along the valley of the Yallabusha for seventy miles, the road runs over ground as level as the prairies, and the price of construction will be very light. There is only one spot of decidedly high land on the route, that is the dividing ridge of the Yallabusha and the Talahatchie Rivers. When completed the traveler from Memphis for Jackson, will proceed by the Mississippi Road to a spot twenty miles below Panola, where he will enter, in the same cars, on the Yazoo Valley Road, which will take him to Jackson in 205 miles, from whence he can pass to New Orleans on the Northern. This route will save a change of cars and sixty miles distance. The entire road will be 185 miles in length. It is expected that ground will be broken during the next fall.—*N. O. Bulletin, April 14th.*

Proceedings against Railroads in Wisconsin.

The Wisconsin papers publish the following synopsis of a recent act of the Legislature, authorizing the cities, towns and counties of the State which have subscribed to railways, to apply for a receiver in case of default. The provisions are as follows:

Section 1. Provides that in case of such default, heretofore or hereafter made, twenty days having elapsed after default, and three days after demand made of the officer in charge of the corporation at its place of business, the city or town, etc., may apply by petition to the Circuit Court for the appointment of a receiver.

Sec. 2. Directs that the petition shall set forth the default, etc., etc.

Sec. 3. Makes the petitioner plaintiff for the benefit of all holders of bonds or securities.

Sec. 4. Requires the railroad corporation to answer within twenty days after service of a copy of the petition upon the officer in charge. The answer to be under oath. If no answer the petition to be taken as confessed.

Sec. 5. Allows the petitioner to reply or demur to the answer within ten days.

Sec. 6. Provides that if no good defence is set up by the railroad, the Court shall render judgment according to the prayer of the city debt and prior mortgage debts.

Sec. 7. The issues are to be tried as in other civil cases.

Sec. 8. Makes the judgment a lien to be enforced like other judgments, except as otherwise hereinafter provided.

Sec. 9. Allows the petitioner, at any time after filing the petition, upon five days' notice, to apply to the Court or Judge for a receiver, and if the Court or Judge is satisfied of the truth of the petition respecting the alleged neglect to pay the interest as aforesaid, the receiver is forthwith appointed, and is to give bonds to be fixed by the Court.

Sec. 10. Authorizes the receiver so appointed to take possession of, and operate the road, paying the net proceeds into Court.

Sec. 11. Makes the money paid into Court a fund to be distributed among bondholders *pro rata*, according to priority, upon order and notice, to be published in two papers, one at Madison, and one in the county where the Court is held; the notice to be published six weeks, and to fix a day, not less than three months after the date of the order, for distribution. In the meantime bondholders to apply by petition for their shares in the distribution. Subsequent distributions to be made upon notice.

Sec. 12. Gives the receiver all the powers of receivers in other cases.

Sec. 13. Allows execution to be issued only on notice.

Sec. 14. Provides that the receiver shall operate the road till the whole judgment shall be paid.

Sec. 15 and 16. Express the intention of the Act, and repeal former laws inconsistent with this.

Sec. 17. Provides that upon satisfactory security being given for the payment of the interest, the order appointing the receiver shall be vacated.

Sec. 18. Provides that this Act shall not impair existing remedies under mortgage, etc.

Sec. 19. The act takes effect from its passage.

It was approved April 2, and published April 8, in the Madison *Patriot* of that date.

The judgment mentioned, it should be noticed, is to be for the city claim and all prior mortgage debts.

Enamel Faced Brick.

At last, then, we have a really noteworthy improvement in the art of brick making. This improvement consists in coating the surface of the common brick, made in the usual manner, with a hard, indestructible enamel or porcelain facing of any desired color, white, straw, slate, drab or sky-blue. It would be hopeless to attempt to describe the extravagantly beautiful effect that can be produced with a front of these bricks if the colors be harmoniously selected and arranged. The celebrated Porcelain Tower of China would have given us some idea of what we may expect from this material, but from the fantastic puerilities of color the Chinese love to indulge in.

We shall not have long to wait, however, to see some buildings faced with this porcelain brick, as the manufacture of them is being driven up as rapidly as possible. For the first buildings that shall be erected of them, we predict extraordinary prices.

Besides their magnificent and dazzling beauty, these bricks necessarily possess many other good qualities; the enamel rendering them perfectly impervious to damp, and incapable of being affected by atmospheric influences. Marble and stone will hardly ever be used again for veneering the fronts of houses wherever these bricks can be had. We have never seen a marble or stone front a tithe as beautiful as these can be made to look.

It remains only for us to say now, that we understand that the cost will not be very great, the enamel being made principally of cheap and easily procurable materials; the crystalised quartz and felspar entering largely into the composition—the owners of the patent are Messrs. Clark & Johnson, of Bennington, Vermont. Fiske & Ring, of Boston, are the manufacturers in that city; and Messrs. J. Park & Co., 25 Nassau street, for New York city, at whose office samples may be seen, and from whom all further information may be obtained.—*The Builder.*

Railroad from Wilmington to Coatesville.

This newly projected road largely interests Chester County, and as there is now a prospect that it will be built, we have taken some trouble to ascertain the proposed routes and the advantages claimed by those interested in its construction. At present two principle routes are spoken of, one to commence on the north-east side of the city of Wilmington, passing up the Brandywine to Rattle Snake Run, thence crossing the country to Red Clay Creek, up Red Clay Creek, crossing the Baltimore Central road at Kennett Square, and so on to Doe Run and Coatesville. The other plan is to start on the western side of Wilmington at Richardson's Creek passing up and crossing Red Clay Creek near Marshall's, Rolling Mill, thence by Milltown, to Mill Creek, through Hockesson Valley, and on to the source of Mill Creek in New Garden township, crossing the Baltimore Central Railroad at or near Avondale, and thence up White Clay Creek to Coatesville. A committee has been appointed and an engineer employed to examine these, and any other routes that may be proposed, and to report which is the most feasible. This committee, with the engineer, have been attending to their duties during the past week, and will be ready to report at an early day.

That this road will be of great importance to Wilmington is certain, and we have no doubt it will equally benefit the section of country through

which it is designed to pass. A number of manufactories, mills, lime kilns, &c., some of them doing an immense business, would find an outlet by this road, and the business upon it would necessarily be very large. The Pennsylvania Road Company now reach tide water, for shipping coal, via Lebanon Valley and Reading Railroads, shipping their coal at Port Richmond. If their object were to reach tide-water by the shortest route after leaving their own road, they could run to Coatesville, seventy miles further on their own road, and then by this new road, reach the Delaware at Wilmington, which would furnish equal facilities for shipping coal on vessels for other ports. In every aspect of the case, the prospect of the road looks promising, and we have little doubt of its being speedily pushed through.—*West Chester Times.*

Detroit and Milwaukee Railroad.

We have been aware for some time that a movement was in contemplation by the managers of this company to relieve it from the burden of a floating debt amounting to $1,250,000. This has been finally carried into effect, and, by a decree of the United States Circuit Court, this road has passed into the hands of a Receiver on a foreclosure of its Third and Fourth Mortgages, default having been made in the payment of interest on them for the past two years. C. J. Brydges, Esq., Managing Director of the Great Western Railway, has been appointed Receiver by the Court.

A few words will suffice to explain the posture of affairs, and the causes that led to this result, as we understand them.

The original stockholders of the road exhausted all their means in pushing the building of the road half way across the State, besides becoming personally liable to a large amount on contracts. The first loan negotiated in England, amounting to $750,000, was used up in removing this back indebtedness and pushing on the work with the limited balance, and a second loan of $500,000 likewise failed to complete the road, owing to the numberless embarrassments under which it struggled. These two loans were secured by Third and Fourth Mortgages, the stockholders of the Great Western having advanced the means, First and Second Mortgages resting upon the road to the amount of about $4,000,000 for money advanced in the work up to the time that the loans were contracted. On the first two mortgages security was held to the extent of several hundred thousand dollars, in this city and State, and the adjacent Province of Canada, the balance being held in Europe.

With the last two it was agreed that the control of the road should pass into the hands of the Great Western, which company took possession and proceeded to complete the route to Grand Haven, and to ballast and stock the line. This required a heavy expenditure, as there was no rolling stock, station buildings, or other equipments. The sum of $1,250,000 was expended in this work, which constitutes the existing Floating Debt. To remove this has been the object of the movement just consummated.

By it, the Third and Fourth Mortgages and the Floating Debt are consolidated into a Preferred Stock, which is subject to the First and Second Mortgages. This stock, it is confidently believed, can be sold to an amount sufficient to pay off the debt and relieve the road from its embarrassments, and put it upon a hopeful footing as to its future operations.

We understand that, while under this arrangement the old stock is rendered utterly worthless, it is in contemplation to allow it to be exchanged for new stock at a per cent. to be agreed upon between the managers of the road and the holders of the stock, say somewhere in the vicinity of twenty cents on the dollar. As it has been nearly or quite valueless heretofore, the holders are not likely to lose anything not already lost, by the change. We are likewise informed that all existing liabilities for supplies, work, etc., are provided for, and will be paid. No change in the existing management is made, or in the operations of the road. Everything will proceed in the same manner as heretofore.

The capital stock, by this arrangement, is fixed at about $7,000,000.—*Detroit Tribune.*

James River and Kanawha Canal Company.

The following is a brief summary of the provisions of the act recently passed by the Virginia Legislature for the relief of this company:

The act increases the capital stock of the company to $12,000,000. The Board of Public Works is authorized to subscribe on behalf of the State for 74,000 shares of the stock, ($7,400,000,) which shall be a preferred stock. Of this, 72,000 shares are to be taken in full satisfaction of ALL debt due the State by the company, the remaining 2,000 shares, ($200,000,) to be paid for by the State, the money thus paid to be applied to extinguishing the floating debt of the work. The State undertakes, upon the surrender by the holder of any of the guarantied bonds of the company, to issue to the holder instead bonds of the Commonwealth, payable 34 years after date. The company is authorized to borrow $2,500,000, at 7 per cent. interest, for the purpose of completing their canal to Covington, and to execute mortgages for the same, provided that not more than $500,000 be borrowed in any one year. The company is required to constitute a sinking fund at the rate of one per cent. per annum for the redemption of this debt at maturity. The act further provides that $300,000 in 6 per cent. registered stock of the Commonwealth, shall be issued and placed under the exclusive control of the Kanawha Board of Directors of the company, to be expended in improving the navigation of the Kanawha river from its mouth to Loup Creek Shoals; provided that not more than $150,000 of the sum be expended in any one year. For the payment of this $300,000 the State requires a mortgage on the Kanawha line of improvement.

The Board of Public Works is authorized to reverse and alter the rate of tolls of the company, and in case the location proposed for the line of the canal interfere with the extension of the Virginia Central Railroad, to change said location.

Finally, the act provides that if, in six years, the James River and Kanawha Canal Company shall not complete the work to Covington, or the western terminus of the Central Railroad, without further application for aid from the State, all its property and franchises shall become the property of the Commonwealth. The State disclaims any responsibility, other than as a stockholder, for money borrowed under this act.

Pennsylvania Railroad.

This company have delared a semi-annual dividend of three per cent., free of State tax, payable on and after the 15th of May.

New York and Erie Railroad.

The movement in the traffic of the Erie Railroad, under the Receivership, since the first of October last, is as follows:

NEW YORK AND ERIE—HALF FISCAL YEAR.

	1859–60.	1858–59.
October	$474,605	$457,924
November	500,257	446,101
December	409,963	383,426
January	337,221	309,250
February	302,353	300,999
March	433,312	372,387
Total	$2,457,771	$2,269,987
Inc. to April 1, 1860		187,785

This is within $25,000 of the increase made by the Central in the same months, showing that both the great routes of New York are doing an improved business, not at the expense of each other, but in full accord as to rates of traffic, freight as well as passengers.

Covington and Lexington Railroad.

The confirmation of the decree in the matter of the sale of the Covington and Lexington Railroad has been made, so far as the Fayette Circuit Court is concerned. It confirms the action of the Commissioner, and makes provision for the distribution of the fund amongst the incomes, as follows:

First mortgage		$400,000
Second mortgage		1,000,000
Back interest on Second mortgage, and Court expenses		119,500
Preferred Third mortgage		337,000
Back interest on the same		37,184
		$1,893,684
Road sold for		2,125,000
		$231,316
Since proved of Third mortgage	$43,000	
Back interest on same	4,745	
		47,745
Left for the incomes		$183,571
The incomes proved up to Jan. 30, 1855, are		175,839
Is left, which goes to income b'ds proved Feb. 5 1855, but in former report put down March 5, 1855		$7,732

Which bonds amount, with interest, to $16,222, and will pay 47.66 per cent., leaving $164,000 unprovided for, commencing with February 8, 1855, 6 per cent. issue.

Machinists' Lubricating Oil Company.

This company are now manufacturing a new article of OIL, which they are certain will give universal satisfaction as a lubricator—and feel confident that the only recommendation it requires is a fair and impartial trial. For the purpose of testing its merits, samples will be furnished to parties upon application. It is warranted free from all injurious alkalies and acids; and that there is nothing in its composition that can in any wise injure machinery. For slow motioned machinery it will last as long again as sperm or lard oils—and for fine and rapid motioned machinery at least 25 per cent. is saved in the quantity consumed. It removes all gum or gluten caused by using other and poorer oils. We have before us a circular of the company, containing a number of testimonials from parties who have used it; all of whom concur in pronouncing it a superior article. We were instrumental in having some of the oil tried in a large manufacturing established in Brooklyn; and the result of the experiment, as reported to us, was exceedingly favorable. The office of the company is at 58 Courtlandt street, in this city. Address ALEXANDER POPE, Esq., Treasurer.

Victoria Rolling Mill.

This mill, located at the junction of the Ohio and Mississippi, and Terre Haute, Alton and St. Louis Railroads, at East St. Louis, has been purchased by E. B. Brown, formerly general agent of the St. Louis, Alton and Chicago Railroad, and Wm. Cessford, master machinist of the same company. This mill was built to make railroad and bar iron, and will immediately commence operation under the new owners.

The Ohio and Mississippi, and Terre Haute and Alton have already laid new rails from this mill.

The industry and enterprise displayed by Mr. Brown, while railroad manager, is a sure guaranty of success in his present business.—*St. Louis Rep.*

Tyrone and Clearfield Railroad.

This road, under the fostering care of the Pennsylvania Central Company, is progressing, with a fair prospect of an early completion.—*Phila. Inq.*

Long Island Railroad.

The earnings of the Long Island Railroad for the year ending March 31, 1860, were:

From passengers		$193,189 38
" freight		133,200 73
" unloading freight		4,130 07
" mails, etc.		12,434 16
		$342,954 34

And the expenses were:

Operating road	$182,057 48	
New equipment and engine houses	13,553 51	
Interest paid	33,996 33	
Rent of Brooklyn and Jamaica and Cold Sp'g Brooklyn railroad and depot at South Ferry	40,711 41	
		270,318 73
Net surplus		$72,635 61

Compared with the previous year the gross receipts show an increase of $8,916 21
And the expenditures an increase of 14,891 54

Making a decrease in the net surplus of $5,975 33

The decrease in net surplus is attributable to the recent purchase of new equipment at a cost of $13,553 51, while during the preceding year only $658 was expended on that account.

The Long Island Railroad extends from Jamaica to Greenport, 84 miles. A branch owned by the company extends from the main track to the village of Hempstead; its length is 2½ miles, making the length of the road owned by the company, 86½ miles. The road from Brooklyn to Jamaica, 11 miles long, belongs to the Brooklyn and Jamaica Railroad Company. It is leased and operated by this Company, as is also the Syossett Branch 4 miles long, making the entire length of road 101½ miles.

The gross receipts of this road for year ending March 31, 1857, was $307,784; March 31, 1858, $325,313; March 31, 1859, $334,088; March 31, 1860, $342,954. While expenditures for conducting the operations of the road, interest on bonded debt, and rent of branch railroads, were for those years respectively, $289,871, $269,127, $255,427, $270,318; resulting in a net surplus, after paying all expenses, rent, and interest, equipment, and to respectively the years above given, $17,912, $56,186, $78,610, $72,635, and included in the last sum is $13,500 for new equipment, while for this account but $650 was expended the previous year, ending March 1, 1859.

The freight business shows the largest improvement in those years, viz:—$106,095; $119,715; $130,054; $133,200, and an equally satisfactory exhibit for the same years is shown in the economy of the road in runing expenses from $203,431 for the year ending March 31, 1859, we find it gradually reduced to $182,057 the past year. The increased receipts from passengers is not so important. This item shows a falling off of 18,076 passengers "to and from Brooklyn," between March, 1857 and 1860, and a gain of way and commutation passengers in same time 48,149.

The company are about changing the line of its road from Jamaica, running to Hunter's Point, instead of Brooklyn. For this purpose a contract has been made for the construction of a new road between Jamaica and Hunter's Point, for which the Long Island Company are to pay $237,000; 62,000 in cash and 175,000 in its bonds. The new road is nearly completed. At Hunter's Point, opposite New York, the company have purchased on favorable terms a large tract of 600 feet by 190 on firm ground, and 1,000 by 180 over low ground into the East River to the outer line of docks. This land adjoins and is south of the ferry to Thirty-fourth street, New York. The dock is nearly finished and the space is being nearly rapidly filled up.

The cost of the depot property was		$41,000 00
The improvements in progress, comprising dock-slips, depot buildings, car, engine and freight houses, will cost about		66,500 00
		$107,500 00
Of this sum there will remain on mortgage for 20 years	$31,000	
There has been paid off on account of purchase	10,000	
Paid on docks and buildings	6,500	
		47,500 00
Leaving yet to be expended		$60,000 00

The financial condition of the company April 1st, 1860, was as follows:

Capital stock		$3,000,000 00
New York State loan, first lien, due Aug. 1, 1876	$100,000 00	
Less amount of sinking fund in hand of Comptroller	27,595 65	
		72,404 35
Morris Can. Bank loan and interest.		43,895 30
Hempstead Branch loan bonds		300 00
Mortgage bonds due in 1870		500,000 00
Bonds and coupons not presented		21,165 74
Rents, etc.		1,460 50
		$3,639,225 89

The company hold the following assets:

Its own bonds	$53,000 00
" stock	100,000 00
Loans	112,000 00
Other investments	44,855 14
Cash on hand	26,232 25
	$336,087 38

The cost of completing the proposed works of the company is estimated at $157,173.

The officers are:

Wm. E. Morris, *President.*
Wm. S. S. Russell, *Treasurer.*

Galveston, Houston and Henderson R. R.

This road has been sold under a judgment obtained by the home creditors, and bought in by a trustee for their benefit. The new Company obligate themselves to pay all the judgment of creditors, together with the amount of subscriptions paid by certain citizens of Galveston to put the road in running order. They pay ten per cent. of the whole amount down, with interest of ten per cent. on the balance, and are to pay over twenty-five per cent. of the gross earnings of the road annually.

Cincinnati, Hamilton and Dayton Railroad.

The consolidation of the earnings of the Cincinnati, Hamilton and Dayton with those of the Little Miami and Columbus and Xenia, have raised the mortgages of the former up to 87½, and from that to 90 per cent. in the New York market, and its stock to 70 firm in this market. The second issue of Cincinnati, Hamilton and Dayton mortgages was $950,000, and having only $461,000 of first mortgage bonds before it, is now the only security of this company in this or in the New York market, and are, according to a New York authority, advancing. The total share capital of the C., H. & D. paid in is two millions one hundred and fifty-five thousand dollars, on which a semi-annual dividend of 3½ per cent. is now being paid at the Sixth street depot office.—*Cin. Enq.*

Pacific Railroad of Missouri.

We have private advices to the effect that the Governor of Missouri has agreed that he will take no immediate steps to sell out this road in default of the payment of the July interest, amounting to about $96,000, and that he will so pledge himself in writing to the officers of the company. In case this is done, the President of the road, Mr. George R. Taylor, and the Directors, who are all men of wealth, propose to advance $100,000 toward completing the road from Syracuse to Georgetown, a distance of twenty-one miles. Eight miles of this portion are already graded.—*Cin. Enq.*

The Iron Interests of Pennsylvania.

The resolutions passed by the recent Convention of Pennsylvania Iron Masters, approving of the Tariff bill before the House of Representatives, and urging upon Congress not to delay its enactment, are fully justified by the depressed condition of our national industry, and should not be disregarded at Washington. There is great danger that, if the wholly unprecedented and excessive importation of the last two years is not checked immediately, the country will have to suffer another commercial revulsion before a twelvemonth elapses; and there is only one way of checking it, which is by an increase of import duties. The mischief wrought by that most injudicious Tariff change of 1857 is incalculable, and it is high time to repair its damages. Pennsylvania, of all States in the Union, has suffered most under it, and her voice should not fall upon deaf ears. We ask no exclusive advantages. Our interests and those of the East, South and West are identical if properly understood. We desire to see the woollen manufactures of New England, the cotton mills of South Carolina, and every branch of national industry, and all kind of legitimate enterprises throughout the land, flourishing and prosperous. But this will never be while an exhausting drain of specie continues, and native labor remains exposed, as it is at present to foreign competition.

In connection with this subject, the following statistics, which we extract from the official report on Commerce and Navigation of the last year, showing the value of foreign iron and iron manufactures, will be found of interest:

IMPORTS OF IRON AND IRON AND STEEL MANUFACTURES IN 1859.

Anvils and Anchors	$64,315
Bar Iron	4,184,331
Cables	174,701
Cutlery	1,762,103
Arms	314,519
Hoop Iron	387,198
Muskets and Rifles	16,851
Nails, Spikes	84,804
Needles	254,794
Scrap Iron	107,702
Pig Iron	1,049,200
Railroad Iron	2,274,032
Rod Iron	332,801
Saws	26,495
Sheet Iron	752,975
Side Arms	5,716
Cast Steel	1,141,871
Other Steel	905,854
Wire	14,299
Manufactures of Iron	2,150,625
Manufactures of Steel	1,043,405
Total Iron Imports	$17,048,596

This is an enormous sum to spend for foreign iron and iron manufactures in a single year, and that at a time when almost all enterprise is dormant, and no railroads are building, which latter alone induced in former years an importation of rails to the amount of from $6,000,000 to $8,000,000. This only shows the imperative necessity of a further development of our own superior and abundant resources for this important industry. The recent change of the French tariff is commented on in certain interested quarters as a free trade movement, and held up as an example worthy of imitation. But the fact is that it is a modification only of the formerly almost prohibitive tariff of France, and that the motives which

induced to find no application whatever upon our own conditions. France possesses neither coal nor ore deposits considerable enough ever to permit of an extension of her iron industry adequate to the requirements of the Empire. The excessive duty of twenty dollars on the ton of foreign iron did not act protectively to French industry, and so it was reduced by the late tariff change to about twelve dollars per ton, which, it will be admitted, is still a very high rate. We earnestly commend the resolutions of our iron masters to the considerations of Congress, and trust that that body will not adjourn this year without having enacted a tariff law better adapted to the interests of the country than the existing law of 1857.—*Pennsylvanian.*

Journal of Railroad Law.

CHECK HELD BY A PASSENGER PRIMA FACIE EVIDENCE THAT THE COMPANY HAS THE BAGGAGE. TESTIMONY OF PLAINTIFF AS TO ARTICLES LOST IN BAGGAGE.

In the case of Davis *vs.* The Michigan Southern and Northern Indiana Railroad Company, decided in 1859, by the Supreme Court of Illinois, the question as to a check for baggage in the hands of a passenger, being evidence that the railroad company still has the baggage, was raised, and decided in the affirmative by the court. The plaintiff in this suit lost a carpet bag and trunk, the value of which he sought to recover from the company. The checks which he sought to make evidence as against the company were not the checks he, in the first instance, received for his baggage; but, being a through passenger, he exchanged the first ones he received, when near Toledo, for the checks of the connecting road over which he was about to travel on his way to Chicago. He never saw his baggage after leaving Dunkirk, and on arriving at Chicago he called upon the agent of the company, and made application for his lost baggage, telling the agent that if he would get for him his medical diplomas which were in his baggage, he would let the rest go.

At the trial, the plaintiff produced the railroad checks of the defendant, Nos. 2 and 991, and proved that they were the evidence of baggage deposited with the defendants for transportation, and the plaintiff was then sworn as a witness in the case, and testified as to the contents of the trunk and carpet bag, and its value, amounting in the aggregate to $915,25. He also testified to the fact that on arriving at Chicago, he called upon the agent of the defendants, and made application for his lost baggage, telling the agent that if he would give him his medical diplomas he would let the rest go; also mentioned the fact that there was money in the trunk.

The agent of the company testified that the plaintiff said nothing about gold or valuable articles in the first three interviews he had with him in relation to the lost baggage, but afterwards claimed that there was gold and valuable clothing in them.

Upon the back of the ticket which the plaintiff purchased, was written these words—"This ticket entitles the holder to not over eighty pounds of baggage, but not any rate exceeding in value over $100, unless notice is given, and an extra amount paid at double first class rates."

The Court of Common Pleas, where the case was first tried, without a jury, gave a verdict for the plaintiff for $100. The plaintiff, however, appealed the case to the Supreme Court, asking for a new trial, with a view of increasing the amount of his recovery. The following is the opinion of the Court upon the appeal:

BREESE, J.—The delivery of a check to a passenger is intended to release him from all care and superintendence of his baggage while on its journey, and devolves such care upon the agents of the several roads over which it passes, and must be considered as *prima facie* evidence of the delivery of the baggage. On the exchange of checks before reaching Toledo, if the baggage master could not find the trunk and carpet bag, which it seems were connected together and marked with one check, on the Cleveland cars, he should have given immediate notice to the owner from whom he received the check; not having done so, the company must be held to *have received* the trunk and bag, and *to be liable for the loss*, and for the value of such of their contents as can properly be denominated baggage. Was it not for this exchange of checks, the defendants would not be liable; the remedy would be against the Cleveland and Toledo Railroad Company.

On the trial of this cause the plaintiff was sworn as a witness to prove the contents of the lost trunk and carpet bag, and he stated their value at $915.-25, and presented an inventory of the different articles contained in each. The plaintiff was also permitted to prove the value of the trunk and carpet bag, which, under the decision of this Court in the case of Parmlee *vs.* McNulty, he was not authorized to do, nor the value of any other article which could be established by other than his own evidence. The court say, in that case: "The law permits a party to be a witness in his own cause, for the purpose of proving the contents of lost baggage, and even its value where he cannot adduce other evidence of those facts. This is an exception to the general rule of law, and should not be extended beyond the necessity which gave rise to it. Beside the trunk and carpet bag the value of many of the other articles said to have been contained in them, could have been well proved by other evidence, such as the coats, vests, pants, shirts, etc., by a description of them, any dealer could have established their value. But were the articles contained in the inventory, sworn to by the plaintiff, baggage? The wearing apparel is unquestionable baggage, and so must the revolver be regarded under the authority of the case of Woods *vs.* Devin. Regarding the revolver as baggage, and of the value of twenty-five dollars, that, and all the necessary other baggage, amounts in value, as sworn to by the plaintiff himself, to ninety-three dollars and fifty cents only, whereas he has recovered a judgment for one hundred dollars, and should not complain. The money sworn to, whether bank notes, gold or silver, does not appear, and amounting to four hundred and thirty-nine dollars, cannot be considered in any proper sense as baggage; unless it was gold and silver, a trunk is no place to carry it, in railroad traveling, even if wanted for traveling expenses, for it cannot be readily got at for use. Besides, the sum is unreasonable for such a purpose. When a through ticket for Chicago is bought and paid for in New York, the passenger does not require but a small sum to carry him through, and if he travels with much more, and leaves it in his trunk in the baggage car, giving no notice of its contents to the company, he ought not to recover for its loss. If it be gold and silver coin, or bank notes, then he should inform the company of its contents, and pay extra for its transportation and care over it, if demanded.

The money not being fairly included in the term baggage, the conduct of the plaintiff was a virtual concealment of the sum; his representation of the trunk and its contents as baggage in the customary sense of that term and calculated to impose on the company, and that of itself would exonerate them, on the authority of the case of the Chicago and Aurora Railroad Company *vs.* Thompson.

The court here goes into a review of the evidence as to the contents of the trunk and carpet bag, strongly criticising the conduct of the plaintiff, and concludes as follows:

The fact that the plaintiff made no such claim as he now makes, in the first interview with the agent, satisfies us that the claim for more than the court allowed him is fabricated. The judgment of the court below is affirmed.

New York Savings Banks.

The Superintendent of the Bank Department has published a statement of the condition of the Savings Banks of this State, from which the following figures are taken:

RESOURCES.	Jan., 1859.	Jan., 1860.
Bonds and mortgages	$21,014,211	$22,844,594
Stock investment	22,365,172	29,597,774
Am't loaned on stocks	735,394	1,238,905
Loaned on stock securities	50,946	55,237
Invested in real estate	1,072,845	1,101,791
Deposits in banks	4,353,280	4,845,890
Cash on hand	1,010,752	919,961
Other loans	57,892	120,945
Miscellaneous resources	26,969	33,212
Add for cents	90	88
Total resources	$50,687,551	$60,753,396
LIABILITIES.		
Amount due depositors	$48,194,847	$58,178,396
Miscellaneous liabilities	20,046	23,097
Excess of assets over liabilities	2,472,658	2,552,139
Total liabilities	$50,687,551	$60,753,396
Average to each depositor		$20,891
Deposited, year 1859		30,808,383
Withdrawn, year 1859		23,308,109
Received for interest, 1859		3,049,924
Total interest placed to credit of depositors during October, 1859		2,610,912

Number of institutions, 64; number of open accounts, 278,647.

In four years the increase of deposits in the State has been $22,000,000; and in one year, (January, 1859, to January, 1860,) $10,000,000, or over 20 per cent. This is seen in the annexed summary for the five years, 1856-1860:

	New York City and Brooklyn.	Interior Cities.	Total Deposits.
1856	$30,651,121	$5,461,648	$36,112,764
1857	35,597,977	6,412,178	41,699,502
1858	35,925,383	5,497,289	41,422,672
1859	41,076,633	7,118,214	48,194,847
1860	48,954,179	9,223,981	58,178,160

In New York city alone there are 18 of these institutions, with aggregate savings of $43,410,683. In Brooklyn, three, with deposits amounting to $5,543,496. The Bowery Savings Bank had in January last the largest deposit account of any in the State, viz: $9,573,400, an increase of $2,876,-000 within two years. The Bank for Savings increased in the same time, $1,194,000, and the Seaman's, $1,423,000. The others have also increased in a large ratio. Manhattan, 67 per cent.; Emigrant, 60 per cent.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics*."

Years ending.	Railroad. Main Line.	Railroad. Lateral and Branch Lines.	Railroad. 2nd Track and Sidelings.	Road in progress or projected.	Equipment. Engines.	Equipment. Cars. Passenger.	Equipment. Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, April 28, 1860.

Milwaukee and Mississippi Railroad.

This road is one of those instances where the net earnings have been equal to the interest on its funded debt, but where a greater necessity has absorbed them all as they accrued—the protection and proper development of the property of the bondholders. The road has real merit, and must continue to earn a large sum of money. To restore it to an unembarrassed position, it is now proposed to place the same in the hands of the Trustees under the second mortgages. The bonds, $600,000, secured by this mortgage are to be converted into a *first* 8 per cent. preferred stock; the third mortgage bonds, $400,000, into a second class 8 per cent. preferred stock. The balance of net earnings, after paying the interest on the 1st mortgage, and the dividends on the preferred shares is to be used in retiring or buying them up; when they are extinguished, the net earnings to go to the holders of the ordinary shares. These, we understand, are propositions of the Directors, but possessing as yet no binding force. It would be a great misfortune if some plan could not be carried out for the relief of the company. The road will certainly earn the interest on six or seven millions, which, with some adequate plan for the relief of the company, could be made immediately productive.

New York, Providence and Boston R.R.

At a recent meeting of this company, James J. Day of Stonington, Conn., was elected President of said company, in place of Mathew Morgan Esq., resigned.

Michigan Southern and Northern Indiana Railroad.

The annual meeting of this company took place at Toledo on the 25th instant, when the following gentlemen were elected directors and officers for the current year:

Wm. F. Havemeyer, Allen Campbell, Milton Courtright, J. H. Ransom and Henry Keep, of New York; Elijah M. Gilbert, of Utica; Hamilton White, of Syracuse; Nelson Beardsley, of Auburn; Stillman Witt, of Cleveland; John S. Barry, of Constantine, Mich.; Philo Morehouse, of Elkhart, Indiana; M. L. Sykes, Jr., of Chicago; Wm. Williams, of Buffalo.

At a subsequent meeting of the directors, Elisha M. Gilbert was elected President, and M. L. Sykes, Jr. Vice President.

What this election particularly signifies, and what is the policy to be pursued for the future, are not yet disclosed. The newly elected President is a veteran operator on the Stock Exchange, and was one of the leading spirits in the speculative movements in this stock two or three years since. Whether the present change in the direction has any meaning beyond a similar operation, remains to be seen. It was claimed by the old Board that the incoming one were in favor of cutting down the capital account of the road, including some of the classes of bonds. We do not know how this may be, but we hardly see how this can be done, unless under a foreclosure. The road is unquestionably worth its funded debt, but not much more. If the branches, or a part of them, could be sold, it would afford great relief to the company. We shall probably soon see some demonstrations on the part of the new board.

☞ We invite the attention of railroad men to the *Forester's Patent Day and Night Shifting Car Seat*, now on exhibition at the office of GILEAD A. SMITH, No. 207 Broadway. We understand that this seat has been in use for over a year past on the Orange and Alexandria and Virginia and Tennessee railroads, and that it has given general satisfaction.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 25th April, 1860, were as follows:

Montgomery and West Point Railroad.

At the annual meeting of the stockholders of this company, held at Montgomery, Ala., on the 16th inst., the following gentlemen were re-elected directors for the ensuing year:

President—CHARLES T. POLLARD.

Directors—Wm. Taylor, B. S. Bibb, Wm. M. Marks, Wm. B. S. Gilmer, John P. King, R. R. Cuyler.

The receipts of the company for the year ending March 1, 1860, were $505,156 20

Less expenses of operating and maintaining road $244,886 86

Interest 64,308 80

309,195 66

Leaving as net income $195,960 54

—or nearly 14 per cent. on the capital stock of the company.

During the year 119,872 passengers have passed over the road; and 59,425 bales of cotton. The business of the road, both in passenger and freight, is far in advance of previous years.

The stockholders authorized a subscription of $50,000 to the Montgomery and Selma road.

Stationery, Blank Books, etc.

We invite the attention of Railroad Companies, Bankers, Insurance Companies, etc., to the advertisement of CHARLES W. BLEECKER, in another column. Having a Bindery of his own, he is enabled to give his personal attention to orders, instead of being dependent, as many stationers are, upon others for their proper execution. Employing none but the most experienced workmen, he is confident that the books manufactured by him cannot be excelled in any particular, and at prices that cannot fail to be satisfactory. Several years' experience, and a thorough knowledge of the business enables him to offer superior inducements to parties wishing single, or full sets of books. Printing, lithographing and engraving neatly and promptly executed. Address Chas. W. Bleecker, Esq., 16 William st., New York.

Tennessee and Alabama R. R.

This road is now completed to Mount Pleasant, 11 miles from Columbia, Tenn. A charter has been obtained, with State aid of $10,000 to the mile, to extend it to Hamburg on the Tennessee river.

New Orleans and Jackson Railroad.

At the election for directors of this company recently held at New Orleans, the old board were unceremoniously ousted, and the following named gentlemen substituted: C. Fellows, M. O. H. Norton, P. N. Wood, Geo. Jones, C. Roselius, A. M. Holbrook, W. Bogart, Henry Florance, J. W. Carroll, H. W. Schwartz, Richard Easterbrook, H. J. Rhaney, Louisiana; Wm. McWillie, C. S. Tarpley, James Drame, Madison McAfee, James McAdory, L. E. Houston, Mississippi.

State Debt of Virginia.

The Petersburg *Intelligencer* gives the following as the present indebtedness of this State:

Public debt, as per Auditor's report, at close of last fiscal year	$31,452,159 62
General appropriations at late session, say	9,000,000 00
To James River and Kanawha Co..	2,700,000 00
Preferred stock in same, hereafter to be assumed	2,500,000 00
Previous appropriations uncalled for	3,300,000 00
Total State indebtedness	$48,552,159 62

Toledo, Logansport and Burlington R. R.

The election for directors of this company was held at Logansport on the 12th inst. The following gentleman were elected: D. M. Dunn, Wm. Chase, Logansport; W. Colburn, Toledo; J. B. Waring, Cleveland; Geo. Palmer, Buffalo; Samuel Gilman, Charles A. Secor, New York.

Debt of Alleghany Co., Pa.

The debt of this county on account of railroad subscriptions, is $2,300,000, on which there is due four years' interest, equal to $552,000. The county tax last year, without providing for railroad bond interest, was ten mills, and ten mills on the present county valuation will raise $250,000. Thus to meet the ordinary expenses of the county and provide for railroad interest over-due would require thirty-two and a-half mills, equal to three and a-half per cent. on their valuation for taxes. The city of Pittsburg has a funded railroad debt of $1,800,000, with back interest to the amount of $324,000. The *Journal* of that city says "the city must meet its share of thirty-two and a-half mills of county, twenty-seven mills of her own municipal expenses, and in addition, thirty-five mills for her own railroad debt, making ninety-four and a-half mills, or in round numbers, ten per cent."

Mobile and Great Northern Railroad.

At the annual meeting of the stockholders of this company held at Mobile, Ala., on the 13th inst., the following gentlemen were unanimously re-elected directors for the ensuing year: Wm. D. Dunn, Wm. Jones, Jr., N. St. John, J. A. M. Battle, R. A. Baker, L. M. Wilson, Jas. Boykin, and Lewis Troost. The annual reports of the President and Chief Engineer were submitted. The President's report gives a brief history of the enterprise from its commencement. From this we learn that the company was organized on the 11th of April, 1859. On the 19th of the same month the Directors ordered the preliminary surveys of the road to be made, which were completed in the month of October following. On the 1st of November the new act, supplemental to the act for taking the sense of the city upon the question of aiding this road, was submitted to the city authorities by the Mayor, was approved and forwarded to Montgomery and became a law, by the approval of the Governor, on the 29th of November. Meanwhile the stock subscriptions had been increased to upwards of $300,000, and the estimates of the cost of the road were reduced to $1,080,000.

Application was then made to the city authorities for aid to the amount of $1,000,000, and on the 13th of December the subject was brought by the Mayor, to the attention of the Aldermen and Council. On the 27th of December the contract, drawn up with the sanction of the committee appointed by the Board, having been adopted by both the city and the Railroad Company, was formally signed and executed.

On the 15th of January, contracts were made for the material portions of the work east of the Tensas river, to be completed by January 1, 1861; and on the 1st March all the bridge superstructure from the East bank of the Tensas to Mobile, was contracted for, to be completed in two years. On the 7th March, contracts were made for all the piers, rails, fastenings, etc., necessary for the road east of the Tensas, to be delivered at different periods from October, 1860, to July, 1861. The Directors have therefore provided for putting the road in operation from the Alabama and Florida road to the Tensas river in time for the crop of 1861, and into the city by about the 1st January, 1863. Calculations are based, however, upon the unimpaired credit of the company and the sale of the city bonds.

Three routes, it is stated, were surveyed for this road, the first extending from Mobile to the Alabama and Florida Railroad near Fort Crawford, the proposed junction of the Mobile and Girard Railroad; the second, connecting with the Alabama and Florida Railroad at Sparta, with a side line forming a junction with the same road at Evergreen; and the third route, running from Mobile to Midway and thence to the Alabama and Florida road at Greenville.

The first route was selected as being the shortest, cheapest, most eligible and affording the most and best connections with other roads. The Chief Engineer says:

A mere projected line would indicate the latter as the point of junction with the Alabama and Florida Railroad, but when the fact was so patent, that all the requirements of either the city of Mobile or the public could be met by a connection at Fort Crawford, at an immense saving of money and time, the terminus was easily fixed.

Had there been a local business commensurate with the heavy expenditure necessary to make a connection north of the present one, the location might have been different; but the absence of all local advantages fully confirms the policy of the present location. The Fort Crawford line being fixed upon, a locating party was organized December 1st, and put into the field, and the location perfected to the east bank of the Tensas river, forty-nine miles, in six weeks. The general direction of the line for the first thirty miles is indicated by the Florida State line, as the line of road follows immediately along the State line, approaching it at points within one quarter of a mile till the crossing of the Perdido, where the course changes to the south-west, direct for Mobile, crossing the Tensas and Mobile rivers, about half way between Hall's and Byrne's landings. The country over the entire distance is high and dry, densely timbered with the finest long leaf yellow pine, and interspered with hundreds of never-failing springs and streams of pure, healthy water. A more minute description of the line would be unnecessary, because possessed of neither landmarks nor localities familiar to the stockholders of your company.

The location from the east bank of the Tensas into the city of Mobile is yet incomplete—the crossing of the Tensas and Mobile rivers only having been fixed. A party is at present engaged upon this work, and as it is the only portion of the line presenting any difficulty, I feel that too much time can scarcely be spent upon it—the present cost, as well as the ultimate working expenses of the road, being greatly dependent upon a judicious location of this section of your road.

Great fears had long been entertained of the total impractibility of a line crossing the delta, owing to the depth of water and character of marsh and swamp, rendering foundations expensive and doubtful; recent surveys have relieved all doubts upon this subject. The crossing of both the Tensas and Mobile rivers are favorable, having water varying from five to twenty-seven feet and a compact sand and clay bottom.

The remainder of the line is over a well-timbered section of country; and although a portion of it is subject to overflow and will not supply the necessary material for embankment, yet the surface is generally sufficiently firm to support the material that can be conveniently hauled in from the cuts east of the Tensas.

The absence of materials ordinarily used in the

construction of bridge piers, created the necessity of a thorough investigation of all the plans resorted to in Europe and our own country, for the support of bridge superstructures, and a careful comparison of their respective cost. The first cost of timber piers was materially less than any other; but in a Southern climate like our own, where decay is so rapid, aided by the destructive influence of the *teredo navalis* or sea-worm, its use would have been both hazardous and expensive in the end.

Iron being left as the only available material for meeting the difficulties presented in the our case, a careful investigation was instituted of the respective merits of pneumatic cylinders and screw piles.

The latter presented many admirable features, being easily put in, and when once erected, offered little or no resistance to the current of the river; but the depth of water, height of superstructure, and severe gales, rendered the piers top heavy and liable to great vibration; and independent of the above, they were more expensive than the pneumatic cylinders.

The cylinders was finally determined upon as the cheapest and least objectionable of all the known plans, and one eminently suited to our wants. The success of this class of bridge pier, in both Europe and America, gives entire confidence in their adoption.

The cast iron cylinder possesses many advantages over all other plans of bridge piers. The location of your bridge is at points where the water is but slightly affected by the salt of that of the bay; and even if it were doubly so, and the action equal to the maximum of metallic destruction, the material presented to this action would render the piers perfectly safe for the duty they would have to perform a century from this time. Independent of this fact, these cylinders are filled with the best concrete, and whilst the cylinders may be losing something by metallic decomposition, it is compensated in an equal ratio by the gradual hardening of the concrete, a substance that will, in a few years, attain to a hardness quite equal to good building stone. The screw pile pier is without the above advantage. The chemical action of the water upon the screw pile is rapid and permanent, without a compensating medium of protection. A contract for the cylinders was closed on the 7th day of March with Messrs. John Rogerson & Co., of Newcastle-on-Tyne, England, and the plans are now on their way to the manufacturer. Should there be no disappointments in the delivery of the cylinders, the operation of sinking them will begin the first of October next. The superstructure for these bridges will be upon the Howe Truss plan, with large revolving draws, for both the Tensas and Mobile river bridges. These bridges have been let to Messrs. Denmead & Kendrick, of Marietta, Ga., men eminently able to carry out the terms of the contract.

The cost of the entire road into the city of Mobile is summed up in detail in the following table, which, for convenience of future reference, I have divided into two divisions—Eastern and Western. The eastern division, extending from the Alabama and Florida Railroad to the east bank of the Tensas river, forty-nine miles long; the western division, from the east bank of the Tensas river to the city of Mobile, is eighteen miles long.

EASTERN DIVISION.

Clearing, grading, masonry and bridging	$420,100
Superstructure	409,600
Buildings	74,500
Equipment	140,000
General expenses and engineering	50,000
Total	$1,094,200

WESTERN DIVISION.

Clearing, grading, masonry and bridging	$451,000
Superstructure	124,300
Buildings	45,500
Equipment	60,000
General expenses and engineering	25,000
Total	$705,800

RECAPITULATION—EASTERN AND WESTERN DIVISION.

Clearing, grading, masonry and bridging	$871,100
Superstructure	533,900
Buildings	120,000
Equipment	200,000
General expenses and engineering	75,000
Total	$1,800,000

It is confidently believed that the above sum will be ample to cover the cost of the entire road.

The progress that is being made on every portion of the line, with the clearing, grading and cross-ties, will enable us to begin our track-laying early in the coming fall of the Tensas and Alabama and Florida Railroads; and should no unforeseen occurrence delay the work, we may safely expect to see the line opened through the Tensas, in time to take off the crop of sixty-one.

The receipts of the company up to April 2d, have been, from instalments on stock subscriptions, $36,646; from sale of city bonds, $79,664.64; total, $116,310.40. The expenditures up to the same time were, $84,280.16, leaving a balance in the treasury of $32,080.24. Bonds of the city have been received to the amount of one million of dollars. Seventy-nine bonds have been sold at par; eighty-four have been sent, and thirty more are to be sent, to London to John Rogerson & Co. on contract for rails and iron work for bridges, piers, etc., making ninety-three bonds in all disposed of, and leaving eight hundred and seven in the possession of the company.

The officers of the company are:

WM. D. DUNN, *President.*

G. JORDAN, JR., *Chief Engineer.*

S. W. ALLEN, *Treasurer.*

Railroad Earnings.

The earnings of the Cincinnati, Hamilton and Dayton Railroad for March, 1860, were $60,203 10
March, 1859 ..... 47,060 70

Increase $13,142 40

The earnings for the year ending March 31, 1860, were $561,682 52
Do. 1859 ..... 489,437 92

Increase $72,248 60

The net earnings for 6 months to March 31, 1860, were $87,481 58
Less 3½ per cent. dividend 75,453 00

Surplus $12,028 58

The earnings of the Norwich and Worcester Railroad for March were:

1860 ..... $27,801 30
1859 ..... 25,864 66

Increase $1,936 64

The receipts of the Grand Trunk Railway of Canada, for the week ending April 7th, 1860, were $70,160 70
Corresponding week, 1859 ..... 49,068 19

Increase $21,092 51

Total traffic from July 1, 1859 ..... $2,199,758 60
Do. for same period last y.. 1,762,597 49

Increase $437 161 11

The receipts of the Grand Trunk Railway of Canada for the week ending April 14, were $70,858 89
Week ending April 16, 1859 ..... 46,963 46

Increase $23,895 43

Total traffic from July 1st, 1859 ..... $2,270,617 49
Same period last year 1,809,560 95

Increase $461,056 54

The officers of the Western and Atlantic Railroad have paid into the State Treasury of Georgia, $40,000, the net earnings of the road for the month of March.

The following statement shows the business of the Philadelphia and Reading Railroad Company for the month of March:

	1860.	1859.
Received from coal	$169,808 48	$109,972 04
Do. merchandise.	57,608 80	47,978 98
Do. travel, etc.	29,992 29	30,657 79
	$257,409 57	$188,608 81
Transportation, roadway, dumpage, renewal Fund, and all charges	134,043 71	109,030 89
Net profit for the m'th.	$123,365 86	$79,577 92
Do. for previous 3 mos.	221,029 80	216,382 05
Total net profit for 4 months	$344,395 66	$295,959 97

The earnings of the Eastern Division of the Ohio and Mississippi Railroad for March were:

1860 ..... $94,392 55
1859 ..... 89,264 18

Increase $5,128 37

The earnings of the New York Central Railroad have been as follows:

	1858-9.	1859 60.	Increase.
December.	$510,424 64	$520,896 27	$9,971 63
January ..	380,348 68	387,128 14	6,779 46
February .	370,544 36	402,530 38	31,986 02
March	509,210 54	554,339 33	45,128 79

The earnings of the Mobile and Ohio Railroad have been:

	1860.	1859.	Increase.
February	$118,435	$70,391	$48,044
March	100,494	51,544	48,950

The earnings of the Central Ohio Railroad for

February were $46,900 49
Expenses 35,051 19

$11,849 30
Balance on hand $22,535 17
Due other roads 16,204 23
Due from other roads 17,701 59

The receipts and expenses of the road for the past six months has been as follows:

	Receipts.	Expenses.
September	$66,460 25	$38,640 92
October	53,092 78	44,950 37
November.	49,569 24	39,441 19
December	43,907 10	43,103 05
January	41,946 07	40,888 21
February	46,900 42	35,951 19

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.
New York, March 29, 1860.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held this day, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, be, and the same is hereby called, payable on the 15th day of May, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. ROBERT BENSON & Co.; and that parties desiring to pay their instalments in London, may pay the same, at the rate of four shillings two pence sterling to the dollar.

Resolved, That the Transfer Books be closed on the 10th day of May, and re-opened on the 15th, and that no transfers be permitted after that date, of shares upon which such assessments shall not have been paid.

Resolved, That interest at the rate of seven per cent. per annum be allowed upon all assessments paid previous to the 15th of May, and charged at the same rate upon all assessments paid after that date. By order of the Board.

A. E. BURNSIDE, Treasurer.

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.
It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.
I will send a Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.
Prices exceedingly moderate.
All orders and communications will receive prompt attention. Send for a circular.
Address **CHARLES T. PORTER, Patentee and Manufacturer,**
235 West 13th St., NEW YORK CITY.
A few reliable Agents wanted.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

The holders of the Bonds of this Company, due July 1, 1860, can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.
The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting, held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.
The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.
A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.
Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.
2m15 W. H. MOLLHENNY, Secretary.

Gold, Silver and Lead Ores.

THIS COMPANY ARE PREPARED TO PURCHASE OR RECEIVE ON CONSIGNMENT the above Ores on as favorable terms as can be obtained in this country or in Europe.

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans, Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
163 West 38th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

THE IMPERIAL LUBRICATING OIL,

MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads, Machine Shops, Steamships, Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!

PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST.,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Victoria Bridge.

(Continued from p. 347.)

In order to see how the wooden truss will compare with the tube in respect to proportion of superfluous to effective material, I will take a Bridge of the McCallum plan, as designed for a span of 242 feet in the clear. In choosing this particular discription of girder as a standard, I do not wish to be considered as expressing any opinion in its favor as compared with other descriptions of wooden girders; but it is taken simply because the details for such a comparison are more readily at hand; and as the McCallum girder does not depend upon iron rods, but *entirely upon wood*, the issue presented as to the relative merits of wood and iron is more complete. The amount of material in such a Bridge is as follows:

	ft. B. M.	lbs.
Top ch'ds and straining beams	22,292	53,853
Keys	912	2,204
Lateral bracing and ties	4,794	11,585
Lateral bolts		448
Bolts for splicing &c		2,825
Total weight in top		70,415

—or 35.2 tons.

	ft. B. M.	lbs.
Bottom chords	18,806	45,448
Clamps and keys	5,035	14,100
Lateral bracing	1,964	4,746
do rods, bolts and shoes		1,980
Bolts for splicing		4,764
Total weight in bottom		71,038

—or 35.5 tons.

	ft. B. M.	lbs.
Braces in sides	26,883	66,000
Arch braces	4,096	9,000
Vertical ties	25,204	60,909
Bolts &c		3,517
Total weight in sides		140,326

—or 70.1 tons.

Making the total weight of bridge 140.8 tons.

The floor timbers and track would add as follows:

	ft. B. M.	lbs.
Floor timbers and stringers	21,435	53,500
Bolts &c		678
Rails, chairs, spikes &c.		10,462
Total		64,640

=to 32.3 tons.

The total weight of Bridge and Track would therefore be 173.1 tons against 305 tons, which is the weight of one span of the Victoria tube and track.

The superfluous or non effective material in the Wooden Bridge made necessary by the framing is, as given below, and in this category I will include the lateral bracing top and bottom, as it is claimed that in the tube nothing extra is required for this duty.

Superfluous material in the top.

	lbs.
Keys	2,204
Lateral bracing and ties	11,585
Lateral bolts	448
Bolts for splicing chords	2,325
Total	16,562

=to 8.28 tons—

Superfluous material in the bottom.

Clamps and keys	14,100 lbs.
Lateral bracing	4,746 "
Do. rods, bolts and shoes	1,980 "
Splicing bolts, etc.	4,764 "
The total area of the lower chord is 465 inches, 300 of which is available, leaving 165 non-effective	16,891 "
Total	41,981 lbs.

= to 20.99 tons.

Superfluous material in the sides.

Reduction of vertical ties in framing	24,363 lbs.
Bolts, etc.	3,517 "
Total	27,880 lbs.

= to 13.94 tons.

The comparison would stand as follows:

	In the tubes.			In the wooden bridge.		
	Effective material.	Material superfluous.	Total weight tubes.	Effective material.	Superfluous material.	Tot. w'ght wood. br.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Top	64.6	11.4	76.0	26.9	8.3	35.2
Bottom	64.4	27.6	92.0	14.5	21.0	35.5
Sides	23.6	50.4	74.0	56.2	13.9	70.1
Totals	152.6	89.4	242.0	97.6	43.2	140.8

The superfluous material therefore is 38 per cent. of the whole in the tubes, while in the wooden bridge it is only about 30 per cent., and this comparison is made on the assumption that the material through the centre of the top and bottom of the tube is effective for longitudinal strains.

It may fairly then be assumed, that as regards the superfluous material, the wooden structure loses nothing in the comparison, and that it fulfills the *second* condition necessary in a proper structure quite as well as the boiler plate bridge.

As regards the distribution of the material, the same arguments apply here as in the case of the iron lattice, viz: that the material subject to the strains of extension and compression, is condensed into a small compass, *directly where these strains are communicated*, and that it is in the best possible form to resist these strains. It would appear, therefore, that a well constructed wooden bridge meets the *third* condition.

A comparison of the *strength* of the McCallum girder as designed for a span of 242 feet, with the Victoria tube, will not I think offset the advantages already enumerated.

The weight of a McCallum girder of 242 feet span in the clear, with its track and a rolling load of one ton per foot, is 410 tons; and the strains of compression and extension at the centre of one of the chords due to this load uniformly distribut-

ed, is 413,417 lbs. The whole area of the upper chord, 492 inches, being effective, the strain per square inch is 840 pounds. The maximum value being 5,500 pounds per square inch, the factor of safety is about 6.55.

The section of the lower chord has 300 square inches fully available for tension, and the strain is, therefore, 1.378 pounds per square inch.

The maximum value being 12,000 lbs., the factor of safety is 8.7.

The following table gives a comprehensive view of the relative characteristics of one of the Victoria tubes and a McCallum girder of same span, as regards weight, strength and cost.

	Victoria tube.	McCallum girder.
Relative strength of same weight of material to resist compression.....	1	3.06
Do. do. to resist tension,	1	5.30
Weight of effective material	152.6 tons.	97.6 tons.
Do. of non-effective do.	89.4 "	43.2 "
Total weight of girder....	275.0 "	140.8 "
Least factor of safety.....	3.7 "	6.55 "
Cost per foot	£57	£8.

In these various features then, the wooden girder has these advantages viz:

1st. The material has more than three times the value with equal weights to resist compression.

2nd. It has more than 5 times the value with equal weights to resist tension.

3rd. The proportion of superfluous or non-effective material, to effective material is 1-5th less.

4th. The total weight of bridge is only about one-half.

5th. The factor of safety is nearly double; and

6th. The cost is only about one seventh.

Surely here are large margins, so large, indeed, that it is not at all necessary to be over nice in the comparisons. In fact, the girder with which I have here compared the Victoria tube with, only one-half the weight of material has nearly twice the strength.

One peculiarity in the construction of the McCallum girders is what is called the *arch* brace. These are heavy timbers extending from the upper corners of the masonry of the piers and abutments, passing through the lower chords, and between the side braces and abutting against the upper chords and straining beams at a point about 36 feet out from the bearings—in effect shortening the span of 242 feet to 170. The strains have been calculated, however, without any reference to the service these braces perform, and the results given are such as would be due to the entire span. Between the points of support afforded by these braces, the bridge, with the track and rolling load of one ton to the foot, would weigh about 300 tons uniformly distributed, and the strain upon each chord due to this span and this load, would be but 212,500 pounds—or, but little more than one-half the strain allowed in the comparison.

Our "perishable" American bridges need but a fair examination to establish their superiority over the tubes at least, in every respect, except as regards their maintenance. This question is purely a financial one, and is to be considered in connection with the first cost. Experience has shown that a well constructed wooden bridge, properly covered and protected, will last at least 20 years. In the eport of the President and Chief Engineer of the New York and Erie Railroad Company for the year 1857, a complete schedule of all the bridges on the road is given, at the end of which, S. S. Post, Esq., the Chief Engineer, whose experience entitles his opinion to the utmost confidence, remarks in relation to the bridges I have quoted, and to others upon that road: "These bridges are of the first class. * * * They have been constructed in the most substantial manner, from the best of materials, and remain in every respect sound and in perfect condition. * * * If kept properly painted, these bridges will unquestionably, with very little other repair, perform their offices well, and with perfect safety, *for 20 years or more.*"

It must be remarked that too little attention has been given to the necessity of covering and protecting our wooden bridges; and to this, must be attributed their comparntively short life. Those recently constructed on the Grand Trunk Railway under the direction of Mr. Starke, have, however, had the utmost care bestowed upon them in this respect, and it is believed that the precautions he has taken will give them a durability heretofore unknown. Tubes are yet too new to determine what effect time and corrosion may have on them. It is certain that they require constant repairs and constant painting. It is stated that the Grand Trunk Company pay at the rate of 80 cents per foot per annum for the painting of the Victoria tubes.

The difference of first cost between the tubes and wooden girders for the Victoria bridge would not have been less than £45 per foot, making every allowance for necessary staging for raising the bridge, for thoroughly planing and painting, and then covering it. With such precautions, 25 years may be considered as a very low estimate of its durability; but, I will assume 20 years as the extent, and offset the annual cost of repairs and painting, by the amount which it costs to paint the Victoria bridge; although this amount is at least twice the sum required for the wooden structure. I will also assume the tube to be imperishable. We have then simply to consider the difference in first cost, and compute the interest for 20 years. Sixty-six hundred feet, at £45 per foot, (the difference,) is £297,000. The interest on this, at 6 per cent., is £17,820 per annum. Without compounding it, as we might very properly do, the interest for 20 years is £356,400. Now the first cost of the wooden bridge, at the very high valuation I have allowed, is £79,200. The interest on the difference of cost would, therefore, rebuild the wooden bridge four and a half times during the 20 years.

Great stress has been laid upon the risk from fire, involved in the use of wooden bridges. It is not simply the value of the bridge itself, and the cost of its reconstruction, which is to be considered, but the delay to the traffic of the road, consequent upon its *unexpected* destruction. When reconstruction becomes necessary from natural decay, it can be accomplished without the stoppage of a single train, as has been proved in the rebuilding of hundreds. Now the value of the risk is precisely what it will cost to avoid it. Without discussing a dozen cheap expedients of construction, which would reduce the risk so as to be inappreciable, it is quite certain that it can be done by watching, if by no other process. A watchman at each end of a bridge of the length of the Victoria tube, whose duty it should be to pass to the centre immediately after the passage of any train, would render its burning impossible. Allowing for such a patrol night and day, the cost would not exceed £300 per annum. If we capitalize this sum, at 6 per cent., we shall find that it only calls for an investment of £5,000. If, therefore, a sum less than a ponnd per foot will render a wooden bridge indestructible from fire, it would seem to be poor economy to spend £45 per foot for that purpose.

The statistics of our American railroads, however, show that without very special provisions, the risk to wooden bridges from fire is less than for almost any other species of property. On the New York and Erie Railroad there are 146 distinct wooden truss bridges ranging from 40 feet to 792 feet in length each. During the past nine years there has been but one bridge destroyed by fire, and this too without any special protection.

Unquestionably, a lining of tin or sheet iron, adding but a small per centage to the cost, would be as perfect a protection where the trains pass between the trusses, as though the whole structure was of iron. Where trains pass over the top, it is always customary to cover them in this way. It is a mere question of cost, and when so small an addition will accomplish the object, there is no reason for the assertion that, to avoid risk from fire, the whole frame-work must be of iron, for it can be done at far less expense.

All the various elements involved in the comparisons made between the different descriptions of girders which have been considered, after all bring us down to the true criterion of pounds, shillings and pence. This is the inevitable standard, and although it may for a time be evaded, and kept out of sight in the mist of all these disquisitions; yet, practical men who provide the means for such constructions, whenever they can understand that the question of strength is disposed of, without disadvantage to the low-priced structure, will then ask the question: Which is cheapest in the *long run?*—and it is by a fair solution of this problem, that the merits of the structures are to be decided.

Assuming that the tubular plan is everything that could be desired in every respect for the Victoria bridge, it is a question whether proper economy has been exercised in the arrangement of the spans. It is a maxim in such work, (provided the plan of superstructure adopted will permit the required spans,) that unless there are special features existing in the stream, fixing the abutments and piers at particular places, as in the case of the Britannia bridge, the point of economy is reached only when the cost of the piers and the cost of the superstructure balance each other. In the case of the Victoria bridge, the piers cost twice as much as the tubes, yet Mr. Ross, in his report, seriously asserts that the most economical arrangement has been adopted, and that to have lengthened the spans, so as to have reduced them one in number only, on each side of the centre span, would have increased the cost about £30,000. A few figures will render any comment or argument upon such an assertion unnecessary.

The piers cost £800,000, according to Mr. Ross, which is an average of £33,333 each. To have made one less opening on each side of the centre, would, therefore, have reduced the cost of the

piers £66,666. It would have increased the length of each span from 242 to 264 feet, and increased their weight as the squares of the span, making each span, including the bearings, weigh 321 tons, or 1.15 tons per foot. The present spans weigh 275 tons each, or 1.07 per foot. The cost per foot would, therefore, be increased from £57 to £61 5s., increasing the total cost of the superstructure about £26,300 only. Deducting this from the saving to be made by dispensing with two piers, and the result is that instead of the bridge costing £30,000 more, as Mr. Ross says, it would have cost more than £40,000 *less*, and the cost would have stood:

For the piers	£733,333
" superstructure	426,300
Total	£1,159,633

—instead of £1,200,000.

Now let this same process be repeated with a still less number of spans, and as the cost of piers and superstructure approach an equality, as they must necessarily, it will be seen that the aggregate of both will *decrease*. Let us, for instance, suppose the spans to be reduced to nine on each side of the centre opening.

This would reduce the number of piers—six making a saving of £200,000. The length of each span in the clear would be increased from 242 to 331 feet. The weight of each span would be increased to 486 tons. The average weight per foot, including bearings, would, therefore, be 1.4 tons. The price per foot would be increased to £74 10s. The total cost of superstructure would be increased to £461,900
While the piers would be reduced to 600,000
Total cost £1,061,900

—instead of £1,200,000.

The lowest aggregate is reached only when the two sums are alike, and this point will not be found with piers at £33,333 each, and tubes at £54 per ton, until we have reached spans of over 350 feet, and the total saving would, in that case, be about £200,000.

By what possible calculation Mr. Ross could have arrived at the conclusion he did, it is difficult to see.

Mr. Liddell, in his report, says:

"Mr. Ross' calculation of the size of the spans in relation to the piers, is really amusing. As positively as we can demonstrate, that to divide a given line into two parts, such that their products may be a maximum, the two parts must be equal; so positively can it be shown, that until the cost of the superstructure balances the cost of the piers the most *economical proportion* has not been arrived at. Mr. Ross, however, proves to *his own* satisfaction, that although the piers are estimated to cost £800,000, and the superstructure £400,000, we cannot increase the spans and diminish the number of piers without a loss!! Mr. Brunel has given a juster estimate of this, and it is no doubt founded on the relative amounts of superstructure and piers given him."

(To be continued.)

Texas and New Orleans Railroad.

The Galveston *News*, of the 15th April, says that Messrs. C. L. Wentz & Co., contractors of the Texas and New Orleans Railroad, have already completed twenty-five miles of their track from Beaumont, and expect to be through to Liberty by the 15th of May. They intend soon to put on a force at Houston, to work eastward, and hope thereby to lay the entire Texas division by the 1st of August.

Ohio and Mississippi Railroad.

Below we give the first report of J. W. Alsop, Esq., Receiver of this road. The report represents that it is necessary for the successful operation of the road, that out of the receipts of the road, after paying current expenses, there be paid the proper and legal taxes and assessments on the property of the company, and the rents and balances due and to become due to other companies, and for injuries to cattle along the line and to property transported by the company, as well as amounts due and to become due under contracts for the use of rolling stock by the company; also interest on the first mortgage bonds. Authority was granted to the Receiver by the Court to discharge liabilities as suggested by him.

LIABILITIES.

Liabilities of the Eastern Division, as far as ascertained, to April 9, 1860:

Capital stock		$6,478,854 00
Loan from Cincinnati		600,000 00
1st mort. bonds, due July 1, 1872		2,050,000 00
Coupons of inter't unp'd from Jan. 1, 1858, to Jan. 1, 1860.	$206,045 00	
Interest on coupons to April 1, 1860	12,364 55	
		218,409 55
2d mort. bonds, due Oct. 1, 1860		258,000 00
Coupons of interest unpaid to April 1, 1860	$84,980 00	
Interest on coupons to April 1, 1860	10,744 10	
		95,734 10
Construction bonds, due March 1, 1876		4,242,000 00
Coupons of interest unpaid from September 1, 1857, to March 1, 1860	$742,350 00	
Interest on coupons to April 1, 1860	47,513 38	
		789,863 38
Income bonds, due May 1, 1881		3,320,000 00
Coupons of interest unpaid from November 1, 1857, to May 1, 1860	$581,000 00	
Interest on coupons to April 1, 1860	32,535 16	
		613,535 16

THE RECEIVER AUTHORIZED TO BORROW MONEY.

In addition to the authority given to the Receiver to discharge certain liabilities, as suggested in the report, the Court also entered a decree, authorizing him to borrow money in the name of the company, to anticipate the reasonable, reliable receipts of the road, to enable the Receiver to meet promptly existing engagements, he being required to report to the Court the amount so borrowed, and the time the loan has to run.

Indiana and Illinois Central Railroad.

It is stated that work is to be commenced on the Indiana and Illinois Central Road, from Indianapolis to Decatur, Ill., and that operations will be steadily prosecuted until the road is completed.

Journal of Insurance Law.

CONTRACT OF INSURANCE, AGREEMENT TO INSURE BINDING.

The case we are about to consider grew out of the burning of the ship 'Great Republic' at its wharf in the city of New York, and was a re-insurance upon that vessel. The Union Mutual Insurance Company of New York, having made insurance of the ship to a large amount, authorized Charles W. Storey, at Boston to apply for and obtain from either of the insurance companies there, re-insurance to the extent of ten thousand dollars.

Pursuant to this authority, on the 24th December 1853. Mr. Storey made application to the president of the Commercial Mutual Marine Insurance Company for insurance at the same time presenting a paper, partly written and partly printed, as embodying the terms of the application. The paper was as follows: "Re-insurance is wanted by the Union Mutual Insurance Company, New York, for $10,000, on the ship Great Republic, from Dec. 24, 1853, at noon, for six months ensuing."

"This policy is to be subject to such risks, valuations and conditions including risk of premium note, as are or may be taken by the said Union Mutual Insurance Co., and payment of loss to be made at the same time, 3 per cent."

The president, after consultation with one of the directors of the company, declined to take the risk for a premium of three per cent., but offered to take it for three and a-half per cent. Mr. Storey replied, that was more than he was authorized to give, and left the office.

Mr. Storey immediately apprised his principals, by a telegraphic dispatch, that the risk could be taken for three and a half per cent. for six months, or six per cent. a year. The reply on the same day was: "Do it for six months, privilege of cancelling if sold." This reply did not come to the hands of Mr. Storey until Monday, the 26th day of December, when he went to the office of the respondents, and found there the president of the company, but no other person, as the day was generally observed as a holyday, Christmas having fallen on Sunday. He then informed the president that he would give the additional half per cent and altered the 3 to 3½ on the paper. To this proposal the president assented and retained the paper.

The defendants answered to this that "its president did assent to the terms and provisions of a re-insurance to be completed and executed by this defendant, by the making and execution of a policy in due form, according to the requisitions of the laws of Massachusetts, the by-laws of this defendant, but they were not assented to as a present insurance."

The case was first tried at the Circuit court for the district of Massachusetts, from which it was appealed to the Supreme Court. We give the opinion of the appelate Court upon the point of an agreement to re-insure as distinguished from the insurance itself.

CURTIS, J.—Upon these facts, we are of opinion there was an agreement to re-insure according to the terms contained in the proposal, concluded by and between Mr. Storey and the president at the interview on Monday the 26th of December. The paper contained every particular essential to a contract to make re-insurance. It ascertained the subject of insurance, the commencement and duration of the risk, the parties, the interest of the assured, and the premium; and for the special risks, the valuations and conditions, it referred to the original contract of insurance made by the complainants, by reason of which they were seeking re-insurance.

On Saturday, the president had offered to contract in accordance with the paper, saving a difference of one-half per cent. on the premium.

It was argued that it could not be considered an acceptance, on Monday, of a continuing offer made on Saturday, because, when the complainants authorized Mr. Storey to give three and a half per cent., they at the same time imposed a new condition by the words, "privilege of canceling if sold," but Mr. Storey testifies, and this is not denied by the answer, or by any witness, that when he made the application on Saturday, and before the president had named the premium which he was willing to take, the president said he supposed that they would have to cancel the policy, if the vessel should be sold within the time, and that he (Storey) assented thereto; and that at the interview on Monday when this point was referred to, the president said the usage in Boston would settle it, and he would not put any thing concerning it into the policy; and after some conversation concerning the usage, Mr. Storey agreed to take the policy without any mention of the privilege of cancellation.

Under these circumstances we do not perceive that the requirement of this privilege can be considered as at all varying, in the apprehension and meaning of the parties, the terms of the accept ance on Monday, from the terms of the proposal on Saturday. But whether, under all the circumstances, this should be deemed to have been a continuing offer, we do not think it necessary to determine; because, on Monday, either the president's offer of Saturday was accepted by Mr. Storey and its acceptance made known to the president, or the proposal was renewed by Mr. Storey, and accepted by the president. The fact that others chose to abstain from business on that day, did not prevent these parties from contracting, if they saw fit to do so; and when one of them either accepted a continuing offer, or renewed a proposal which was accepted by the other, they made a binding contract. Nor do we think the allegation of the answer, that the president informed Mr. Storey that no business was done in the office that day, but the next day he would attend to it, can reasonably be interpreted to mean that he had not made, or intended to make a contract for a policy. Their fair meaning is, that though he had agreed to make the insurance, as the secretary and clerks were not there, and the books not accessible, any action on the agreement must be deferred to the next day. The words cannot be understood to mean, that he would on the next day attend to what he had already done; and he had already made a contract for re-insurance, to be executed on the next day, by issuing a policy in due form to carry that agreement into effect.

On leaving the office of the defendants, Mr. Storey immediately informed the plaintiffs that he had effected this contract, and on the night of the same day the ship Great Republic was destroyed by fire, while laying at a wharf in the city of New York. On the 27th day of December, the complainants tendered their notes for the agreed premium and demanded the policy of re-insurance. The defendants declined to make the policy. Several grounds have been insisted on in support of this refusal:

The first is, that by force of a statute of the State of Massachusetts, insurance corporations can make valid policies of insurance only by having them signed by the president and countersigned by the secretary. But we are of opinion that this statute only directs the formal mode of signing policies, and has no application to agreements to make insurance.

It is further insisted, that by the law merchant insurance can be effected only by a contract in writing. We do not doubt that the commercial law of all countries has treated insurance as made in writing by an instrument, denominated by us a policy; and there may be provisions of positive law in some countries, requiring an agreement to make a policy to be in writing. But there is no such statute of frauds in the State of Massachusetts. The common law must therefore determine the question; and under that law, a promise for a valuable consideration to make a policy of insurance is no more required to be in writing than a promise to execute and deliver a bond, or a bill of exchange, or a negotiable note.

The points taken by the defendants that their president had no authority to enter into an oral contract binding the company to make insurance, and that the premium note should have been actually signed and delivered, were each overruled and the judgment of the Circuit Court affirmed.

Central Railroad of New Jersey.

The following is a comparative statement of the receipts, expenses and net earnings of the three months ending March 31st, of the present year, with the same months of last year:

RECEIPTS.	1860.	1859.	Increase.
January..	$75,105 33	$61,145 27	$13,960 06

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, May 5, 1860.

Railroads in New York.

We give in another column a statement, the first of a series, showing the share capital, debts, costs. earnings, etc., etc., of the Railroads of New York, commencing with the roads first opened, to be brought down to the present time. Having the means of presenting an historical view of the roads of the State, we believe we cannot fill our columns with more valuable matter, for one of the surest tests of present value of a road is its past history.

Milwaukee and Mississippi Railroad.

The committee of bondholders of this company have recommended the adoption of the following plan for the re-organization of this company. The plan is substantially as follows:

First mortg. on 1st section, 8 per cent.	$600,000
First mortg. on 2d section, 8 per cent.	647,000
Mortgage to Waukesha, 10 per cent.	74,000
Total	$1,321,000

The foregoing and accrued interest may be converted into 8 per cent. first preferred stock, or receive new sheets of coupons, at the option of the holders, running 10 or 15 years, bearing 8 per cent.

First mortg. on 3d section, 8 per cent.	$2,037,000
First mortg. on Southern Wisconsin, 8 per cent.	346,000
Total	$1,383,000

The holders of the foregoing are to receive 8 per cent. first preferred stock for the principal and accrued interest, and, with the holders of the Second mortgages, as stated below, may take the control of the road.

Second mortgage 10 per cent. bonds	$600,000

The holders of the above are to receive Second preferred 8 per cent. stock for principal and interest, and, with the first preferred stockholders, will manage the road, elect directors, etc.

Second mortg. on the Southern Wisconsin Line to the city of Milwaukee is	$300,000
Third mortgage on the whole line, 7 and 8 per cent.	395,750
Total	$695,750

The above, with accrued interest, to be converted into Third Preferred 7 per cent stock. A fourth class of stock, called Common stock, to be issued in discharge of all the stock now outstanding, and including Farm Mortgages unsecured indebtedness against the road. Under this organization, as authorized by a late law of the State of Wisconsin, the income of the road is to be appropriated as follows:

First: Pay running expenses.

Second: Pay interest on mortgages outstanding.

Third: Pay 8 per cent. on first preferred stock.

Fourth: Pay 8 per cent. on second preferred stock.

Fifth: Pay 7 per cent. on third preferred stock.

Sixth: The surplus, if any, to be employed in sinking the preferred stock to three millions, or until its value has reached par in New York.

Seventh: Whenever these conditions are reached, the surplus shall be invested in the purchase of the common stock, until the whole capital stock, both preferred and common, shall be reduced to six millions.

Eighth: When the capital stock shall have been reduced to six millions of dollars, and the road shall have earned a dividend on that amount in any one year, equal to 7 per cent. dividends shall be declared on all the stock, instead of sinking the shares.

Notices of Books.

"STRENGTH OF MATERIALS." By J. K. WHILDIN, C. E., Washington, D. C.; pp. 62, octavo. D. Van Nostrand, 192 Broadway, New York.

This is a small volume, compiling, in a convenient form for reference, the results of various experiments on the strength of materials, the records of which have heretofore been so scattered as not always to be obtainable. It contains many useful tables and formula from both old and new experiments, and the authorities are given. It is illustrated by diagrams and cuts. We hope this is but the beginning of a comprehensive collection of such data, for nothing is more required by the engineer and the mechanic, than a thorough "aide memoire" of this kind. The publisher's advertisement will be found in our advertising columns.

Michigan Southern and Northern Indian Railroad.

The following is a correct list of the new board of directors elected on the 25th ult.

Albert Havemeyer, Allan Campbell, Jonathan H. Ransom, Henry Keep, Milton Courtright, New York; Elisha M. Gilbert, Utica; Hamilton White, Syracuse; Nelson Beardsley, Auburn; William Williams, Buffalo; Stillman Witt, Cleveland; John S. Barry, Constantine Michigan; Philo Morehouse, Elkhart, Ind.; Martine L. Sykes, jr., Chicago.

The above are mostly new members. At a subsequent meeting of the new Board of Directors, E. M. Gilbert was chosen President, and M. L. Sykes Vice-President. J. D. Campbell was re-appointed Superintendent.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 2nd May, 1860, were as follows:

	Th. 26.	F. 27.	Sat. 28.	M. 30.	Tu. 2.	W. 2.

New Invention in Street Railways!!!

We took occasion a few weeks ago to call attention to a remarkable and characteristic discovery made by the *Railway Review*, viz: that a car, having wheels of unequal diameter, on the same axle, would be an improvement on one having wheels of the same size, (see article in *Railway Review* of Feb. 16th, headed, "Bartholomew's Reversible City Rail,") and we proposed to join in the exultation consequent upon the invention of so wonderful a contrivance for—*getting off the track*. Our neighbor, however, says we "overlooked" one important feature of the invention, viz: "the fact that one of Bartholomew's wheels is to run loose on its axle." The omission of a feature of the *invention*, without which the *Review* virtually admits the machine would operate precisely as we stated, is quite as remarkable as the invention itself.

We have carefully looked over the description and drawings which were published in the *Review*, and we are not willing to admit that we have "overlooked" *anything*, for we don't see a word said about this important feature.

The *Review* has, no doubt, "overlooked" the fact, that during the past ten years, at least twenty different plans for independent wheels have been patented, and that none of them have yet been found to succeed. We remember a contrivance of this kind, which the good nature of the managers of the Erie Railroad induced them to try several years ago, but not without many misgivings. However, to make the thing stay *on* the track, they put it in the middle of a freight train, so that it was *steered "fore and aft."* It behaved very well for a while, so long as the train was on the up grades; but as soon as a descent occurred, and the car was relieved from the tension of the draw irons, it bolted, carrying with it everything in the rear.

We looked upon this "reversible" invention, so elaborated by the *Review*, as most skillfully adapted to run *off* the track; but we must now acknowledge that it was not so perfect as we at first thought—for, without the independent wheels, it would *only run off on one side*. It required the new feature which the *Railway Review* has just thought of, to perfect it, *and it will now run off with equal facility on either side.*

We now propose to laugh with our neighbor on *both* sides of the mouth, and to invite the "*London Artisan*" to join us, as according to the *Review*, all the "absurdities" of the JOURNAL are copied from that paper.

Lightner's Patent Railroad Axle-Box.

In the U. S. Circuit Court, a suit against the Second Avenue Railroad Company of this city, for the infringement of this patent, has just been terminated by a verdict against this company, for the amount claimed and cost. The validity of the patent was vigorously attacked by the defendants, but was fully sustained by the Court. In the defence were associated several eminent lawyers, acting in behalf of other companies.

Forrester's Patent Day and Night Shifting Car Seat.

We have no hesitation in calling the attention of Railroad Companies to this seat as more nearly approaching the desideratum of comfort than anything that has yet come to our notice. The *seat* per se is so arranged that a passenger can give it any desired inclination, and the back may be set at any angle between a perpendicular and a level. Under each seat is arranged a series of folding cushions, which are used by the passenger in the next seat in the rear. By a very simple process these are opened and spread out in connection with the seat, so that a passenger may adjust his couch in any desired form, and with any desired number of angles to suit the requirements of his tired frame. He has, in fact, an adjustable invalid chair at his command. As a day seat the folding cushions underneath give a rest for the feet, and can be adjusted to meet every emergency of length of limb.

The most comfortable arrangement of these seats in the car, is in three single lines with two aisles or passage ways, each passenger thus having a seat entirely to himself. Practically as many passengers would be carried in such seats as in double seats for every one seeks a seat by himself, and when possible occupies at least two, and oftentimes four. On the wide gauge cars, the proper arrangement would be a single row of seats on each side and a double row in the middle, with the two passage-ways. But they may be used with the double seats on each side, where deemed expedient.

The cost for the double seats is $35; for the single seats, $20 each. In these days of competition, our railway companies are beginning to recognize the necessity of giving their passengers something more than the sharp corner of a mahogany plank to lean their elbows on, and of covering the heads of the screws, with which it has heretofore been customary to torture them.

"Night cars" have been provided, in which, for a half dollar extra, the deluded traveler supposes he can sleep. But the straight hard cushions and the diminutive pillows are never used the second time, even if the passenger survives the foul and stifling atmosphere of one of these "black holes." What is needed is not a "sleeping car," but a car provided with luxuriously cushioned seats, so constructed that their form may be changed, and the passenger be allowed to relieve himself from one fixed and inevitable position. Forrester's seat seems to fulfill the most rigid requirements, and we recommend it to the attention of our railway companies. It can be seen at the Railway Agency establishment of Gilead A. Smith, No. 207 Broadway, corner of Fulton Street.

Warwick Valley Railroad.

The Warwick Valley Railroad, a branch of the New York and Erie Railroad, extending from Chester to Warwick, is to be constructed immediately. The contract has been taken by A. P. ROBINSON, Esq., of this city, and THOS. EDSALL, Esq., of Goshen.

These gentlemen undertake to engineer and construct the road, finishing everything required. From the well known reputation of the first as a Civil Engineer, and the experience of the last as a contractor, the company have the best possible guarantee of the prompt and faithful fulfillment of this contract. The route is through one of the most populous and fertile valleys in the State. The whole line completed and in operation will cost less than $175,000, and no doubt is entertained but that the road will be remunerative. The citizens of Newburg have taken much interest in it, as it is, in fact, an extension of the Newburg branch towards the New Jersey line.

Charleston and Savannah Railroad.

The completion of this road to the Savannah river is announced in the Savannah papers. It was opened through, and the trains commenced running on the 20th ult. The whole distance from Charleston to the river is 89 miles. Until the completion of the bridge, and the remainder of the track leading into the city is completed, passengers will be conveyed to Savannah by steamer. The distance by water is some 16 miles, occupying about one hour. We learn that the work is considerably advanced on the south side of the river, and will doubtless be completed by the time the river is bridged, which it is thought will occupy about a year more. The distance will then be reduced to about 13 miles—making the entire distance from Charleston to the Central Railroad depot in Savannah, 102 miles.

A pretty full account of the bridge has been given in a recent number. It is being constructed by the *Trenton (N. J.) Locomotive and Machine Manufacturing Company*. When completed, it will be one of the finest structures of the kind in the country.

We believe there is but one other bridge of the kind in the United States—that over the Pee Dee, on the line of the Wilmington and Manchester Railroad, a full description of which was given in the report of Col. Walter Gwynn, which was published entire in the JOURNAL of May 6, 1854. The cylinders, engine, air pump, etc., in this instance, were supplied by the *West Point Foundry*, Cold Spring, N. Y., of which R. P. PARROTT, Esq., is the principal.

Contracts for two bridges, with foundations constructed in a similar manner, are to be built over the Mobile and Tensas rivers, on the line of the Mobile and Great Northern Railroad, contracts for which are already given out. The tubes in this case, as mentioned in our last issue, are to be sup-

plied by Messrs. JOHN ROGERSON & Co., New Castle upon Tyne.

The great advantage in the use of cylinders, sunk, by the pneumatic process, in localities that forbid the laying of foundations in the old way, without great expense, must soon bring it into general use.

Detroit, Monroe and Toledo Railroad.

At the annual meeting of this company, held at Monroe, the following directors were chosen for the ensuing year: Ransom Gardner, T. G. Cole, Henry H. Brown, Nelson Beardsley, J. H. Ran som, E. M. Gilbert, M. L. Sykes, jr., J. S. Barry, H. Keep, Philo Morehouse and Stillman Witt.

The directors, at a subsequent meeting, elected the following officers; President, E. M. GILBERT: Vice-President, M. L. SYKES, jr.; Secretary and Treasurer, HENRY H. BROWN.

Large Caloric Engine.

The Bordentown Machine Company have recently completed a first-class sugar-cane mill for a gentleman of Cuba, which is now being attached to a twin 48-inch Ericsson caloric engine, manufactured by the Newark Machine Company, at their words at Newark. This is the largest caloric engine yet made of the new pattern, and is supposed to be powerful enough to do the work of the largest plantation. The twin 32-inch engine has been found in practice adequate to answer the purposes of the ordinary planters.

Androscoggin Railroad.

A meeting of the bond holders of the Androscoggin Railroad, was held in this city on Friday and Saturday last.—The holders of about two hundred thousand dollars of these bonds were present. Hon. William Willis was chosen Chairman, and Mr. Joseph Isley, Secretary. A report was received and read, made by Jabez C. Woodman, Esq., who had been appointed by the bondholders to examine the affairs of the road. The officers and directors of the road were present, and after a full conference in the matter, an amicable arrangement was made to the following effect. The directors agreed to appoint a party satisfactory to the bondholders to receive the net earnings of the road, which are to be applied to the payment of certain debts due for iron on a portion of the road; and the bondholders on their part, consented to wait three months before proceeding to take possession of the road. Meantime a stockholder's meeting is to be held and negotiations completed to extend the road either to Gardiner or Bath, it being understood that the interest on the bonds is to be paid before the road is so extended.—*Portland Adv.*

Cincinnati and Chicago Railroad.

This road was sold on the 28th ult. at Commissioner's sale, by order of the United States Court, upon application of the English bondholders. The road was bid off at $30,000. The purchasers were Pierre Choteau, Jr., F. C. Gebhard, U. A. Murdock, John H. Thompson, and Henry Morgan.

According to a statement recently put forth by the Vice President of this company, the stock issued amounts to $3,000,000, which, together with the bonded debt and over-due interest and the floating debt, makes an aggregate of over $6,000,000 indebtedness upon 108 miles of road, most of which is not ballasted, and the whole imperfectly stocked. This would give a total expense of about $60,000 per mile. A cash basis, or something near it, would not have been over $15,000 per mile.

That portion of the road between Logansport and Valparaiso is all graded and ready for the iron from the latter point to the Cass County line. That portion in Cass County can be completed, according to the Engineer's estimate, for $12,000. We understand that it is the intention of the company to commence the laying of the rail at Valparaiso, and to have the portion in Cass County, together with the bridge over the Wabash at Logansport, completed by the time the track-laying shall have reached Cass County.—*Cin. Inq.*

Henderson and Nashville Railroad.

We understand that a contract for building ten miles of the Henderson end of this road has been let to Messrs. Sebree & Campbell at $90,000—the company to have the road graded and ready for the iron. Five miles are to be finished in five months and the other five in October.

Branch Road from Temple to Tuckerton.

A very pleasant excursion over the East Pennsylvania Railroad, took place on Wednesday last, with a view of inspecting the line, and especially noting the proposed branch road from Temple to Tuckerton, connecting the Schuylkill and Lehigh Valleys, thereby affording greatly increased facilities for the transportation of coal from the Schuylkill region to the great centre of commercial enterprise—the city of New York.

The excursionists, consisted of several of the leading coal operators, manufacturers, bankers and business men from Schuylkill, Berks, Lehigh and Philadelphia, including representative of the press, from Reading, Allentown, Pottsville, Minersville, etc.

The first stopping point was at the Temple Station, about six miles above Reading. It is at this point that the branch road is to diverge from the main line, and connect with the Reading road, at Tuckerton Station. The distance across is something less than two miles, over a level country, that will require little labor or expense in the way of grading and preparing the track. This branch, which is already surveyed, will cost only $25,000, while the estimates of the proposed Auburn and Allentown road are a million and half of dollars; though it will probably cost double that sum. When we add that the advantage in point of, distance is only 12 miles, or about half an hours running in favor of the Auburn and Allentown, the great folly of completing that expensive work will be sufficiently apparent. All the gentlemen present were impressed with the superior claims of the branch road, and gave it their hearty endorsement.—*Reading Journal, April* 21.

The Montgomery and Pensacola Road.

We find the following letter from the distinguished President of the Alabama and Florida Railroad in the Pensacola *Observer*.—The Pensacola papers have been in some tribulation about a rumored agreement between that and the Great Northern road, to delay the connection with Pensacola, until our road had effected a junction. We always knew that this arrangment had no existence except in the fears of the Pensacolians, but Mr Pollard's letter, besides contradicting this idle rumor, contains matters of interest to our community.

MONTGOMERY, April 9th, 1860.

Dear Sir: I have noticed recently some fears expressed in Pensacola, that the completion of our end of the Alabama and Florida Railroad is to be delayed, by an understanding with the Mobile and Great Northern Railroad Company, and that the two roads, that is, our end of the Alabama and Florida road, and the Mobile and Great Nothern, will be completed and opened about the same time, so as to take from Pensacola any advantage that might be derived by an earlier railroad connection of that place with Montgomery.

No such understanding exists between the two companies, or has ever been even suggested. An arrangement has been made that the two companies shall form a junction at some eligible point, between Fort Crawford and the Florida line, so as to transfer passengers and teams over our freight cars to go through without breaking bulk—and have agreed to place the freights and passengers, each of the other, upon the most favorable footing.

When this arrangement is put in operation, I shall propose to your company to run up your trains, both freight and passenger, to the same point, so that at the same time, and under a common passenger depot, we may transfer to both roads at the same time; until then we shall exchange with you at the Florida line, or make such arrangement as may be satisfactory to your company.

If your could have completed your end of the road by the 1st instant, I could have given you the connection with Montgomery by the 1st day of January, 1861. I fear now you will not get any of our iron up before the 1st of June—and I cannot complete our end of the line before the 1st of April, 1861.

We have ready for transportation 800 tons, as you know; by the time this reaches you I hope two first class locomotives, shipped from Philadelphia on the 17th ult., will be safely in and landed on your wharf, and that the iron work for a train of freight cars, which we shall build in Pensacola, will not be many days behind.

I will close my iron contracts by the 1st of May, and I have so longed delayed doing so only to save the interest, for we have been exceedingly fortunate in making sales of our bonds as we have needed the money, *and always at par.*

We have iron now laying at our Montgomery depot to complete the road to the 63 mile station, south of Montgomery, and which we expect to open by the 1st day of July.

You may feel every confidence in assuring your friend, if you can complete your road to the State line by the 1st of June so that we can get through our iron, for I purpose to land the remainder at Pensacola, (3,200 tons,) Pensacola and Montgomery will be connected by rail, certainly, by the 1st day of April, *and perhaps sooner.* I am very respectfully, C. T. POLLARD, *Pres't.*

To Major W. H. CHASE, *President, &c.*

—*From the Mobile Register of April 18th* 1860.

St. Joseph and Marysville Road.

The pioneer engine "Albany," the first locomotive west of the Missouri, was put upon the St. Joseph and Marysville Road on the 23rd ult. The "Albany" was procured from Eastern companies by the first road west of Albany, and has been the engine on each road in the chain. It has been extended westward until it now stands upon the first section of the Central route to the Pacific.—

REMOVAL.

THE subscriber respectfully informs his friends and the public that he is about to remove to his new building **No. 24 Columbia st.**, where he will be prepared to furnish

Hydraulic Jacks,

of from 4 to 150 tons lifting power. PULLING JACKS of different sizes. **Hydraulic Presses** with Platens. Hydraulic PUNCHES for punching from ⅜ to one inch holes through iron one inch thick.—**FORCE PUMPS** for Hydraulic Presses for testing tubes, cylinders, etc., as high as 20,000 lbs. to the inch. **STEAM CARRIAGES** for good hard roads. SQUIRTING OIL CANS, ect. All orders must be addressed to

RICHARD DUDGEON,

12.	" 18 "	1 to 1	24.	" 32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

PROPOSALS FOR PILING.

PROPOSALS will be received until Thursday the 10th day of May next, at the office of the Staten Island Railroad Company No. 2 Bowling Green, for piling about three hundred feet of their road at the Eastern terminus. Plans, specifications and all necessary particulars, will be furnished at the office, or by the Engineer on the Island.

L. O. BRUYN,
1t Engineer Staten I. R. R.

NOTICE TO Railroad Contractors.

SEALED PROPOSALS will be received at the office of the West Jersey Railroad Company at Woodbury, Gloucester County, New Jersey, for the Grading of a Railroad from Woodbury to Glassborough (a distance of 10 miles) until Thursday, the 10th of May, 1860.

Also at Bridgefon; for the Grading from Bridgeton in Cumberland County, to Pittstown in Salem County (a distance of 10 miles) until Thursday, the 17th of May. 1860.

Also at Glassborough; for the Grading from Pittstown in Salem County, to Glassborough in the County of Gloucester (a distance of 10 miles) until Thursday, the 24th of May, 1860.

Profiles, Plans and Specifications of the work may be seen at the Engineer's office in Woodbury, for the First Division; at Bridgeton, for the Second Division; and at Glassborough, for the Third Division, three days before the letting of each Division.

4t17 WM. COOK, Engineer.

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will send a Governor to any responsible person for trial, and if its action is not perfect under the above test it may be returned.

Prices exceedingly moderate.

All orders and communications will receive prompt attention. Send for a circular.

Address **CHARLES T. PORTER, Patentee and Manufacturer,**
235 West 13th St., NEW YORK CITY.

4t16 No. 76 Cedar st., New York.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.
New York, March 29, 1860.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held this day, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, be, and the same is hereby called, payable on the 15th day of May, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. ROBERT BENSON & Co.; and that parties desiring to pay their instalments in London, may pay the same, at the rate of four shillings two pence sterling to the dollar.

Resolved, That the Transfer Books be closed on the 10th day of May, and re-opened on the 15th, and that no transfers be permitted after that date, of shares upon which such assessments shall not have been paid.

Resolved, That interest at the rate of seven per cent. per annum be allowed upon all assessments paid previous to the 15th of May, and charged at the same rate upon all assessments paid after that date. By order of the Board.

A. E. BURNSIDE, Treasurer.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

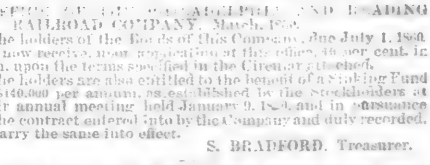
The holders of the Bonds of this Company, due July 1, 1860, can now receive, upon application at this office, 40 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of the Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting, held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

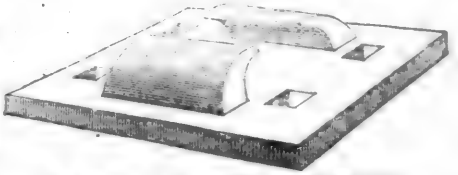
NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,268,500. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.



A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.



By order of the Board of Managers.

2m15 W. H. McHENNY, Secretary.

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans, Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
162 West 28th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,

NEW YORK,

For Railroads, Machine Shops, Steamships, Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD.

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness exceeded by no Cement manufactured. It has met the approval of the Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing,

WM. N. BEACH, President,
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Victoria Bridge.

(Continued from p. 371.)

Mr. Brunel while recommending the lengthening of the spans as making a great saving in the cost of the bridge, at the same time discussed the propriety of adopting the principle of continuity upon which Mr. Stephenson had remarked in his report as follows: "The Victoria Bridge has *not* been designed upon the principle of continuous beams, for various practical reasons, including among others the great disturbance which would be caused by the accumulated expansion and contraction of such a continuous system of iron work, in a climate where the extremes of temperature are so widely apart."

What the *other* "practical reasons" are does not appear. The tubes of the Britannia Bridge are continuous for their whole length—1,513 feet. It seems that the *other* "practical reasons" did not exist there. Mr. Stephenson admitted the advantage of this principle in the case of the Boyne Bridge, where he says: "In fact this principle changes the *three* spans into *five* spans. * * In effect shortening the span of 264 feet to 174."

The principal difficulty in Mr. Stephenson's mind must have been that due to contraction and expansion.

The Britnania tube is fixed at the middle of its length, all the other bearings being upon metal balls, permitting each half to contract and expand, and it was estimated that with the ordinary range of the thermometer the extreme movement of each half would be about 6 inches.—The change in the length of a bar of malleable iron, produced by a change of one degree of temperature is about $\frac{1}{13000}$ths., of its length.

For a difference of 150°, which certainly is more than the difference between the extremes of temperature at Montreal, the change would be one foot in one thousand. If therefore, the Victoria tubes had been constructed in lengths of four spans, fixed at the centre, the extreme movement at each end would not have been more than six inches. With piers *feet thick on top, there certainly was no danger of their contracting so as to leave their bearings.*—This arrangement would have changed the four spans into seven. Surely here was an opportunity for a saving of material not lightly to be passed over, or if the material in the tubes is now so thin that "as a question of durability altogether apart from strength," they could not be made lighter, then at least the spans might have been made much longer without any increased weight per foot, and thus a *greater* saving than I have estimated might have been made by increasing the spans and lessening the piers.—It is not to be presumed that the bridge could have been well connected in one continuous tube. The contraction and expansion due to the whole length would have been 3 feet at each end.—Mr. Brunell says: "If the tubes were formed in setts of four each, fixed to the piers at the centre and rolling upon the others, I should not apprehend any difficulty from the contraction and expansion. It would not be greater (or very little so) than at the Britannia Bridge, and the effects of the inclined plane would be obviated by making the rolling surfaces horizontal."

It is difficult to see why a movement of 6 inches is *any more* objectionable in the Victoria Bridge than in the Britannia Bridge.

Mr. Brunel considered "that if the tubes were made continuous to this extent, a very *slight addition* to the quantity of iron, with a slight modification of the relative thickness of the plates at different parts, the spans will allow of being increased to from 242 to 295 feet," and he "would not hesitate to recommend extending them to 320 feet. By the first, three piers might be dispersed with. By the second four, and a saving effected of from £50,000 to £60,000."

Mr. Liddell says: "no bridge of any importance has hitherto been constructed of plane girders except on the principle of continuity; and why this principle has not been adopted in the design for the Victoria Bridge it seems to me difficult to reconcile with any "practical reason."

He considered that a saving of 40 per cent. of material might have been made; and he says: "Why Mr. Stephenson, who had an opportunity of appreciating the value of the principle of continuity at the Britannia bridge, should have so lightly abandoned it in this case it is difficult to conjecture." What is more astonishing to engineers who have examined the bridge, than almost anything else, is that this principle should not have been applied, at least, to the centre spans of 330 feet. The other spans *are* in pairs while this, 90 feet longer than any other, is left entirely alone.

The comparisons I have made, have necessarily been made on Mr. Ross' figures of cost, and, therefore, so far as pounds, shillings and pence are concerned, are more unfavorable to the tube, perhaps, than they would have been at such prices for this work, as it ought to have been executed for. Had the masonry of this bridge been subject to public letting, there is not a builder in the United States that would have dared to tender at a higher rate than 17 dollars per cubic yard, for fear of being ridiculed as not understanding his business. The stone was obtained within a few miles, and the transportation for the entire distance was by canal and rail. That this price was sufficient, may be inferred from Mr. Ross' report, where he estimates the value of the masonry, excluding foundations, at 2s. 6d. per foot, or £3 7s. 6d. per yard, and from the fact that the masonry in the Britannia and Conway bridges cost but about two shillings per foot. If the same margin

Victoria Bridge.

Mr. Brunel while recommending the long [illegible] ing of the spans as making a great saving in the cost of the bridge at the same time discussed the property of adopting the principle of continuity upon which Mr. Stephenson had remarked in his report as follows: "The Victoria Bridge has been designed upon the principle of continuous beams, for various practical reasons, including [illegible] be caused by the accumulated expansion and [illegible] in a climate where the extremes of temperature are so widely apart."

What the "various practical reasons" are does not appear. The tubes of the Britannia Bridge are continuous for their whole length—1,513 feet. It seems that the "various practical reasons" did not exist there. Mr. Stephenson admitted the advantage of this principle in the case of the Boyne Bridge where he says: "in fact this principle [illegible] the long spans [illegible] over, or if [illegible] [illegible] upon the contraction and expansion [illegible] be greater or less [illegible] would be obviated by making the [illegible] that in the Britannia Bridge.

was provided in foundations as in masonry, of which there is little room for doubt, the *whole of the piers and abutments* should have been built for the following:

84,000 yds. masonry, £3 7s. 6d.	£288,500
Foundations	250,000
Total	£538,500
The actual cost was about	950,000
Difference	£411,500

Now, according to the reports, the cost of the *piers alone below summer level* was more than 50 per cent. in excess of this, or about £640,000. The actual quantity of masonry under water was about 12,800 yards, so that the cost, including foundations, was £50 per cubic yard, or 37 shillings per foot! This is most astonishing, and nothing like it has ever been known in the history of bridge building or any other kind of building. A popular standard for a comparative view of this enormous expenditure, cannot better be shown than in Mr. Liddell's words:

"Now an almost solid mass of cast iron might be sunk on to the rock for such a sum of money. The masonry of the Skerryvore Lighthouse, built on a storm-beaten rock in the Atlantic, off the North-west coast of Scotland, 11 miles from the island of Tyree—the nearest land—an island destitute of any shelter for shipping, to which everything had to be brought; laboring under all the disadvantages of remoteness from markets, inaccessible shores, and stormy seas; the masonry in that work, every stone of which had to be carried in steamers to its place as weather permitted; every stone of which was granite, of expensive form, chiselled to the finest possible joints and beds; so finely fitted, dowelled and cramped, as to make the structure almost a monolyth; the masonry in that work certainly executed under the greatest difficulties on record, and in a manner, I believe, as expensive as any on record, cost but 12s. 6d. per cubic foot. I might go on to compare the work with that of the Eddystone and Bell Rock Lighthouses, in both of which the cost of masonry was considerably lower than in that of Skerryvore; with the foundations of the London bridge, the cost of masonry, in which up to high water level, including coffer dams and all expenses, did not exceed 12s. per cubic foot, though on piles, the head of which are in water of 23 feet depth at low tide, and with a rise of tide of 19 feet, *i. e.*, 42 feet below high water level, or five times the average depth of the Victoria bridge foundations on solid rock. I might go on to compare the work with innumerable other examples, all telling the same tale, and the nearer they approach in similarity of position, telling the tale with more effect. Is it not then preposterous to talk of spending £1 16s. 6d. per foot for even the ashler foundations, placed on the solid rock for the Victoria bridge."

If this is what Mr. Brunel defends as being a "judicious expenditure," it would be a difficult task to define what would be injudicious.

The Graving Dock, in the Brooklyn Navy Yard contains 23,775 cubic yards. The discharging culvert, engine house, and other masonry connected with it, contains 5,250 cubic yards. The material upon which it is built is an almost impalpable sand, which, when saturated with water, became a simi-fluid mould by the slightest current. Borings made to a depth of sixty feet below the level of the foundations found the same material. It was on this material that the coffer dam had to be constructed to exclude the tide, and a foundation prepared to sustain the enormous weight of the superstructure. The pit, which was excavated 37 feet below mean high water, covered an area of over two acres on the top, and over one acre at the bottom. The dam was several times breached by the pressure of water against it, and the irruption of springs in the bottom bringing in large quantities of quicksand, undermined it, and finally made necessary the construction of a new dam outside the first. The same fluid state of the material within, after the water was finally removed, was such as to require its removal in tight vessels. The least depth of the dock is over the mitre sills, where there is 26 feet of water at mean high tide. The whole bottom was driven full of piles, which were sawed off, to a depth of 33⅓ feet below mean high tide, and the earth was removed, as before stated, to a depth of 8⅓ feet lower. The piles were then capped, and the space between the caps was filled with concrete. This was covered with plank, laid closely, upon which were placed another row of timbers, the spaces between which were also filled with concrete. Upon this, the stone-work was built.

It is believed that no modern structure in the world surpasses this in the size of the stone, the accuracy of their workmanship and their durability. All the facing stone was brought from Maine, a distance of four hundred miles, or from Connecticut, a distance of one hundred miles. The interior stone was brought principally from the Highland quarries, a distance of 50 miles.

The mitre sills are immense blocks of granite. The key stone weighed 50 tons before it was cut. Sixteen similar stone form the sills, the smallest of which weighs 13,300 lbs. The masonry is laid up with the English bond, and the facing stones are cut to a joint of 3-16 inch. The most rigid tests were required for the cement. [illegible], with all these difficulties, and with all these requirements, the masonry in this dock, which was designed to be, regardless of expense, equal to any in the world, cost but £300,000, including all expenses of foundations and excavations, or about 9s. 6d. per cubic foot, but little more than one-quarter the cost of the under water masonry of the Victoria bridge, on solid rock.

Example after example might be cited to show how utterly uncalled for and unnecessary was such an enormous expenditure for even the plan which was adopted.

When such work as was involved in the Skerryvore Lighthouse costs but 12s. 6d. per foot—when the work in the Bell Rock and Eddystone Lighthouses cost even less—when the foundations of London bridge, forty-two feet below high water, cost but 12s. per foot—and the Brooklyn Graving Dock, thirty-seven feet below high water, cost but 9s. 6d. per foot, it requires no further proof to sustain the assertion that 36s. 6d. for this masonry is a most preposterous cost. And so with regard to the superstructure, which Mr. Ross puts at £57 per foot, or about £54 per ton. The Britannia tubes, a part of which were built in place at an elevation 60 per cent. higher than the Victoria tubes, and the rest constructed on the land and floated to the base of the piers on immense pontoons, from which they were raised bodily to their position by hydraulic presses, cost but about one-half the price of the Victoria tubes. With every allowance made for transportation of materials to Canada, and the higher cost of labor in that country, £30 per ton would have given a large margin for profit. Our best American boiler plate girders are made by the Portland Company, and placed in position at 6½ cents per pound, or £26 per ton. Surely the Victoria tubes ought not to have cost more.

Now if we take the quantities of work in the Victoria bridge, just as it has been constructed, and apply such values to the different items as beyond any question the work could have been executed for, the following would be the result:

Embankments, 150,000 yds., 50 cts.	$75,000
Masonry, 84,000 yds., $17	1,428,000
Foundations	1,000,000
Superstructure, 7,200 tons, $150	1,080,009
	$3,583,000

—or £716,600, instead of $1,400,000.

(To be continued.)

Morris Canal and Banking Co.

We have received the report of this company for the fiscal year ending Feb. 29, 1860; from which we learn that the canal was opened throughout its entire length, the last week in March, 1859, but that shipments to much extent did not commence till the 2nd week in April. The Navigation was maintained during the entire season with but trifling interruptions, and closed the 2nd week in December.

The income of the company from tolls and rents were $305,537 93, being an advance of $30,518,49 upon the income of the previous year. There has also been received for premium on preferred stock sold during the past year the sum of $8,158 75. The expenses for operating the canal, including repairs to the canal and its works, during the year, have amounted to the sum of $137,635. The report says:

A portion of these expenses, however, should be regarded as extraordinary, as they embrace the cost of bottoming out the canal, including dredging between the Passaic and Hackensack River, and towing the boats around while the work was being done between said rivers.

These expenses and repairs have amounted to about $17,000, and as a like expenditure will not be required for several years to come, the one-half of these extraordinary expenses may be fairly deducted, reducing the cost of ordinary repairs and operating the canal, to the sum of $129,135.

Although these expenses are somewhat larger than those of previous years, yet, when the amount of repairs done, and their necessity and value to the canal and its business are considered, they will be found quite as low as a proper regard to economy would justify.

The results of the year's business, however, are extremely gratifying, for while so much has been done to give increased capacity to the canal, and provide for its growing business, the next earnings have been sufficient to pay the interest on the Bonded debt, the unusual dividend on the Preferred Stock, and $4 a share upon the Common or Consolidated Stock, being equal to about 8 per cent. per annum upon its present market value.

There has been expended since the last annual Report, in the permanent improvements of the canal and its works (including the outlay at Jersey City) the sum of $149,478 30.

These expenditures were required in completing the two inclined planes in progress of construction at the date of the last annual report; in the construction of two new planes, and in changes

of a third to make it conform to the others on the line; in building a new lock where the canal connects with the Passaic River; in the construction of an extensive and substantial apparatus to supply the canal with water, between the Hackensack and Hudson Rivers, and in building piers, wharves and basins, at Jersey City.

The canal and its works are now in excellent condition; the inclined planes are all rebuilt upon the improved plan; several of the locks have been extensively repaired, and all are in good working order. There is full five feet depth of water in all the levels. The navigation between Newark and Jersey City has been made equal to any part of the canal, and the improvements at Jersey City greatly facilitate and encourage the reshipment of coal at that point.

The improvements originally contemplated are now completed, and no further outlay will be required for permanent improvements, unless it should be deemed the policy of the Company to still further increase the tonnage of the boats as suggested in the report of the Engineer, by increasing the depth of water, and lengthening the locks.

It may likewise be found expedient and advantageous to incur further expense in the construction of additional piers, wharves, and wet basins, at Jersey City.

Should that contingency occur, the improvements suggested will doubtless be well considered by the Directors, and such course adopted as will promote the interests of the company.

At the time when "the further supplement" to the charter of the company was obtained, in 1849, the estimate of the Superintendent and Engineer, of the financial wants of the company, including the amount required to make the contemplated improvements to the canal and its works, was $1,200,000. That law authorized the company to issue $1,175,000, of Preferred Stock. The stock has all been issued, and there has been realized from it the sum of $1,156,000.

In the estimate referred to, there was embraced the then indebtedness of the company, the rebuilding of twenty-two inclined planes on the plan of the trial plane No. 6 West, the construction of a new aqueduct over the Pompton river, with the necessary change of the line of the canal at each end of the aqueduct, the raising and strengthening the banks of the canal, to increase the depth of water, and permit the use of boats of greater tonnage, the building of a large number of waste weirs for the protection of the canal against sudden freshets, the rebuilding of numerous bridges, then in a state of dilapidation, substituting stone abutments for timber framing, to support the bridges, the opening of the canal between Newark and Jersey City, and the payment of unsettled claims of long standing, and claims for damages to land along the line of the canal.

All the work embraced in that estimate has been completed. There has also been expended for works not included therein, the sum of $134,000.

The total amount of the floating debt of the company on the completion of all the works will be only about $75,000—which is less than the cost of the work not embraced in the original estimate. These improvements have increased the tonnage of the boats from 50 to 70 tons, and reduced the coal freights from $1.43 to $1.00 per ton between Mauch Chunk and Newark. The report closes by stating that the prospects of business for the ensuing years are encouraging. The gradual improvement of the general business of the country, the improved condition of the canal, the favorable aspect of the coal trade at this early period of the season, and the indications that a considerably increased quantity, both from the Lehigh and Scranton regions, will be brought to market through the Morris Canal, justify the expectation of augmented receipts over those of the last year.

The officers for the ensuing year are:

EPHRAIM MARSH, *President.*

WM. H. TALCOTT, *Supt.* and *Engineer.*

LEWIS N. CONDIT, *Secretary.*

Steam Fire Engine.

We copy from the *Herald* of 27th ult., the following description of a new fire engine which has just been completed by Messrs. LEE & LARNED, of the Novelty Works, Twelfth St., N. Y., for the Southwark Engine Co. It was contracted by authority of the Common Council, at a cost to the city of $4,500; but the company has made numerous improvements on their own account, which have added a trifle more to its cost. The old style of hand engines are fast passing into oblivion, to be replaced by the more effective and economical motor, steam. The description given, is as follows:

The new steamer is of similar dimensions to the Manhattan steam fire engine No. 8, which has done the city such eminent service since it has been in use, namely: an engine of eight inch diameter of cylinder and nine inch stroke of piston. The steam is furnished from an annular boiler which has 225 feet of fire surface. The pump, which is worked by the engine, is one of Cary's celebrated rotary motion, and is capable of throwing a stream of 260 feet. The engine and carriage are finished in the highest state of workmanship, the engine being neatly polished and superbly ornamented and relieved by brass work; the air chamber on the front of the engine is elegantly plated with silver, in front of which is the motto of the company, "*Semper paratus.*" On top of, and connected with the air cylinder is an elegant gold plated signal lamp, with colored glass sides, and helps in a great measure to beautify the machine. The carriage work is of a neat light green color, with gold stripes; all things combined render the apparatus one of the handsomest in the city.

Pittsburg, Ft. Wayne and Chicago Railroad.

The annual meeting of the stockholders of this corporation was held in Pittsburg on the 27th of March. The third annual report of the Directors was presented and read. From this we learn that the receipts were:

From passengers	$795,739 57
" freight	964,132 73
" express freight	39,197 92
" U. S. Mail	93,900 00
" rent of road	66,000 00
" rents, etc.	7,017 58
	$1,965,987 80

And the expenses were:

Conduct'g transp'tation.	$284,890 18	
Motive power	460,765 11	
Maintenance of way	351,398 76	
" cars	136,882 72	
General expenses	57,396 18	
		1,291,332 95
Leaving as net earnings		$674,654 85
Compared with the previous year, the gross earnings show an increase of		$378,755 58
And the expenses an increase of		325,759 35
Making the increase in net earnings		$72,996 23

The revenues of the Company from the business of the road, have fallen short of the estimate given in the last annual report, $159,297 60.

This is mainly to be attributed to the destruction of the grain crops by frost along the eastern half of the road, traversing much the most populous and productive portion of the country tributary to the line. The increase of receipts of the Company from its extension to Chicago, has, in view of the continued depression in the business of the North-West, equalled our anticipatien.

The expense of operating the road, compared with its receipts, has been increased in a greater ratio than is due to the increased length of the line, owing to the reduction which the Northern lines made in the rates of transportation upon through business, and the absence of the more profitable local traffic of the Company, from the causes already mentioned. To these may be added the continued heavy outlay necessary to meet the depreciated condition of the road and its rolling stock, that had resulted during the struggle, after the consolidation to preserve the credit of the Company by appropriating more than the net revenues of the work to the payment of the interests upon its securities, and the protection of its hypothecated Bonds.

If the road and its machinery had been maintained in full and effective condition, the result of its operations for the present year, notwithstanding the blight that so seriously affected the resources of our customers upon the eastern end of the road, would have been adequate to meet the interest on its obligations.

This condition of the Company's property, while it has improved during the year, still continues, and must for some time affect its net resources.

Four passenger cars have been added by purchase to the number on hand, January 1st, 1859, and four sleeping cars were placed on the Road by Messrs. Woodruff & Co., under a contract made

Morris Canal and Banking Co.

with them, by which their ownership remains in the contractors.

Nine passenger cars have been rebuilt to replace the same number worn out, and five more are condemned as unworthy of repair.

Fifty stock cars and fifty close freight cars, required for the increased traffic offered, have been leased upon favorable terms from the Pennsylvania Railroad Company. These cars were essential to the accommodation of the traffic of the road, and this arrangement to procure them rendered necessary from the inability of the Company to make a purchase. A large amount of repairs have been made and are still required upon the box and platform cars.

The deficiency in the net receipts of the Company to meet the interest upon its indebtedness since the consolidation, has been:

From Aug. 6th to Dec. 31st, 1857	$54,751	60
From Jan. 1st " " 1858	87,273	98
From " " " " 1859	94.484	37
In all	$236,510	04

In view of these facts it accurred to the Board that a slight concession from all the creditors of the Company would place its indebtedness upon a sound basis, thus enabling the Company to meet its interest regularly, and by the establishment of this fact, at once given to its securities a settled market value, that would much more than compensate for the concession asked. Under this impression a circular, was prepared after consultation with a number of influential bondholders, and distributed among the creditors of the Company for their consideration.

The principles upon which the proposed re-organization of the Company's debt were based, seemed to meet with general approval; some modifications were suggested, which could have been readily adopted. The members of the Board, under these circumstances, were therefore much surprised to learn on the 7th and 8th of December last, that proceedings had been taken by the representatives of some of its bondholders, under a misapprehension as to the application by the Board, of the net revenues of the Road, to remove the custody of the property of the Company from the Board, to that of a Receiver, to be appointed by the United States Court.

At a meeting subsequent to these proceedings, between a Committee of the bondholders and the Board of Directors, an arrangement was concluded, by which a change in the decree and Receivership was effected, and W. B. Ogden, Esq., of Chicago, a gentleman entirely acceptable to all the interests involved, was appointed Receiver of the entire road, but at the District Court of Alleghany County, Pennsylvania, had on the 9th of December, 1859, upon the application of local creditors, appointed a sequestrator to take charge of that part of the road, about 49 miles in length, situate in the State of Pennsylvania, and within its jurisdiction, the Receiver has not thus far been able to obtain possession of that important portion of the Road.

In consequence of this contest between the different class of creditors, the revenues of the road have been materially impaired, while the disorganization that ensued previous to the arrangement referred to, has added materially to the expenditures of the Company.

The consolidation of the three Companies developed a much larger floating debt than the imperfect manner in which their accounts were kept seemed to indicate. The protection of this indebtedness, and the outlays required on the extension of the road from a point twenty miles west of Fort Wayne to Chicago, which were incurred in advance of the sale of the securities of the Company, resulted from necessity, in the hypothecation of the Company's bonds to a large extent. The three coupons funded by the bondholders, to enable the Board to apply the net revenues of the Company to release the securities thus pledged, proved insufficient for that object, and they were left the alternative, after the expiration of this period, of resuming the payment of the interest upon its bonds, as far as practicable in the order of their priority, or to submit to a sacrifice of the securities hypothecated. If their efforts to prevent the latter had not been disturbed, this could, it is believed, have been accomplished during the current year.

In reviewing the affairs of the Company, and the results of the last year's business, we can, with confidence, assure the stockholders that with the disposition lately manifested by the bondholders to arrange the obligations of the Company on an equitable basis, that their property will be preserved to them, and will, if judiciously managed, at no remote period, produce regular dividends.

The following statement will show the plan for the re-adjustment of the affairs of the company:

In 1857, the company failed to pay the coupons due on the 1st October, and in November following suspended payment on its floating debt. To relieve the company from embarrassment, and to allow the earnings to be applied to the discharge of current liabilities, the bondholders consented to fund the coupons falling due to April, 1859, into 10 per cent. bonds due in five years from 1st April, 1858. This plan was only partially carried out, and default was again made in the interest falling due on the 1st July, 1859, in consequence of which the road was placed in the charge of a Receiver, excepting that portion lying in the State of Pennsylvania, which had previously been placed in the hands of a sequestrator on the suit of local creditors. To relieve the company of its present embarrassment the following plan for the adjustment of its liabilities is proposed:

The 1st mortgage bonds of the old companies to be assigned to a Trustee, and a *new First General Mortgage* upon the whole road to be executed for $5,100,000. This sum will cover their principal sum, ($4,000,000,) the sinking fund bonds issued for interest thereon, ($420,000.) and the coupons to fall due before 1st July, 1861, not exceeding in amount $680,000. The bonds issued under the new mortgage are to be irredeemable, and bear 6 per cent. interest, payable semi-annually, in New York. In case of default in payment of interest for 90 days, the Trustee is empowered to take possession of and work the road until satisfactory arrangements are made by the company to meet the interest regularly thereafter.

The 2d mortgage and income bonds of the old companies, the 3d mortgage bonds of the Ohio and Indiana Company, the general mortgage bonds of the Consolidated Company, and the sinking fund bonds issued for interest on all except the 1st mortgage bonds, to be assigned to a Trustee, and a new 2d mortgage upon the whole road to be executed, securing the issue of $6,500,000, of *Seven per cent. Preferred Stock*, in 130,000 shares. This mortgage to give such preferred stock precedence of all other debts, except those for such labor and materials as may be necessary for operating the road. The debts included under this clause are to be funded at par, and entitled to all the net profits until the amount during any one year shall exceed a sum sufficient to pay the interest on the 1st mortgage bonds, and a dividend of 7 per cent. on the said preferred stock; the surplus, if any, to form a dividend on the common stock. Until the necessary legislation be obtained, *transferable certificates of indebtedness* to be issued, secured by the 2d mortgage, and to bear 6 per cent. interest—these certificates to be converted into seven per cent. Preferred Stock as soon as such legislation is obtained. If not obtained, then said certificates to be converted into *irredeemable 7 per cent. bonds*, secured by a second mortgage. If within 90 days after the dividend or interest, as the case may be, becomes due, the company fails to pay it, the Trustee to take possession and manage the road temporally for the interest of all parties, and he shall immediately thereafter give notice to the Preferred Stockholders to elect twelve members, and to the Board of Directors to elect three members of a Board of Control, to continue in power until the interest shall be promptly met, and a surplus remain amounting to 2 per cent. on the common stock; in this event, the common stockholders to resume control, with the proportion of the Directors above-named *reversed*.

The Floating Debt (as it stood on the 31st October, 1859,) amounted to $1,830,612. viz: secured, $1,168,963, and unsecured, $661,649. This to be discharged from the net revenues until 1st January, 1861, and by so much as may be necessary, of the Preferred Stock remaining after funding the bonded debt.

The surplus of Preferred Stock, after the payment of the Floating Debt, is to be held and disposed of for the purpose of increasing the equipment of the road, and of erecting stations at its termini.

The condition of the company's finances, these propositions being effected, will then be as follows:

Common stock	$6,263,438
Seven per cent. Preferred stock	6,500,000
First mortgage, 6 per cent. bonds	5,100,000
Bridge bonds, specially provided for	216,500
Real estate bonds, separately secured on land	198,000
Total	$18,277,938

The income required to meet the interest on the 1st mortgage bonds will be $306,000; on the Preferred Stock, $455,000; and on the bridge bonds, $15,155, or a total of $776,155, an amount which the net receipts will, it is believed, be ample to meet on the 1st July, 1861.

On the 31st March, 1860, the Legislature of Pennsylvania passed an act authorizing the re-adjustment of the debt upon the basis proposed. In the meanwhile, the road and other property of the company to remain in the hands of the sequestrator and receiver.

The Income Account for the year ending Dec. 31, 1859, is as follows:

RECEIPTS.

Earnings, as above	$1,965,987 80
Discount on sinking fund bonds redeemed by Trustee	13,713 39
Balance Dec. 31, 1858	142,025 67
Do. Dec. 31, 1859—being excess of expenses, discount, interest over earnings, etc.	94,484 37
	$2,216,211 28

DISBURSEMENTS.

Expenses, as above	$1,291,332 95
Interest on bonds	628,600 59
" floating debt	113,057 15
Discount on currency	6,905 70
Exchange on bills remitted London.	2,493 33
Commiss. allowed for fund'g coupons	1,496 54
Taxes paid for 1859	6,014 20
Drawbacks and overcharges	24,285 10
Balance Dec. 31, 1858	142,025 67
	$2,216,211 28

The equipment of the road consists of 177 locomotives: 127 passenger, 32 mail, baggage and express, and 1,293 freight cars.

The following statement exhibits the condition of the company at the close of the fiscal year, December 31, 1859:

Capital stock		$6,266,277 92

Mississippi, Ouachita and Red River R. R.

This road extends from Gaines' Landing, on the Mississippi river, to Fulton, on Red river, where it forms a junction with the Memphis and El Paso road, and ultimately will make a new approach of the Atlantic and Pacific road to the Mississippi river. The distance from the eastern to the western terminus is 159 miles. It traverses ten counties, rich in soil, and adapted to the cultivation both of cotton and grain. The assessed valuation of taxable property in these counties is $20,000,000, the tide of emigration into them is steady, and their progress, even under present disadvantages, is rapid.

At the present time 12,000 bales of cotton are shipped from Gaines' Landing to New Orleans. The moment twenty miles of this road are completed, crossing in a southwest direction the bottoms, it is believed at least 20,000 bales will be shipped. A large amount of freight for the interior, not only of Arkansas, but even of Texas, passes across these bottom lands from Gaines' Landing, via Camden, in wagon trains, and when the road crosses this difficult region of country, the supply of an immense district will come from New Orleans over this route.

As soon as the road reaches Fulton, on the Red river, it opens navigation above the raft eight hundred miles, bringing into close contiguity with our market one of the finest territories for productive capacity west of the Mississippi river.

The Mississippi, Ouachita and Red River Railroad Company has a stock capital of $2,000,000. Private subscriptions amount to the handsome sum of $500,000. The company has, as yet, received no aid in lands or otherwise from the General Government or the State, but from present indications both will soon be obtained. Public opinion in Arkansas is becoming decidedly favorable to State and to domestic railroad enterprises, and the Federal Government, following the policy so liberal to other enterprises of this character, can scarcely withhold its benefaction.—*N. O. Picayune.*

Journal of Railroad Law.

TAXATION OF CORPORATIONS: PRINCIPAL OFFICE OF: WHERE SITUATED.

The law of the State of New York on the subject of the assessment and collection of taxes provides, that "all the personal estate of every incorporated company, liable to taxation on its capital, shall be assessed in the town or ward where the principal office or place for transacting the financial concerns of the company shall be.

Of course, the tax collectors of the place where the principal office here intended is situated, are empowered to collect the taxes from the company. It then becomes a matter of some importance to the company to locate their principal place of business where the taxes will probably be the lightest at least so long as the location of the office in such a place would not be likely to interfere with the business of the corporation. The case we are about to consider, arose upon the question, as to what was the principal office, for the purpose of taxation, of the Western Transportation Company.

This corporation was organized under the act of April 15, 1854, for the incorporation of companies to navigate the lakes, etc., the first section of which provides, that any five or more persons may form a company, by making a certificate in writing and filing the same "in the office of the clerk of the county in which the principal office for the management of the business of the company shall be situated," in which certificate they are required to state among other things, the name of the city or town and county in which the principal office for managing the affairs of such company is to be situated."

Pursuant to this act they filed a certificate bearing date Dec. 28, 1855, containing the following: "The principal office for managing the financial and other affairs of such company shall be located and situated at the village of Tonawanda, in the town of Wheatfield, county of Niagara, which is hereby declared to be the village, town and county where the principal office for managing the affairs of such company shall be situated.

The capital stock of the company, amounting to $900,000, was taxable. It had been assessed for such capital in the town of Wheatfield, and it admitted its liability to such assessment. But it had also been assessed in the city of Buffalo, and the defendants, Scheu and Reynolds were officers of that city, the former of whom had issued, and the latter was proceeding to enforce a warrant for the collection of the tax. The company denied their liability for the Buffalo assessment and sought by law to restrain the defendants from collecting it. The trial was held in the Supreme Court before Mr. Justice Davis, without a jury, and he ordered judgment for the plaintiff. This judgment was affirmed at general term in the eighth district, and the defendants again appealed to the Court of Appeals.

It was proved upon the trial before Justice Davis that the company shortly after its organization, established and had ever since maintained an office at the village of Tonawanda, where the stock book of the company was kept, and where the directors held their regular monthly meetings, but at which very little other business was transacted. Only one clerk was employed at this office, at a salary of $150 per annum. It also appeared that the business of the company, consisting of the transportation of produce and other property upon the Western Lakes and the Erie Canal was very large; that twenty clerks were employed at the office of the company in Buffalo; that the president, secretary and treasurer of the company resided there and did their business chiefly at that office; that the business done there annually amounted to several hundred thousand dollars; that full books of account of the business of the company were kept there; that money received at places west of Buffalo, after paying necessary disbursements, were remitted to the office at Buffalo; that the company had a large number of offices both east and west, at all of which except New York and Chicago, the business was much less than at Buffalo; that more money was received at Chicago and about twice as much at New York, as at Buffalo. It was shown also that the object of the company, in locating its principal office at Tonawanda, was to avoid taxation in the city of Buffalo.

The case turned upon the effect to be given to the certificate filed by the company as to the location of its principal office. Whether the place mentioned in the certificate as the place where its principal office was situated, should be considered conclusive, or whether other facts, as amount of business transacted in a given place, etc., should determine the result.

The opinion of the Court of Appeals omitting a statement of facts we have already given, is as follows:

SELDEN, J.—Under these circumstances it is evident, that unless the certificate filed pursuant to the statute, is conclusive upon the question of

location, if the matter is open to parol proof at all, it is established beyond controversy, that the principal office "for transacting the financial concerns of the company" is not at Tonawanda, but either at New York or Buffalo; probably the latter. The only question then is, in regard to the effect as evidence of the statement in the certificate. There are some considerations which seem to me decisive of this question. Unless the Legislature intended that the certificate should be conclusive, as to the location of the principal office, it is difficult to see any adequate motive for requiring the statement to be made. It is in no manner essential to the existence of a corporation that the place of its principal office should be fixed, or even that it should have any such office. We can, however, see obvious reasons why it is expedient that corporations should be deemed to have a location for certain purposes, among which is that of taxation; and that this should be definite and certain, and not subject to fluctuation or doubt. When the question is left open to parol proof, serious difficulties and embarrassments must often arise. What makes the office of a corporation its principal office? Is it the residence of its officers? or does it depend upon the amount of business done, or the number of clerks kept at a particular office? These and other like questions are of difficult solution where the question is left open and at large, and necessarily tend to produce controversies and litigation. To avoid disputes upon the subject, was, I apprehend, one motive for requiring the location to be fixed by the certificate. It is not important that a corporation should be taxed where it does the greatest amount of its business: but it is important that the place where it is liable to be taxed, should be known.

Another motive for the requirement in question, is shown by section 23 of the act of 1854, which requires the company to keep its stock books at the place designated in the certficate. This is for the convenience of the stockholders, and of persons dealing in the shares of the corporation. It is of very little consequence where such books are kept, whether where the other business of the company is principally done or not; it is only important that the place should be known and fixed.

Other considerations having the same tendency might be drawn from the various provisions of the act of 1854, and from contemporaneous legislation; but these are sufficient, I think, to show that the object of the Legislature, in requiring these corporations to designate the location of their principal office in the certificate filed, must have been to produce that certainty on the subject, which could not otherwise be obtained, and that the provision did not originate in any supposed necessity for having the "principal office" and the place of the principal business of the corporation identical.

The defendants' counsel seemed, upon the argument, to place much reliance upon the fact, that the motive of the company in placing its principal office at Tonawanda was to avoid taxation. But it is no more irrequitable or immoral for a corporation to do this, than for an individual to do substantially the same. A person may keep his office in Buffalo and transact business there to an unlimited amount and enjoying all the facilities and advantages which the enterprise and expenditures of the city have afforded, and yet by residing without the city bounds avoid all municipal taxation. When this shall be practised, either by individuals, or corporations, to an extent which renders it a serious evil, it will be for the Legislature to interfere. The judgment of the Supreme Court should be affirmed. All the judges concurred.

Railroad Connection with Delaware.

The Delaware Railroad has been completed to Salisbury, in Maryland, and next week the cars will commence running to that place. The work below there is going on, and it will not be long before a through connection is made via Norfolk to New Orleans. The Maryland and Delaware road is also in course of construction, which taps the Delaware road at Smyrna, and opens up the eastern shore of that State to the trade of Philadelphia and Wilmington. The work on the extension of the Junction and Breakwater road will also soon be resumed, and at no distant day the whole peninsula will be chequered with these important auxiliaries to our prosperity.—*Milford News and Advertiser, April 20th.*

Atlantic and Great Western Railroad--New York and St. Louis Broad Gauge Route.

This road, now in actual progress of construction and completion, is attracting no little attention. It is being built by three companies—one in Ohio, reaching from Dayton to the Pennsylvania State line, called "The Atlantic and Great Western Railroad Company *of* Pennsylvania;" and one in New York, reaching from the Pennsylvania State line to the New York and Erie road at the mouth of Little Valley Creek, and called "The Atlantic and Great Western Railroad Company *in* New York."

These different Companies, organized under charters granted by the above-named several States, are distinct from each other in name and organization, but have been consolidated, as far as is necessary or desirable, by mutual contracts between them, providing for the building, equipping, and running of the several divisions of the really one great road.

Marvin Kent is President of the Ohio road, and William Reynolds is President both of the Pennsylvania and New York roads; and in several instances the same gentleman are directors of each of the roads, and members of the Executive Committee Boards of each—thus insuring concert of action that could not otherwise be expected or obtained. The same contractors build the whole road from St. Louis to Little Valley.

During the last week meetings of the Boards of the Ohio and New York Companies have been held in Cleveland, which were also attended by the Directors of the Pennsylvania Company. At these meetings much important business was transacted.

Among other actions of peculiar interest to this vicinity, a resolution was passed to bring 1,100 tons of iron rail, now in this city of New York, to Ravenna, and lay it from this point west.

The work on the eastern end of the line is rapidly progressing, and is nearly ready for the iron, which is already on thn ground.

There is no doubt that by the middle of June next, that part of the line from the Erie road, some thirty two miles west, will be in running order, and soon after will be completed to the Sunbury and Erie road.

At the Cleveland meeting a committee was appointed, consisting of M. Kent, J. M. Coffinbury, and E. B. Taylor, to confer with the Cleveland and Pittsburg Railroad Company, and the Cleveland and Mahoning Railroad Company, in relation to a connection with one or both of said roads.

Contracts have long since been made with the New York and Erie Railroad, and those between Dayton and St. Louis, insuring a very favorable business connection with such roads.

Thus all things seemed to be working auspiciously for the speedy completion of this important railroad link, which, when completed, with its connections, will constitute the great railway thoroughfare of the country.—*Ravenna (Portage Co., Ohio,) Dem.*

Cincinnati, Hamilton and Dayton Railroad.

The annual meeting of the stockholders of this company was held in Cincinnati on the 1st inst. The following gentlemen were elected Directors for the ensuing year: Jas. B. Varnum, George Carlisle, S. S. L'Hommedieu, Samuel L'Hommedieu, Stanley Matthews, John W. Ellis, John C. Wright, Geo. H. Hill, and Wm. Becket.

The report of the company for the fiscal year ending March 31, 1860, was presented, from which we learn that the receipts during that time were:

From passengers	$226,498 20
" freight	287,922 96
" mails and express	19,482 97
" rent of track, etc.	19,930 67
" interest	6,009 66
" profit and loss	1,837 16
	$561,681 52

The expenses were:

Conducting transp'tation	$289,565 74	
Interest on bonds	97,899 73	
Taxes	10,958 13	
		398,423 60
Leaving as net earnings		$163,257 92
Out of which two dividends of 3½ per cent. each, have been paid		150,906 00
Leaving a surplus of		$12,351 92
Compared with the previous year, the gross earnings show an increase of		$72,243 60
And the expenses an increase of		53,708 90
Making the increase in net earnings		$18,534 70

The number of passengers carried during the year was 357,709—being an increase of 18,437.

The number of engines used by the company during the year was 22, and the total number of miles run, 374,124.

In reference to the contract recently made, the report says:

The contract recently concluded between the Little Miami and Columbus and Xenia; Dayton, Xenia and Belpre; and the Cincinnati, Hamilton and Dayton Railroad Companies, for working their several roads on joint account, for a period of twenty years, and which has been almost unanimously approved by the stockholders of the several companies, was put in operation on the second day of April, that day being the commencement of the fiscal year of this company.

The negotiations, which resulted in this important contract, commenced about two years since; and although occasionally suspended, it was with the expectation on the part of the several companies, of their being resumed at a suitable time. The parties realized the importance of proceeding with great care, in making a contract that should be alike beneficial to the stockholders of each company. It is believed that such a contract has been made, and that it will result advantageously to the several railroad companies directly interested, and to the railroads generally of our State.

The following is a comparative statement of the earnings for eight years ending March 31, 1860:

Years.	No. of Pass'rs.	Passenger Earnings.	Freight Earnings.
1852-'3	236,828	$191,700 93	$122,377 25
1853-'4	342,954	274,650 39	176,142 11
1854-'5	370,189	259,915 35	211,562 79
1855-'6	352,451	236,668 12	221,697 54
1856-'7	362,630	231,571 54	268,819 20
1857-'8	370,951	243,438 48	225,113 86
1858-'9	339,272	223,505 29	245,979 89
1859-'60	357,700	236,463 43	297,888 30

Years.	Mails and Express.	Totals.
1852–'3	$7,714 99	$321,793 17
1853–'4	12,228 95	463,021 45
1854–'5	12,142 34	483,620 48
1855–'6	13,620 04	471,885 70
1856–'7	17,943 21	518,333 95
1857–'8	18,868 93	487,421 27
1858–'9	17,617 95	487,103 74
1859–'60	19,482 97	561,682 52

CONDENSED BALANCE SHEET, MARCH 31ST, 1860.

Construction	$2,648,296 38
Equipment	504,892 35
Real Estate	266 356 45
Dayton and Western R. R. bonds	26,000 00
Dayton and Michigan bonds	12,800 00
Cin., H. & D. R. R. stock	2,247 26
Wood and material for repairs	41,475 43
Post Office Department	5,205 98
Bills receivable	48,425 25
Due from R. R. Cos.	32,933 60
Due from individuals	5,148 29
Cash in bank and on hand	164,218 25
Middletown Bridge stock	500 00
Total	$3,758,499 24
Capital stock	$2,155,800 00
First mortgage bonds, 1867	441,000 00
Second mort. bonds, 1880	950,000 00
Surplus earnings	12,351 92
Interest on bonds	24,150 00
Dividend No. 10	75,453 00
Dividends unpaid	2,798 65
Due Railroad Companies	74,889 21
Due individuals	7,585 71
Pay-roll, March	14,471 75
Total	$3,758,499 24

The only material change in these items from the report of 1859, is in cash, and cash items, the increase being $84,676.76.

The officers of the company for the ensuing year are:

President, S. S. L'HOMMEDIEU.
Vice President, GEO. CARLISLE.
Treasurer, LAFAYETTE BANKING CO.
Superintendent, D. MCLAREN.

Lynchburg Railroad Bridge.

We learn from the *Lynchburg Virginian* that the Orange and Alexandria Railroad Bridge, connecting the terminus of the road with Daniel's Island, is now ready for the cars, and that the road has commenced running two daily passenger trains between Lynchburg and Alexandria. Two daily trains are also run on the Virginia and Tennessee Railroad, making direct connections with the Alexandria road.

Tulpehocken and Swatara Railroad.

The Tulpehocken and Swatara Railroad, for which a charter was granted by the last Legislature, is designed to commence by connecting with the Lebanon Valley Railroad at Womelsdorf, in Berks county, and from thence in a direct and feasible route to Pinegrove, in Schuylkill county. The object purposed is to tunnel the Blue Mountain. There are two depressions or narrow passes in this mountain. One where the road from Pinegrove crosses to Millersburg, and the other where the road crosses from Pinegrove to Lebanon. Which of these will be the shortest route for the tunnel, must be determined by actual and careful survey. It is believed the length of the tunnel cannot succeed thirteen hundred yards, and may not be over eleven hundred. South of the Blue Mountain the road is to branch; one branch leading off the trade from Pinegrove to Womelsdorf, and the other in a direct and judicious route to Lebanon. It is believed that connections can be made with railroads already made at or near Pinegrove, which will insure a complete route to Tremont and all the important coal operations upon the Swatara and its tributaries. The distance from Pinegrove to Womelsdorf will probably be from eighteen to nineteen miles, and from Pinegrove to Lebanon sixteen or seventeen miles. The whole distance of the line, including both branches, will be from thirty to thirty-t womiles.—*Lebanon, Pa., Adv.*

Pacific Railroad.

We learn from Pettis county, that the people, in public meeting, have approved the proposition to appropriate $15,000 of county funds to the construction of the Pacific road between Otterville and Sedalia—all that was asked—and that the contractor, General PRICE, is making his arrangements to put on a full force to grade and prepare the road for the rails between Otterville and Sedalia.

We hear, also, that the people of Johnson county have determined to commence the work of grading and preparing the road bed from Sedalia to the country seat, (Warrensburg) without abandoning the work west of that town, and that it will be pushed forward as rapidly as possible.

There was a meeting of the Directors of the Lexington and St. Louis Railroad, on Saturday last, at Lexington, and the terms proposed by the main stem of the Pacific Road, relative to the transportation of passengers and freight, were accepted. It gives us great pleasure to be able to state that the Company have determined to commence this road immediately, and no one doubts the ability of the county to complete it. When this is done, Lexington will be brought within half a day's travel of us.—*St. Louis Rep.*

Millville and Glassboro' Railroad.

This road, which is twenty-two miles long, will not exceed in cost, ready for the cars, one hundred and sixty thousand dollars, or $7,272 per mile!—This sum includes all expenditures for right of way, engineering, graduation, bridges, ties and rails, in short everything except rolling stock. The Chief Engineer of this wonderful cheap road is George B. Roberts, Esq., who makes it a point, whilst caring for his personal reputation, also to care for the interests of stockholders. And hence Mr. Roberts builds a road to fit the country in which it is embedded, and to suit the trade which it is to accommodate, and depend on for support.

From Millville to Cape Island, a distance of 37 miles, the cost of a railroad will not exceed, it is said, the cost per mile of the road between Millville and Glassboro'. And the belief is expressed that this link will soon be put under contract, the citizens of Cape Island having raised a liberal subscription to its stock. With this link completed, and the West Jersey Railroad extended from Woodbury to Glassboro', the whole distance by railroad from Camden to Cape May, will be only seventy-seven miles, and the whole cost *less than ten thousand dollars per mile.*

From Glassboro' via Pittstown to Bridgeton, twenty miles, the West Jersey Railroad Company invite proposals for grading, to be opened in May, proximo.—*U. S. R. R. Mining Reg., April* 28th.

Memphis Branch of the Louisville and Nashville Road.

We learn from a creditable source that the iron for the Bowling Green branch of the Louisville and Nashville Railroad is arriving at Bowling Green, and the track laying will commence at the State line next week. This will be pushed forward in such manner as to complete it by next November at farthest. At the same time the iron has been and is now being landed at Bowling Green, Tennessee, for the Louisville and Memphis road. A track party will be sent next week to lay each way from Bowling Green, viz: towards Clarksville and towards the Tennessee river. Iron will soon be landed at the crossing of the Tennessee river, and in this manner the work will be pushed forward to completion. There is but about eight miles of the road between the State line and the Tennessee river (fifty-six miles) but what is graded, forty miles is already accepted by the commissioner, and eight miles from the Tennessee river this way has been graded for some time. The remaining eight will be finished soon, and by the first of June it is all—to the Tennessee river—expected to be ready for the examination of the Railroad Commissioner of Tennessee, whose duty it will be to issue State Bonds to the extent of ten thousand dollars per mile on the completed portion.—*Cin. Com., May* 4.

Quakake Railroad.

A bill passed the late session of the Pennsylvania Legislature, supplementary to the act incorporating the Quakake Railroad, authorizing the holders of the bonds of the company to convert them into preferred stock, to consist of 5,000 shares at $50 each. Also, authorizing the President and Directors of the company to issue in exchange to said bondholders certificates of such preferred stock for the par value of said bonds and coupons, including those to mature July 1st, 1860; the balance of 5,000 shares to be the property of the company, and to be disposed of for the general purposes of the company. The preferred stock will be entitled to a semi-annual dividend of 4 per cent., and no dividend will be paid on the common stock until all arrearages of the 8 per cent. for each year shall have been paid. At all future elections for officers of the company, the preferred and special stockholders shall elect the President and four Directors, and the common stockholder elect two Directors. This supplement, if carried out, it is believed, will enable the company to obtain the necessary means to extend their road from the present terminus, near the Summit Station, on the Catawissa road, into the Mahanoy coal field, as authorized by an act of Assembly, approved March 22d, 1859.

New York and Erie Railroad.

Perhaps there has never been a time in the history of the New York and Erie Railroad when the freighting business transacted by it was as large as it is at the present time. An unusual number of regular freight trains are employed, and frequently it becomes necessary to run extra trains. Everything connected with the Erie road gives signs of a reaction, and the rapid increase in the value of its stock is evidence that its present excellent management is having its legitimate effect. —*Hornellsville Tribune.*

Sunbury and Erie Railroad.

It is expected that operations will be continued on the Middle Division of the Sunbury and Erie Railroad during the Summer, with a somewhat diminished force. The affairs of the company are such as to render the completion of the road at the period originally contemplated—1st of November, 1860—an impossibility. The officers of the company, however, will leave no effort unemployed to have the work completed at the earliest possible time after the removal of the restrictions that now prevent an advantageous use of the company's resources.—*Phila., Inq.*

Texas and New Orleans Railroad.

We learn that the Texas and New Orleans Road is making excellent progress. The State Engineer has surveyed the first thirty miles, and reports the best road yet built in Texas. Contracts have been made with reliable parties for bridging the Trinity and San Jacinto rivers, the former with a draw bridge. The Galveston and Houston Road is doing a good business, the trains now run with regularity and despatch. The other roads are all well patronised. We learn that the materials for the bridge across the Brazos on the Washington County Road, are now arriving, and that the bridge will certainly be completed this summer. The interest taken in the Air Line extension of this road to Austin, is greatly increasing, and very large subscriptions are being made to the capital stock in the upper country. The work on the Fourth Section of the Central still progresses, and but a month or two will elapse before the road is opened to Millicans. An organization of the Houston and Tyler road has been effected at Huntsville, and the people of the Trinity valley are beginning to wake up to the

necessity of a railroad communication with the commercial centre of the State.—*Houston Telegraph.*

Tennessee and Alabama Railroad.

We learn that the President of the Alabama and Tennessee Rivers Railroad has made a trade for iron to clothe the road to Gadsden, subject to the ratification of the Board of Directors. This trade, if confirmed, will secure a speedy connection with Georgia and North Alabama. Our road will also soon become a thoroughfare, and the travel and freight that will find its way over it will astonish even the sanguine of its friends. In less than one year from the time the track is laid to Gadsden, we will be in full connection with the Georgia and Tennessee roads.—*Talladega Reporter.*

Cotton Factory in Carrollton, Miss.

The Carrollton (Miss.) *Democrat* says that "the stock is subscribed and the enterprise placed upon a sure footing. The amount required to be raised—$100,000—has been subscribed by ten men in equal shares of $10,000 each. The location is not, of course, definitely settled, but will be some practical point near Carrollton. This is right. It was the intention of the charter to place it in this vicinity. We shall notice the subject more at length at a future day."

Dubuque and Pacific Railroad.

The Supreme Court of the United States has reversed the decision of the Court below in the case of "Litchfield *agt.* The Dubuque and Pacific Railroad Company." By this decision the Des Moines River Improvement Land Grant is confirmed below Raccoon Fork, and about two hundred and fifty thousand acres of the best land in the State, are confirmed to three of the Land Grant Railroad Companies. A large proportion of this goes to the Dubuque and Pacific road, thereby making a very valuable addition to its resources, and giving still more security for its completion at an early day.—*Dubuque (Iowa) Herald.*

Camden and Amboy Railroad.

At a meeting of the stockholders of the Camden and Amboy Railroad and Transportation Company, held at Bordentown on the 28th ult., the following persons were unanimously re-elected Directors for the ensuing year:—Edwin A. Stevens, Benjamin Fish, John S. Livingston, John W. Mickle, John L, McKnight, William Cook, Joseph P. Bradley. At a subsequent meeting of the Directors the following officers were elected:—Edwin A. Stevens, *President;* James S. Green, *Treas'r.;* Samuel J. Bayard, *Secretary.*

Railroad Earnings.

We are informed that the gross receipts and disbursements of the La Crosse road for March, 1860, were as follows:

Receipts, eastern division	$32,264 76
Expenses, etc. do.	19,108 06
Receipts, western division	12,004 39
Expenses, etc. do.	10,725 44

The receipts of the Grand Trunk Railway of Canada for the week ending April 21,

were	$70,244 89
Week ending April 23, 1859	44,858 86
Increase	$25,386 03
Total traffic from July 1st, 1859	$2,340,862 38
Same period last year	1,854,419 81
Increase	$486,442 57

The earnings of the Michigan Central Railroad

for April, 1860, were	$165,741 03
April, 1859	143,143 30
Increase	$22,597 73

The earnings of the St. Louis, Alton and Chicago Railroad for April, 1860, were...$66,154 48
Corresponding month in 1859 ..... 52,441 00

Increase in 1860 ..... $12,713 48

The earnings of the Chicago and Northwestern Railroad for April were:

Passengers	$18,745 49
Freight	29,269 82
Mails and express	2,343 75
Total	$50,357 06
April, 1859	25,845 55
Increase	$24,511 41

The earnings of the Illinois Central Railroad for

April, 1860, were	$192,282
April, 1859	152,271
Gain	$40,011

The earnings of the Hudson River Railroad were:

April, 1860	$134,605 77
April, 1859	121,123 24
Increase	$13,482 53

The earnings of the Chicago, Burlington and Quincy Railroad in April were as follows:

	1859.	1860.
Freight	$68,699 93	$126,421 00
Passengers	56,466 93	44,845 03
Mails and miscellaneous	4,814 91	7,199 38
Totals (310 miles)	$129,981 77	$178,465 41
Increase		48,483 64

The traffic of the Great Western Railway of Canada for the week ending April 27, 1860, was as follows:

Passengers	$18,788 77
Freight and live stock	21,755 29
Mails and sundries	1,402 43
Total	$41,646 49
Corresponding week last year	36,384 56
Increase	$5,561 93

The details of the earnings of the Galena and Chicago Union Railroad for April are:

	1859.	1860.
Freight	$51,240 23	$62,788 64
Passengers	33,643 31	27,425 77
Mails, etc.	3,824 66	3,800 00
Total	$88,708 20	$94,014 42
Increase		$5,306 22
Corrected earn'gs for the previous m'th		80,793 07

The earnings of the New York and New Haven

Railroad for April, 1860, were	$101,437 58
Less due other roads	18,799 60
Balance	$82,637 98
Receipts, April, 1859	77,860 52
Increase	$4,777 46

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning), for April, 1860, compared with the same month of last year:

	1859.	1860.
Passengers	$11,490 20	$10,330 98
Freight	32,328 52	33,954 89
Other sources	1,686 86	1,686 86
Total	$45,505 58	$45,972 78

The earnings of the Cleveland and Toledo Railroad for Apil were $76,589
April, 1859 62,050
Increase $13,439

The earnings of the Chicago and Rock Island road in April, 1860, were $85,848
April, 1859 68,224
Gain $17,624

The increase in the last week was about $6,000.

The earnings of the New York Central Railroad

in April, 1860, were	$580,131 83
April, 1859	478,562 68
Increase	$101,569 20

The official statement of the earnings of the Michigan Southern road in April is as follows:

	1859.	1860.
Passengers	$67,922 29	$59,461 81
Freight	68,758 89	105,683 23
Mails	4,435 56	4,310 38
Express and miscellan.	4,141 65	24,540 14
Total	$145,258 39	$193,995 56
Increase		$48,737 17

The earnings of the Toledo and Wabash Railroad for April, 1860, were:

For passengers	$19,618 45
Freight	50,794 00
Mail and express	8,266 66
Total	$78,679 11
April, 1859	68,096 89
Increase	$5,582 22

The statement of the Illinois Central Railroad Company for April, 1860, is as follows:

Land Department.

3,048.05	acres sold for	$50,096 31.	
9,325.66	" "	since Jan. 1.	$149,015 88
